ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT
ORGANISATION DE COOPÉRATION ET DE DÉVELOPPEMENT ÉCONOMIQUES

ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT

Pursuant to Article 1 of the Convention signed in Paris on 14th December 1960, and which came into force on 30th September 1961, the Organisation for Economic Co-operation and Development (OECD) shall promote policies designed:

- to achieve the highest sustainable economic growth and employment and a rising standard of living in member countries, while maintaining financial stability, and thus to contribute to the development of the world economy;
- to contribute to sound economic expansion in member as well as non-member countries in the process of economic development; and
- to contribute to the expansion of world trade on a multilateral, non-discriminatory basis in accordance with international obligations.

The original member countries of the OECD are Austria, Belgium, Canada, Denmark, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The following countries became members subsequently through accession at the dates indicated hereafter: Japan (28th April 1964), Finland (28th January 1969), Australia (7th June 1971), New Zealand (29th May 1973), Mexico (18th May 1994), the Czech Republic (21st December 1995), Hungary (7th May 1996), Poland (22nd November 1996), Korea (12th December 1996) and the Slovak Republic (14th December 2000). The Commission of the European Communities takes part in the work of the OECD (Article 13 of the OECD Convention).

ORGANISATION DE COOPÉRATION ET DE DÉVELOPPEMENT ÉCONOMIQUES

En vertu de l'article 1^{er} de la Convention signée le 14 décembre 1960, à Paris, et entrée en vigueur le 30 septembre 1961, l'Organisation de Coopération et de Développement Économiques (OCDE) a pour objectif de promouvoir des politiques visant :

- à réaliser la plus forte expansion de l'économie et de l'emploi et une progression du niveau de vie dans les pays membres, tout en maintenant la stabilité financière, et à contribuer ainsi au développement de l'économie mondiale ;
- à contribuer à une saine expansion économique dans les pays membres, ainsi que les pays non membres, en voie de développement économique ;
- à contribuer à l'expansion du commerce mondial sur une base multilatérale et non discriminatoire conformément aux obligations internationales.

Les pays membres originaires de l'OCDE sont : l'Allemagne, l'Autriche, la Belgique, le Canada, le Danemark, l'Espagne, les États-Unis, la France, la Grèce, l'Irlande, l'Italie, le Luxembourg, la Norvège, les Pays-Bas, le Portugal, le Royaume-Uni, la Suède, la Suisse et la Turquie. Les pays suivants sont ultérieurement devenus membres par adhésion aux dates indiquées ci-après : le Japon (28 avril 1964), la Finlande (28 janvier 1969), l'Australie (7 juin 1971), la Nouvelle-Zélande (29 mai 1973), le Mexique (18 mai 1994), la République tchèque (21 décembre 1995), la Hongrie (7 mai 1996), la Pologne (22 novembre 1996), la Corée (12 décembre 1996) et la République slovaque (14 décembre 2000). La Commission des Communautés européennes participe aux travaux de l'OCDE (article 13 de la Convention de l'OCDE).

Introduction – Introduction

This publication provides the most recent information available on key labour force indicators in 23 OECD Member countries. It contains a summary of more detailed information published in the annual *Labour Force Statistics* publication. Unless otherwise indicated the annual data shown in this publication are identical to those published in the latest edition of the annual publication which contains data for the years 1983-2003. Any differences are due to revisions.

This publication is also designed to complement other OECD Statistics Directorate monthly and quarterly publications that provide information on a wide range of short-term economic indicators for OECD Member countries. These publications are:

- *Monthly Statistics of Foreign Trade*
- *Main Economic Indicators* (monthly);
- *Quarterly National Accounts*

Main Economic Indicators also includes key short-term statistics for 6 non-member countries: Brazil, China, India, Indonesia, Russian Federation and South Africa.

Data comparability

This publication covers countries that compile labour force statistics on a monthly and quarterly basis. Notes are provided for each country at the end of Part One.

The standardised presentation of the tables does not imply that the statistics shown for the various countries are comparable. Although all of the countries in this publication largely adhere to International Labour Organisation (ILO) guidelines, there are differences between them with regard to some definitions, classifications and the methods used to collect the data.

La présente publication fournit les informations les plus récentes sur les principaux indicateurs de la population active pour 23 pays Membres de l'OCDE. Cette publication constitue un sous-ensemble des informations plus complètes publiées dans la publication annuelle *Statistiques de la population active*. Sauf indication contraire, les chiffres annuels mentionnés sont les mêmes que ceux qui figurent dans le dernier numéro de l'annuaire qui contient des données pour les années 1983-2003. Tous les écarts éventuels sont dus à des révisions.

Cette publication est aussi un complément des autres publications mensuelles et trimestrielles de la direction des statistiques de l'OCDE. Ces publications qui fournissent un large éventail d'indicateurs à court terme pour les pays Membres de l'OCDE sont:

- *Statistiques mensuelles du commerce extérieur*
- *Principaux indicateurs économiques* (mensuels);
- *Comptes nationaux trimestriels*;

Les *Principaux indicateurs économiques* présentent également les statistiques conjoncturelles clés pour 6 pays non membres de l'OCDE : l'Afrique du Sud, le Brésil, la Chine, l'Inde, l'Indonésie et la Fédération de Russie.

Comparabilité des données

La présente publication couvre principalement les pays qui établissent des statistiques de la population active à partir d'enquêtes mensuelles ou trimestrielles auprès des ménages. A la fin de la première partie, se trouvent des notes pour chacun des pays.

Le fait que les tableaux sont présentés sous une forme standardisée n'implique pas que les données relatives aux différents pays soient comparables. Bien que tous les pays de cette publication suivent dans une large mesure les recommandations du Bureau International du travail (BIT), il subsiste des différences au niveau de certaines définitions ainsi qu'au niveau des classifications et des moyens utilisés pour collecter les données.

For 20 of the 23 countries, data are derived from monthly or quarterly household labour force surveys. Statistics for the remaining three countries (France, Germany and Switzerland) are derived from the annual labour force surveys. International comparisons must therefore be approached with caution, particularly as regards unemployment and unemployment rates.

Unemployment rates

The unemployment rates shown in the country tables in Part **One** and which are derived from national sources are in general calculated with respect to the *total labour force*.

Part **Two** of this publication gives a set of Standardised Unemployment Rates for 27 OECD Member countries. These rates are calculated for men, women and the total of men and women. The rates are also calculated for the cited groups, where possible, by age: total; less than 25 years; more than 25 years. These rates show *unemployment* as a percentage of the *civilian labour force*. As both aggregates are defined according to standard ILO-OECD guidelines, these rates are comparable between countries. A description of the methodology used to compile these rates is provided in the *Technical notes* at the beginning of Part Two.

In the graphs for individual countries the standardised unemployment rate for each country is compared with standardised unemployment rates for OECD-total and EU15 country groupings. For the unemployment rate the composition of area totals are as follows:

Euro area: Austria, Belgium, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal and Spain.

EU15: All Euro area countries plus Denmark, Sweden and United Kingdom.

OECD-total: EU15 plus Australia, Canada, Czech Republic, Hungary, Japan, Korea, New Zealand, Norway, Poland, Slovak Republic, Switzerland and United States.

