Note: Border price at farm gate, i.e. price net of marketing margins between border and farm gate.

Average of % changes in prices of commodities in national currency, weighted by the shares of each commodity Market Price Support (MPS) within the total MPS in the previous year.

The producer price change and the border price change are not calculated when the negative price gap occurs at the commodity level for the current or previous year.

1. EU27 and the United Kingdom for 2020; and EU27 for 2021.
2. The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.
3. The Market Price Differentials (MPD) for the United Kingdom are assumed equal to those of the European Union for the years until 2020, while they are calculated from UK domestic and reference prices from 2021. As a consequence, no decomposition of the Producer Support is presented.
4. Average of % changes in producer and border prices in OECD countries weighted by the value of national MPS within the total MPS of the OECD of the previous year.
5. Border price expressed in USD.