Major seven countries: Canada, France, Germany, Italy, Japan, United Kingdom and United States.

When the standardised unemployment rate is not available for a given country, the unemployment rates (total, males, females) published in the country tables are shown.

Standardised Unemployment Rates, for all periods, are also published monthly in the OECD's *Main Economic Indicators* publication and are available on Internet:

<http://www.oecd.org/statistics/news-releases>.

Pour 20 des 23 pays les données sont dérivées d'enquêtes sur la population active auprès des ménages mensuelles ou trimestrielles. Les données pour les trois pays restant (Allemagne, France, et Suisse) sont dérivées d'enquêtes sur la population active annuelles. En conséquence, il convient de faire montre d'une certaine prudence dans les comparaisons internationales, du chômage et du taux de chômage en particulier.

Taux de chômage

Les taux de chômage présentés dans les tableaux par pays de la **première** partie provenant directement des sources nationales sont établis en général sur la base de la *population active totale*.

Dans la **deuxième** partie de cette publication est présenté un ensemble de taux de chômage standardisés pour 27 pays Membres de l'OCDE. Ces taux sont calculés pour les hommes, les femmes et le total des hommes et des femmes. Les taux sont également calculés quand cela est possible pour chacun des groupes cités : total ; les moins de 25 ans ; les plus de 25 ans. Ces taux montrent le niveau du chômage en pourcentage de la *population active civile*. Les deux agrégats étant définis selon les lignes directrices BIT-OCDE, ces taux sont comparables entre pays. Une description de la méthode utilisée pour calculer ces taux est fournie dans les *Notes techniques* au début de la deuxième partie.

Dans les pages de graphiques de chaque pays, le taux de chômage standardisé dudit pays est mis en regard avec le taux de chômage standardisé pour les groupes de pays OCDE-total et EU15. Pour le taux de chômage standardisé, la composition des groupes de pays est:

Zone euro : Allemagne, Autriche, Belgique, Espagne, Finlande, France, Grèce, Irlande, Italie, Luxembourg, Pays-Bas et Portugal.

EU15 : Ensemble des pays de la Zone euro plus Danemark, Royaume-Uni et Suède.

OCDE-total : EU15 plus Australie, Canada, Corée, États-Unis, Hongrie, Japon, Norvège, Nouvelle-Zélande, Pologne, République slovaque, République tchèque et Suisse.

Sept grands pays : Allemagne, Canada, États-Unis, France, Italie, Japon et Royaume-Uni.

Lorsque le taux de chômage standardisé n'est pas disponible pour un pays donné, on a choisi de représenter graphiquement les taux de chômage (total, hommes, femmes) publiés dans les tableaux par pays.

Les taux de chômage standardisés pour l'ensemble des personnes sont aussi publiés mensuellement dans la publication de l'OCDE intitulée les *Principaux Indicateurs Economiques* et sont disponibles sur Internet :

<http://www.oecd.org/statistics/news-releases>.

Classification used

Employment data in this publication are classified according to the following three sectors, which are based on the International Standard Industrial Classification of all Economic Activities (ISIC), Revision 2, United Nations, 1968:

Agriculture: ISIC Major Division 1

1. Agriculture, hunting, forestry and fishing.

Industry: ISIC Major Divisions 2-5

2. Mining and quarrying.
3. Manufacturing.
4. Electricity, gas and water.
5. Construction.

Services: ISIC Major Divisions 6-9 plus 0

6. Wholesale and retail trade, restaurants and hotels.
7. Transport, storage and communications.
8. Financing, insurance, real estate and business services.
9. Community, social and personal services.
0. Activities not adequately defined.

Data presentation

The following points should be noted regarding statistical series presented in this publication:

1. Index numbers are shown with 2000=100, in conformity with international recommendations for a standard reference year.
2. Many series are shown in both seasonally adjusted and unadjusted form. In the tables and graphs seasonally adjusted data are indicated by **sa**. Where seasonally adjusted data are not available from national sources, seasonal adjustments are calculated by OECD using the X12-ARIMA Method of the US Bureau of the Census.
3. Youth unemployment is defined as unemployment of persons less than 25 years old. It is shown as percentage change over 4 quarters in the graphs and as a percentage of total unemployment in the tables.

Classification utilisée

Les données de l'emploi fournies dans cette publication sont ventilées entre les trois secteurs suivants, construits sur la base de la deuxième Révision, en date de 1968 de la Classification Internationale Type par Industrie de toutes les activités économiques (CITI) des Nations Unies :

Agriculture : Branche 1 de la CITI

1. Agriculture, chasse, sylviculture et pêche.

Industrie : Branche 2 à 5 de la CITI

2. Industries extractives.
3. Industries manufacturières.
4. Électricité, gaz et eau.
5. Bâtiments et travaux publics.

Services : Branches 6 à 9 et 0 de la CITI.

6. Commerce de gros et de détail ; restaurants et hôtels.
7. Transports, entrepôts et communications.
8. Banques, assurances, affaires immobilières et services fournis aux entreprises.
9. Services fournis à la collectivité, services sociaux et services personnels.
0. Activités mal désignées.

Présentation des données

A propos des séries statistiques présentées dans cette publication, les points suivants doivent être mentionnés.

1. Les indices sont exprimés sur la base 2000=100, ceci selon les recommandations de divers organismes internationaux visant à uniformiser la période de référence pour la publication des indices.
2. Bon nombre de séries sont présentées corrigées et non corrigées des variations saisonnières. Dans les tableaux et les graphiques les séries corrigées des variations saisonnières sont signalées avec l'abréviation **cvs**. Lorsque les séries corrigées ne sont pas fournies par les sources nationales, l'OCDE effectue le calcul au moyen de la méthode X12-ARIMA mise au point par le Bureau of the Census des États-Unis.
3. Le chômage des jeunes est défini comme le chômage des personnes âgées de moins de 25 ans. Il est présenté sous forme graphique avec la variation sur quatre trimestres et dans les tableaux en pourcentage du nombre total de chômeurs.

Feedback on Contents/Presentation of Data in this Publication

The OECD Statistics Directorate welcomes your comments on this publication and suggestions for improvement with respect to contents and presentation. Feedback may be provided by mail, fax or Internet as follows:

OECD Statistics Directorate
2, rue André Pascal
75775 PARIS Cedex 16
E-mail: stat.contact@oecd.org
Fax: 00 33 1 44 30 63 52

The OECD Statistics Directorate wishes to thank national statistical offices and other agencies in Member countries, without whose co-operation this publication could not have been produced.

Réactions sur le contenu et la présentation des données dans cette publication

La direction des Statistiques de l'OCDE serait heureuse de recevoir des commentaires sur cette publication ainsi que des suggestions pour l'amélioration du contenu et de la présentation. Les réactions peuvent être communiquées par courrier postal, par fac-similé ou encore par courrier électronique aux adresses suivantes :

Direction des Statistiques de l'OCDE

(1) There are minor breaks in the data between the last quarter of the year and the first quarter of the following year for 1996, 1997, 1998 and 2002. These are due to the introduction of revised population controls and other changes. Due to the inclusion of population controls based on the 2000 decennial census, there is a significant break in the data between the last

(2) quarter of 1999 and the first quarter of 2000. As data for Resident armed forces are unavailable from 2001, data for Total labour force and Unemployment rate (calculated with respect to the total labour force) are unavailable from 2001. However, the latest data for the Standardised Unemployment Rates (calculated with respect to the civilian

(3) labour force) are available in part Two. Due to the introduction of the 2002 Census industry classification system derived from the North American Industry Classification System (NAICS) into the Current Population Survey, there is a break in the data between the last quarter of 2002 and the first quarter of 2003.

(4) Figures refer to the Monthly payroll survey of industrial establishments classified according to the North American Industry Classification System (NAICS) 2002. Employees in agriculture and private domestic service are excluded from the survey. Quarterly data are monthly averages.

(1) Il y a des ruptures mineures dans les données entre le dernier trimestre de l'année et le premier trimestre de l'année suivante pour 1996, 1997, 1998 et 2002. Ces ruptures sont dues à l'introduction de révision des contrôles de population et autres changements. En raison de l'introduction de contrôles de population basés sur le recensement décennal de 2000, il y a une rupture significative dans les

(2) Les données des forces armées résidentes ne sont pas disponibles depuis 2001. Pour cette raison, les données de la population active totale et celles du taux de chômage calculé sur la base de la population active totale ne sont pas disponibles depuis 2001. Cependant, les données les plus récentes des taux de chômage

(3) standardisés (calculés sur la base de la population active civile) sont disponibles dans la deuxième partie. En raison de l'introduction dans l'Enquête sur la population (Current Population Survey), d'un système de classification de l'industrie (recensement de 2002) basé sur le système de classification type par industrie en Amérique du Nord (SCIAN), il y a une rupture dans les

(4) données entre le dernier trimestre de 2002 et le premier trimestre de 2003. Les données proviennent de l'enquête mensuelle auprès des établissements industriels classés suivant le système de classification type par industrie en Amérique du Nord (SCIAN) de 2002. Les salariés agricoles et le personnel domestique ne sont pas inclus dans l'enquête. Les données trimestrielles sont des moyennes mensuelles.

- (1) From 2002 data based on the quarterly labour force surveys are compiled in line with the 2001 population census. From 2004 they refer to private households only (Eurostat definition).
- (2) Data are derived from the quarterly

- (3) labour force surveys.
- (4) Data on registered unemployed are provided by the Labour Offices. Figures for Civilian employment include the Armed forces.

- (5) Series refer to social insurance statistics; quarterly data refer to the months of March, June, September and December. All figures include the Armed forces.
- (6) Annual data are monthly averages.

- (7) Unemployment rates based on the labour force surveys.

(1) Depuis 2002 les données provenant des enquêtes trimestrielles sur la population active sont basées sur des estimations de la population du recensement 2001. Depuis 2004 elles se réfèrent uniquement aux ménages privés (définition Eurostat).

(2) Données provenant de l'enquête trimestrielle sur la population active.
 (3) Ces données se réfèrent aux chômeurs enregistrés et sont établies par les Offices de l'emploi.
 (4) Les chiffres de l'Emploi civil comprennent les Forces armées.

(5) Les séries proviennent des statistiques des assurances sociales ; les données trimestrielles se réfèrent aux mois de mars, juin, septembre et décembre. Tous les chiffres incluent les Forces armées.
 (6) Moyennes annuelles de données

(7) mensuelles.
 Taux de chômage basés sur les données des enquêtes par sondage.

(1) Civilian employment figures include those members of the armed forces who are covered by the labour force

(2) survey, i.e. those living in households. Due to the nature of co-operatives in the Czech Republic, persons working in

this type of enterprise are included in the figures representing the numbers of employees (such workers are usually

classified as self-employed).

(1) Les données de l'emploi civil incluent les membres des forces armées couverts par l'enquête, c.à.d. ceux résidants dans les ménages.

(2) Du fait de la nature des coopératives dans la République tchèque, les personnes travaillant dans ce type d'entreprise sont incluses dans les

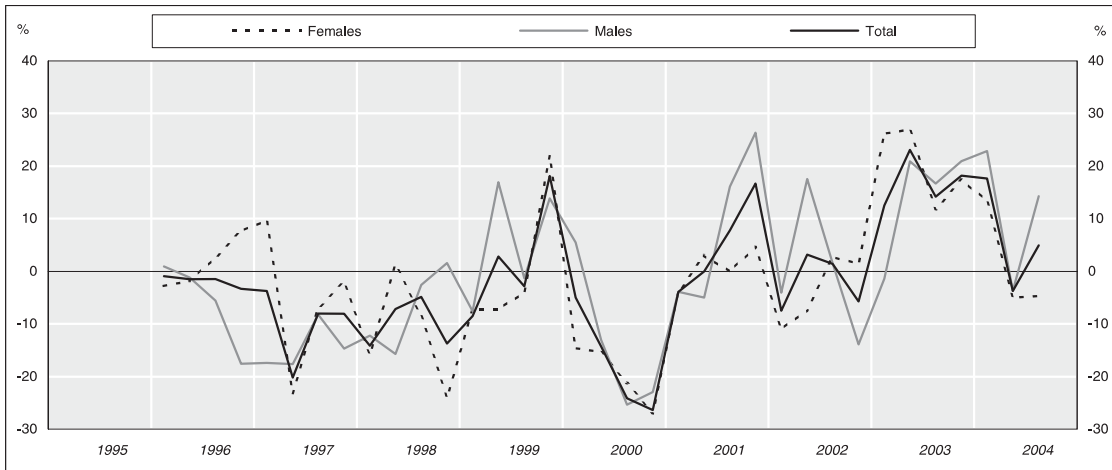

chiffres correspondant aux employés (alors qu'elles sont habituellement incluses dans les travailleurs indépendants).

(1) Figures for the unemployed on an annual basis have been provided by the Institut National de la Statistique et des Études Économiques and correspond to ILO's international definitions.

(2) Quarterly unemployment figures refer to job applicants still registered at the end of the months of March, June, September and December; they are established monthly by the Ministry of Labour for totals and age groups.

(3) These series have been repeatedly affected by the introduction of new administrative procedures. Data refer to all employees and not civilian employees only. Differences between the total and the sum of data

(4) for males and females stem from different release dates for these figures. Annual averages are moving averages calculated from the non-seasonally adjusted quarterly series.

(1) Les données annuelles du chômage, fournies directement par l'Institut national de la statistique et des études économiques sont estimées selon les définitions internationales du BIT.

(2) Les données trimestrielles du chômage se réfèrent aux Demandes d'emploi non

satisfaites à la fin des mois de mars, juin, septembre et décembre : ces séries sont établies mensuellement par le ministère du Travail pour les totaux et par groupes d'âge. Ces séries ont été sérieusement affectées au cours des années par l'application de

(3) procédures administratives importantes. Les données concernent l'ensemble des salaires et non uniquement les salaires du civil. La différence entre le total et la somme des hommes et des femmes provient d'un décalage dans la

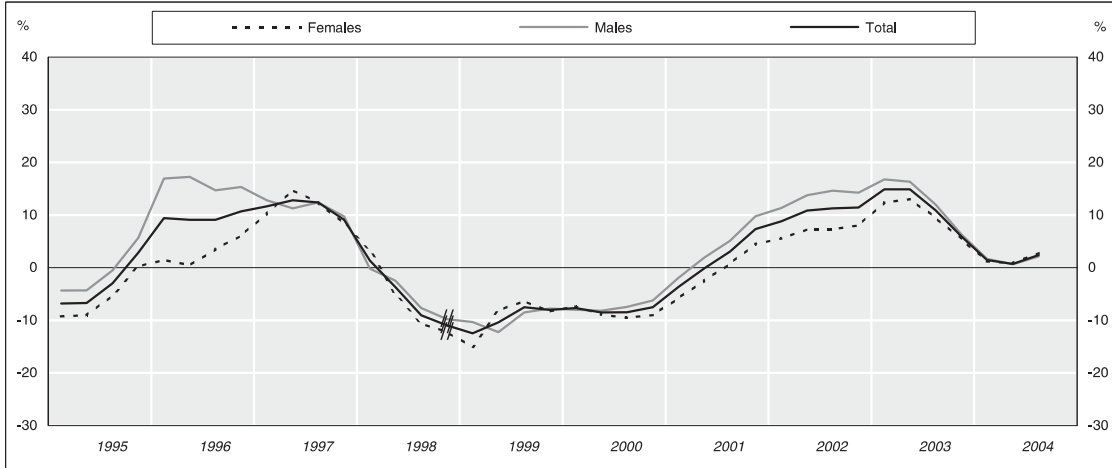

(4) disponibilité des données. Les moyennes annuelles sont des moyennes mobiles calculées à partir de la série trimestrielle brute.

(1) All employment figures exclude those on child-care leave. The duration and conditions of child-care leave are such that it is preferable to exclude this group from employment.

(2) Civilian employment and labour force figures include permanent members of the armed forces from the first quarter 1992 to the fourth quarter 1993. From the first quarter 1994 all members of

(3) the armed forces are excluded from the civilian figures. Due to the nature of co-operatives in Hungary, those working in this type of enterprise are included as employees

(such workers are usually classified as self-employed).

(1) Toutes les données de l'emploi excluent les personnes en congé parental. L'exclusion de l'emploi de ce groupe est rendue préférable par la durée et les conditions de ces congés

(2) parentaux. Toutes les données de l'emploi civil et de la population active incluent les forces armées du premier trimestre 1992 au quatrième trimestre 1993. A

(3) partir du premier trimestre 1994 tous les membres des forces armées sont exclus des données civiles. Du fait de la nature des coopératives en Hongrie, les personnes travaillant

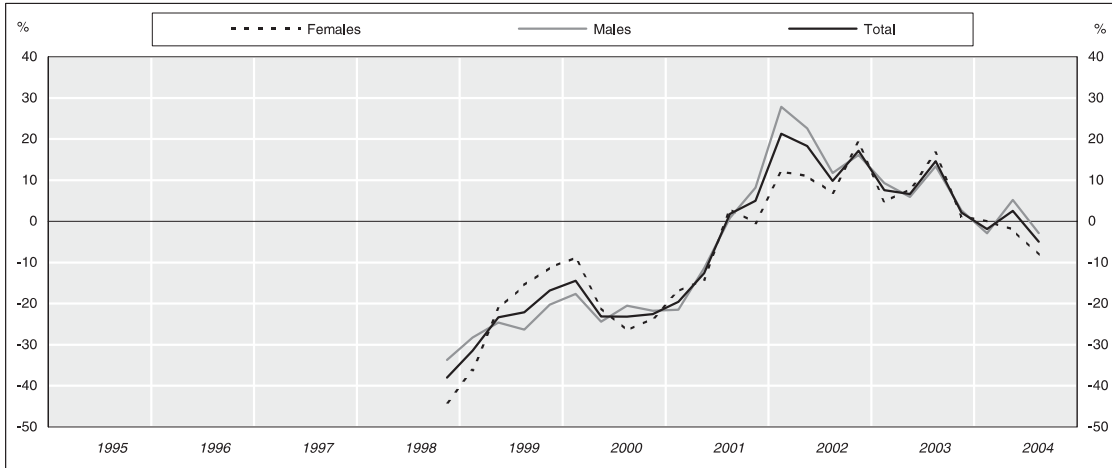

dans ce type d'entreprise sont incluses dans les chiffres correspondant aux employés (alors qu'elles sont habituellement incluses dans les travailleurs indépendants).

(1) Prior to 1996 data refer to mainland Portugal, from 1997 they refer to Portugal. From 1998 data are compiled in line with the 2001 population census.

(2) The seasonally adjusted series have been suppressed because the seasonal adjustments were not significant.

(1) Jusqu'à 1996 les données concernent le Portugal continental, à partir de 1997, elles concernent le Portugal dans son ensemble. A partir de 1998 les données sont basées sur des estimations de la population du recensement 2001.

(2) Les séries corrigées des variations saisonnières ont été supprimées parce que les ajustements saisonniers n'étaient pas significatifs.

(1) From the first quarter of 2002, Total Labour Force and Civilian Labour Force become equivalent, because persons on obligatory military service are no longer separately counted and are now included in the Civilian Labour Force.

(2) From first quarter 2001, the new unemployment definition established by the European Commission in 2000 has been introduced.

(1) Depuis le premier trimestre 2002, la Population active totale et la Population active civile sont équivalentes, parce que les personnes concernées par le service militaire obligatoire ne sont plus comptées séparément et sont désormais incluses dans la Population active civile.

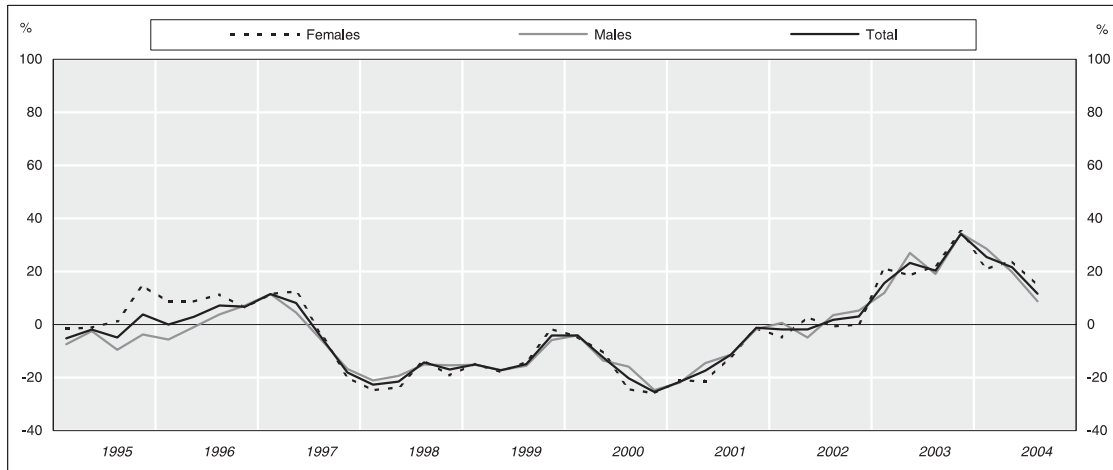

(2) À partir du premier trimestre 2001, la nouvelle définition du chômage établie par la Commission européenne en 2000 est appliquée.

(1) The break in series in 2002 reflects that Labour Force Survey estimates from the third quarter 2002 have been adjusted to take account of the Census 2001 results, while the previous quarters are in line with 1991 Census. Non-seasonally adjusted data on a similar basis will not be available before June 2004.

(2) The difference between Civilian employment and the sum by sector is due to non-response.

Country notes – Notes par pays

General remarks

The sources for all the series shown in this bulletin are identical to those given in the annual *Labour Force Statistics* Publication. Moreover, in order to complete many of the series, National Statistical Offices provide directly to OECD the appropriate data as well as the most recent revisions.

CANADA

Data for all series refer to the monthly labour force survey (households). The sample used represents all persons in the population aged 15 years and over. Quarterly figures are monthly averages.

Seasonally adjusted series for the major components of the labour force are national estimates. Those referring to the distribution of employment by sectors have been adjusted by the Secretariat.

UNITED STATES

Data for all series refer to the monthly labour force survey (households). The sample used represents all persons in the population aged 16 years and over. Yearly and quarterly figures are monthly averages. Seasonally adjusted series for the major components of the labour force are national estimates. Those referring to the distribution of employment by sector, have been established by the Secretariat.

Total Labour Force figures only include Resident Armed Forces. They differ from those published in the annual *Labour Force Statistics* publication, which include, in addition, military personnel serving overseas.

Due to the introduction of the 1990 population census results adjusted for an estimated undercount, data from 1990 forwards are not directly comparable with those of previous years. Due to a major redesign of the household survey, there is also a major break in the data in 1994.

Remarque générale

Les sources utilisées pour les séries publiées dans ce bulletin sont identiques à celles indiquées dans la publication annuelle *Statistiques de la population active*. Pour compléter plusieurs séries, les instituts statistiques nationaux fournissent directement à l'OCDE les données correspondantes ainsi que les révisions les plus récentes.

CANADA

Toutes les données proviennent de l'enquête mensuelle sur la population active (auprès des ménages). Le plan de sondage utilisé représente toutes les personnes âgées de 15 ans et plus. Les chiffres trimestriels sont des moyennes mensuelles.

Les séries corrigées des variations saisonnières relatives aux principales composantes de la population active sont calculées par les autorités nationales ; celles relatives à la distribution de l'emploi par secteur d'activité ont été établies par le Secrétariat.

ÉTATS-UNIS

Toutes les données proviennent de l'enquête mensuelle sur la population active (auprès des ménages). Le plan de sondage utilisé représente toutes les personnes âgées de 16 ans et plus. Les données annuelles et trimestrielles sont des moyennes mensuelles. Les séries corrigées des variations saisonnières relatives aux principales composantes de la population active sont calculées par les autorités nationales ; celles relatives à la distribution de l'emploi par secteur d'activité ont été établies par le Secrétariat.

Les données de la Population active totale ne comprennent que les forces armées résidentes à la différence des données correspondantes de la publication annuelle *Statistiques de la population active* qui incluent en plus les forces outre-mer.

En raison de l'introduction des résultats du recensement 1990 de la population, ajustés pour compenser une sous-évaluation précédente, les données depuis début 1990 ne sont pas directement comparables avec celles des années antérieures. En raison d'un réaménagement important de l'enquête auprès des ménages, il y a également une rupture importante dans les données en début 1994.

JAPAN

Data for all series refer to the monthly labour force survey (households). The sample used represents all persons in the population aged 15 years and over. Quarterly figures are monthly averages. Monthly data are rounded to the nearest ten thousand and the sum of the components may differ slightly from the corresponding total.

KOREA

Data for all series refer to the labour force survey (households) which started in August 1963 on a quarterly basis and from July 1982 on a monthly basis. The survey refers to all persons aged 15 years and over who usually reside within the territory of the Republic of Korea. The armed forces, auxiliary police, defence corps, institutional populations, population residing on islands and foreigners are excluded from the survey. The survey is conducted during one week each month. Yearly and quarterly data are averages of monthly data. Participation in the survey is compulsory. The size of the sample is 30 000 households. Employment includes those working without pay in a family business for 18 hours or more during the reference week.

Survey results are published by the National Statistical Office in the *Annual Report on the Economically Active Population Survey*.

AUSTRALIA

All data refer to the monthly labour force surveys. The sample used represents all persons in the population aged 15 years and over. Quarterly figures refer to the months of February, May, August and November. Since February 1978, the surveys have been conducted monthly, but since data for employed persons by industry are only available for February, May, August and November, the figures refer to the same months for the whole period shown. Yearly data for all series, from 1978, are averages of the months specified for each quarter.

JAPON

Toutes les données proviennent de l'enquête mensuelle sur la population active (auprès des ménages). Le plan de sondage utilisé représente toutes les personnes âgées de 15 ans et plus. Les données trimestrielles et annuelles sont des moyennes mensuelles ; les chiffres sont arrondis à la dizaine de milliers la plus proche et la somme des composantes peut différer légèrement du total indiqué.

COREE

Toutes les données proviennent de l'enquête sur la population active (auprès des ménages) qui a débuté sur une base trimestrielle en août 1963 et qui est mensuelle depuis juillet 1982. L'enquête concerne les personnes âgées de 15 ans et plus qui résident habituellement sur le territoire de la République de Corée. Les forces armées, le corps de policiers auxiliaires volontaires, les forces défensives, la population institutionnelle, la population vivant dans les îles et les étrangers sont exclus de l'enquête. L'enquête s'effectue sur une semaine chaque mois. Les données trimestrielles et annuelles sont des moyennes des données mensuelles. La participation à l'enquête est obligatoire. L'échantillon comprend 30 000 ménages. Les données de l'emploi comprennent les travailleurs familiaux non rémunérés qui ont un emploi pendant 18 heures et plus pendant la période de référence.

Les résultats des enquêtes sont publiés par l'Institut Statistique National dans la publication *Annual Report on the Economically Active Population Survey*.

AUSTRALIE

Toutes les données proviennent des enquêtes mensuelles sur la population active. Le plan de sondage représente toutes les personnes âgées de 15 ans et plus. Les données trimestrielles se réfèrent aux mois de février, mai, août et novembre. Depuis le mois de février 1978, l'enquête est devenue mensuelle ; par contre la distribution de l'emploi civil dans l'industrie est disponible seulement pour les mois de février, mai, août et novembre. Afin de maintenir la comparabilité des séries, le système pour les périodes précédentes des mois spécifiques est maintenu pour toute la période. Les moyennes annuelles, depuis 1978, pour toutes les séries, se réfèrent aussi aux mois spécifiques mentionnés ci-dessus.

NEW ZEALAND

Data for all series refer to the quarterly labour force survey carried out since the fourth quarter 1985. The sample used represents the usually resident civilian and non-institutional population of 15 years and over. The survey is carried out throughout each quarter and the statistics therefore reflect the average situation for the three month period. Employment and unemployment definitions are in line with the relevant international ILO Guidelines. The quarters are attributed to the months of March, June, September and December. Yearly data are their averages.

AUSTRIA

Data refer to the quarterly labour force surveys. The sample used represents all persons in the population aged 15 years and over. Quarterly figures refer to March, June, September and December. Beginning with the first quarter of 1994, all series are based on the new Labour Force Survey of the Mikrozensus, adapted to international definitions. Data for previous periods are not strictly comparable.

Two series for the unemployed are shown:

1. Data collected from the quarterly labour force surveys.
2. Data on registered unemployed are provided by the Labour Offices. Up to 1987, quarterly data for Total, Males and Females correspond to the same month as those of the labour force survey. The distribution by age-groups however was established only once a year in the month of August. As from 1987, these observations are monthly. As a result, from 1987 onwards, the yearly and quarterly data for all registered unemployment series are monthly averages.

CZECH REPUBLIC

Data for all series refer to the quarterly labour force survey (households). The survey covers all persons living in households continuously for at least three months, with the final results weighted by estimates of the frequency of the individual age groups for men and women from demographic projections. Labour market data refer to those aged 15 years and over. Data refer to the calendar year and quarters. All data shown are taken from the quarterly publication of labour force results by the Central Statistical Office of the Czech Republic.

NOUVELLE-ZÉLANDE

Les données pour toutes les séries proviennent de l'enquête trimestrielle sur la population active, menée depuis le quatrième trimestre 1985. L'échantillon utilisé représente la population civile et non institutionnelle de 15 ans et plus, habituellement résidente. L'enquête s'effectue durant toute la période de chaque trimestre. Les statistiques indiquent donc la situation moyenne des trois mois couverts. Emploi et chômage sont en ligne avec les définitions-type internationales du BIT. Les trimestres sont attribués au mois de mars, juin, septembre et décembre. Les données annuelles sont leurs moyennes.

AUTRICHE

Les données proviennent des enquêtes trimestrielles sur la population active. Le plan de sondage représente toutes les personnes âgées de 15 ans et plus, les données trimestrielles se réfèrent aux mois de mars, juin, septembre et décembre. A partir du premier trimestre 1994, toutes les séries proviennent de la nouvelle enquête sur l'emploi du Mikrozensus adaptée aux définitions internationales. Les données des périodes antérieures ne sont pas strictement comparables.

Deux séries de chômage sont indiquées :

1. Données provenant de l'enquête trimestrielle sur la population active.
2. Données sur les chômeurs enregistrés établies par les Offices de l'emploi. Jusqu'en 1987, les données trimestrielles des totaux, hommes et femmes, se réfèrent au même mois que celles de l'enquête. La distribution par tranches d'âge cependant n'était établie qu'une fois par an, au mois d'août. A partir de 1987, ces observations sont faites mensuellement. Depuis le premier trimestre 1987, les données trimestrielles et annuelles concernant toutes les séries du chômage enregistré sont donc des moyennes mensuelles.

RÉPUBLIQUE TCHÈQUE

Toutes les données proviennent de l'enquête trimestrielle sur la population active (auprès des ménages). L'enquête couvre toutes les personnes vivant dans le ménage de façon continue pendant au moins trois mois. Les résultats finaux sont pondérés à l'aide des estimations de la fréquence des groupes d'âge, hommes et femmes, dérivées des projections démographiques. Les données de la population active se réfèrent aux personnes âgées de 15 ans et plus. Les données correspondent à l'année civile et aux trimestre-calendriers. Toutes les données publiées proviennent de la publication trimestrielle des résultats de l'enquête de la population active de l'Office Central de Statistiques de la République tchèque.

The data in this issue have been revised and now reflect the calendar years and quarters for the entire period.

DENMARK

All data refer to a continuous survey covering both private and collective households. The entire country is covered by the survey, apart from Greenland and the Faroe Islands.

The sample size is 15 600 persons, which represent an average survey rate of 0.4%. It is drawn from persons aged between 15 and 66 years whose names appear in the population register and comprised 5 000 persons registered as unemployed during a quarter preceding the survey.

For the part of the sample comprising registered unemployed persons, stratification by age, income and level of educational attainment is carried out. For the remainder of the sample, the stratification is carried out on the basis of age, gross income and sector of activity.

Information is collected by means of CATI, supplemented by questionnaires sent by post to persons who could not be contacted by telephone.

FINLAND

Data for all series refer to the monthly labour force survey. The sample used (12 500 persons) represents all persons in the population aged 15 to 74 years and it is divided into five rotation groups, each containing 2 500 persons. Each rotation group is surveyed five times over a period of 15 months.

Until 2000, the data were collected for one week, generally the week containing the 15th day of the month. In 2000, a continuous survey week was introduced in the labour force survey.

Quarterly figures are monthly averages.

FRANCE

Data for all series have been provided by the national authorities and refer to metropolitan France. They have been compiled from various statistical sources, mainly the quarterly surveys of industrial and commercial establishments, the labour force surveys (the annual survey in March and experimental quarterly surveys in June, September and December) and the latest population census. Quarterly figures refer to the situation at the end of March, June, September and December.

Dans ce numéro les données ont été révisées et correspondent à présent à l'année civile et aux trimestre-calendriers sur toute la période.

DANEMARK

Toutes les données proviennent de l'enquête continue qui couvre les ménages privés et les ménages collectifs. Le pays entier est couvert par l'étude à l'exception du Groenland et des Iles Féroé.

La taille de l'échantillon est de 15 600 personnes, ce qui représente un taux de sondage moyen de 0.4%. Cet échantillon est créé à partir du Registre de population parmi les personnes âgées de 15 à 66 ans et comprend 5 000 personnes enregistrées comme chômeurs lors d'un trimestre précédant l'enquête.

Pour la partie de l'échantillon constituée de chômeurs enregistrés, il est effectué une stratification selon l'âge, le revenu et le niveau de l'éducation. Pour le reste de l'échantillon, la stratification est faite en utilisant l'âge, le revenu brut et le secteur d'activité.

L'information est collectée grâce à des entretiens téléphoniques assistés par ordinateur (système CATI), complétée par des questionnaires envoyés par la poste pour ceux qui n'ont pas pu être contactés par téléphone.

FINLANDE

Toutes les données proviennent de l'enquête mensuelle de la population active. Le plan de sondage utilisé (12 500 personnes) représente toutes les personnes âgées de 15 à 74 ans et il est divisé en cinq groupes de rotation de 2 500 personnes chacun. Chaque groupe de rotation est sondé cinq fois sur une période de 15 mois.

Jusqu'en 2000, les données étaient collectées sur une semaine, généralement celle contenant le 15ème jour du mois. En 2000, une semaine d'enquête continue a été introduite dans l'enquête de la population active.

Les données trimestrielles sont des moyennes mensuelles.

FRANCE

Les données pour toutes les séries sont fournies par les autorités nationales et concerne la France métropolitaine. Elles ont été établies d'après de nombreuses sources statistiques, notamment les enquêtes trimestrielles auprès des établissements industriels et commerciaux, les enquêtes sur l'emploi (enquête annuelle en mars et enquêtes trimestrielles expérimentales en juin, septembre et décembre) et les résultats du dernier recensement (utilisés comme base de référence). Les données trimestrielles se réfèrent à la fin des mois de mars, juin, septembre et décembre.

GERMANY

Data for all series are provided by the Statistisches Bundesamt. Since 1984 yearly and quarterly averages of all series, including unemployment by sex and age groups, are derived from the annual EU-labour force benchmark survey.

Beginning with the first quarter of 1991, data refer to Germany (Federal Republic of Germany after unification of Germany). Prior to 1991 data refer to western Germany (Federal Republic of Germany before unification of Germany).

HUNGARY

Data for all series refer to the quarterly labour force survey (households), the results of which are available from the first quarter of 1992. The sample used is compiled from dwellings registered by the 1990 Population Census and represents all persons in the population aged 15 to 74 years. From 1998, new sample design. The size of the survey was expanded from 24 000 to 39 000 households (50 000 to 64 000 persons). Each household is retained for six consecutive quarters.

IRELAND

Data for all series refer to the Quarterly National Household Survey, the results of which are available from the third quarter of 1997 replacing the annual April Labour Force Survey. Information is collected continuously throughout the year, with 3000 households surveyed each week to give a total sample of 39 000 households in each quarter. The reference quarters for survey results are Q1: December to February, Q2: March to May, Q3: June to August and Q4: September to November. The sample represents all persons in the population aged 15 years and over. A two-stage sample design is used. Households are asked to take part in the survey for five consecutive quarters and are then replaced by other households in the same block. The survey results are weighted to agree with population estimates broken down by age, sex and region.

ALLEMAGNE

Les données pour toutes les séries sont fournies par le Statistisches Bundesamt. Depuis 1984, les moyennes annuelles et trimestrielles de toutes les séries, y compris celles du chômage par sexe et groupes d'âge, sont dérivées de l'enquête annuelle-UE de l'emploi.

A partir du premier trimestre 1991, les données se réfèrent à l'Allemagne (République fédérale d'Allemagne depuis l'unification de l'Allemagne). Les données antérieures au premier trimestre 1991 se réfèrent à l'Allemagne occidentale (République fédérale d'Allemagne avant l'unification de l'Allemagne).

HONGRIE

Toutes les données proviennent de l'enquête trimestrielle sur la population active (auprès des ménages) dont les résultats sont disponibles depuis le premier trimestre 1992. Le plan de sondage utilisé est constitué à partir des habitations dénombrées par le recensement de la population de 1990 et représente toutes les personnes âgées de 15 à 74 ans. A partir de 1998, nouveau plan de sondage. La taille de l'enquête passe de 24 000 à 39 000 ménages (de 50 000 à 64 000 personnes). Chaque ménage reste dans l'enquête six trimestres consécutifs.

IRLANDE

Toutes les données proviennent de l'enquête nationale trimestrielle auprès des ménages dont les résultats sont disponibles à partir du troisième trimestre de 1997. Les informations sont collectées de manière continue tout au long de l'année, 3000 ménages étant sondés chaque semaine, pour obtenir un échantillon total de 39 000 ménages au cours de chaque trimestre. Les trimestres auxquels se réfèrent ces résultats sont T1: de décembre à février, T2: de mars à mai, T3: de juin à août et T4: de septembre à novembre. L'échantillon représente l'ensemble de la population âgée de 15 ans et plus. Un échantillon à deux niveaux est utilisé. Il est demandé aux ménages de participer à l'enquête pendant 5 trimestres consécutifs. Ils sont ensuite remplacés par d'autres ménages issus du même pâté de maisons. Les résultats de l'enquête sont pondérés afin de respecter la cohérence avec la structure par âge, sexe et région de la population.

ITALY

Data for all series refer to the quarterly labour force surveys (households). The sample used represents all persons in the population aged 14 years and over until the third quarter of 1992, and 15 years and over afterwards. Quarterly data refer to January, April, July and October. Due to changes in definitions and procedures used in the survey, data from 1993 onwards are not comparable with previous periods.

The Italian authorities (ISTAT) have introduced major changes to some series. Estimates of permanent inmates of institutions, previously excluded from the quarterly surveys, have been included in Population and Labour Force data. Consequently, all data are based on the concept Resident Population. Persons considered as having temporarily emigrated, however, are excluded.

NORWAY

Data for all series refer to the quarterly labour force surveys which started in 1972. The sample used represents all persons in the population aged 16 to 74 years. The sample consisted of about 12 000 persons up to the second quarter of 1988. It was then gradually expanded. Since the third quarter of 1990, the sample consists of about 24 000 persons. Quarterly data refer to February, May, August and November. From the second quarter of 1988, the quarterly figures are monthly averages.

In 1996, the survey was redesigned. The survey is now carried out throughout each quarter. The unemployment definition includes availability for work within two weeks following the interview. A new sample design and a change in estimation procedure have been introduced.

POLAND

Data for all series refer to the quarterly labour force survey (households) which started in May 1992. The survey refers to the non-institutional population and covers all persons living in households continuously for at least two months. Prior to the second quarter 1999, the survey was conducted during one week each quarter in February, May, August and November. From fourth quarter 1999, the survey is conducted continuously throughout the year. In February 1996, the size of the sample was 22 100 households, i.e. 55 000 persons. The labour force data refer to those aged 15 years and more. Employment data includes persons taking between four and six months maternity leave. Survey results are published by the Central Statistics Office (GUS) in the quarterly publication *Labour Force Survey in Poland*.

ITALIE

Les données pour toutes les séries proviennent de l'enquête trimestrielle par sondage sur la population active. Le plan de sondage représente toutes les personnes âgées de 14 ans et plus jusqu'au troisième trimestre de 1992 et de 15 ans et plus par la suite. Les données trimestrielles se réfèrent aux mois de janvier, avril, juillet et octobre. Par suite de changements de définitions et procédures de l'enquête, à partir de 1993, les données ne sont pas comparables avec celles des périodes antérieures.

Des modifications importantes ont été introduites par les autorités italiennes (ISTAT) dans certaines séries. Des estimations concernant les membres permanents des institutions, auparavant exclus de l'enquête trimestrielle, ont été ajoutées aux chiffres de la Population totale et de la Population active. En conséquence, les données publiées se réfèrent au concept de la Population résidente, les personnes temporairement émigrées en étant exclues.

NORVÈGE

Les données pour toutes les séries proviennent des enquêtes trimestrielles sur la population active qui ont débuté en 1972. Le plan de sondage utilisé représente toutes les personnes âgées de 16 à 74 ans. L'échantillon, jusqu'au deuxième trimestre 1988, comprenait 12 000 personnes et fut augmenté graduellement. Depuis le troisième trimestre 1990, il comprend 24 000 personnes. Les données trimestrielles se réfèrent aux mois de février, mai, août et novembre. Depuis le deuxième trimestre 1988, elles sont des moyennes mensuelles.

En 1996, l'enquête a été modifiée. L'enquête est dorénavant répartie sur l'ensemble de la période de chaque trimestre. La définition du chômage comprend la disponibilité à travailler dans les deux semaines qui suivent l'entrevue. L'échantillon et la procédure d'estimation sont également modifiés.

POLOGNE

Toutes les données proviennent de l'enquête trimestrielle sur la population active (auprès des ménages) qui a débuté en mai 1992. L'enquête concerne la population non institutionnelle et couvre toutes les personnes vivant dans le ménage de façon continue pendant au moins deux mois. Jusqu'au deuxième trimestre 1999, l'enquête a été effectuée sur une semaine chaque trimestre en février, mai, août et novembre. À partir du quatrième trimestre de 1999, l'enquête est conduite de manière continue tout au long de l'année. En février 1996, l'échantillon comprenait 22 100 ménages soit 55 000 personnes. Les données de la population active se réfèrent aux personnes âgées de 15 ans et plus. Les données de l'emploi incluent les personnes en congé de maternité pour une durée de quatre à six mois. Les résultats des enquêtes sont publiés par l'Office Central de Statistiques (GUS) dans la publication trimestrielle *Labour Force Survey in Poland*.

PORTUGAL

All data refer to the quarterly labour force surveys, starting with the second quarter 1983. Figures for previous years (not shown in this bulletin) were computed on a half-yearly basis. End of year estimates for those years are shown in the annual publication *Labour Force Statistics*. Due to revisions introduced in 1983, annual data for previous periods are not comparable.

The sample used until 1991 represents all persons in the population aged 12 years and over. Persons aged 12 to 14 years in the labour force were about 80 000 in the 4th quarter 1983 and about 51 000 in the same quarter 1986. Since 1992, it represents only persons of 14 years and over only, and since 1998, 15 years and over.

Quarterly figures refer to February, May, August and November. The survey is conducted during a four to five week period within the reference period. Since 1998, the survey is carried out throughout the quarter. Annual data are averages of quarterly data.

Data since 1998 are based on the results of the 2001 census, data from 1992 to 1997 are based on the results of the 1991 census.

A new definition of unemployment according to international guidelines was introduced from 1992.

SLOVAK REPUBLIC

Data are supplied by the Statistical Office of the Slovak Republic. They are derived from the quarterly Labour Force Sample Survey which began in 1993.

The Survey is based on a random sample of dwellings from all districts of the Slovak Republic. It covers 10250 dwellings representing 0.6 per cent of all permanently occupied dwellings. All persons aged 15 and over are covered, except the population living in institutions. Households are retained for 5 consecutive quarters. The survey data for persons who were willing to co-operate is then weighted by post-stratification using demographic data on population by region, gender and age group.

Until 1999 the reference quarters for the survey results were December to February for the first quarter, March to May for the second quarter, June to August for the third quarter and September to November for the fourth quarter. From the first quarter of 2000 the reference period has been the calendar quarter.

Data are considered final on first release and are not normally subject to revision.

PORTUGAL

Toutes les données proviennent des enquêtes trimestrielles sur la population active depuis le deuxième trimestre 1983. Les chiffres pour les années antérieures (non publiés dans ce bulletin) ont été établis sur une base semestrielle. Les estimations en fin d'année sont indiquées dans la publication annuelle *Statistiques de la population active*. En raison des révisions introduites en 1983, les données (annuelles) pour les périodes antérieures ne sont pas comparables.

Le plan de sondage a représenté jusqu'en 1991 toutes les personnes âgées de 12 ans et plus. Le groupe d'âge de 12 à 14 ans comptait environ 80 000 personnes au quatrième trimestre 1983 et 51 000 personnes au même trimestre de 1986. Depuis 1992, il ne représente que les personnes de 14 ans et plus, et depuis 1998, 15 ans et plus.

Les données trimestrielles se réfèrent aux mois de février, mai, août et novembre. L'enquête est effectuée durant 4/5 semaines de la période de référence. Depuis 1998, l'enquête est répartie sur l'ensemble de la période de chaque trimestre. Les données annuelles sont les moyennes des données trimestrielles.

Les données depuis 1998 sont basées sur les résultats du recensement de 2001, les données de 1992 à 1997 sont basées sur les résultats du recensement de 1991.

Nouvelle définition du chômage alignée sur les critères internationaux, depuis 1992.

RÉPUBLIQUE SLOVAQUE

Les données sont fournies par le Bureau statistique de la République slovaque. Elles sont dérivées de l'enquête trimestrielle par échantillonnage de la population active qui a commencé en 1993.

L'enquête est basée sur un échantillon aléatoire de logements de toutes les zones de la République slovaque. Elle couvre 10250 logements représentant 0.6 pour cent de tous les logements occupés de manière permanente. Toutes les personnes de 15 ans et plus sont concernées, à l'exception de la population vivant dans les institutions. Les ménages restent 5 trimestres consécutifs dans l'échantillon. Les données d'enquête pour les personnes disposées à participer sont pondérées en utilisant la stratification à partir des données démographiques sur la population par région, genre et catégorie d'âge.

Jusqu'en 1999, les trimestres de référence correspondent à la période de décembre à février pour le premier trimestre, de mars à mai pour le deuxième trimestre, de juin à août pour le troisième trimestre et de septembre à novembre pour le quatrième trimestre. A partir du premier trimestre 2000, la période de référence correspond au trimestre du calendrier civil.

Les données sont considérées comme définitives dès la première version et ne font normalement pas l'objet de révision.

SPAIN

Data for all series refer to the quarterly labour force survey. The sample used (about 240 000 persons) represents all persons aged 16 years and over. The series are transmitted by the Spanish authorities. Quarterly data have been provided only since the third quarter of 1972. The survey is carried out throughout the quarter. The figures represent an average estimate of the employment situation for the period under consideration. Complementary estimates of “permanent inmates of institutions”, as well as for the provinces Ceuta and Melilla are added to the survey results.

The Active Population Survey has been modified in 2002. Three methodological changes have been introduced. The population figures used for the projections have been revised from 1996-2001 to compensate for an immigration undercount. Age group weights have been revised for the period 1976-2001 to improve estimates concerning the 25-45 years group. From the first quarter 2001, the new unemployment definition established by the European Commission in 2000 has been introduced.

SWEDEN

Data for all series refer to the monthly labour force surveys. Since 1986 the sample represents all persons in the population aged 16-64 years. Previously, the age limits were 16-74 years. Quarterly figures are monthly averages.

SWITZERLAND

Data for all series are provided by the Swiss Federal Statistical Office (OFS).

Since 1991 a new estimation procedure has been applied for employment series based on the Labour Force Survey and the central register of foreigners. A benchmark is calculated for the middle of each year. Between benchmarks, definitive quarterly values are derived from employment statistics. Until the next benchmark becomes available, preliminary quarterly values are estimated.

This new calculation method necessitated a retrospective adjustment to the series from 1985, in order to prevent a break in the series.

ESPAGNE

Toutes les données proviennent de l'enquête trimestrielle sur la population active. Le plan de sondage utilisé (240 000 personnes environ) représente toutes les personnes âgées de 16 ans et plus. Les séries sont transmises par les autorités espagnoles. Les données trimestrielles ne sont disponibles qu'à partir du troisième trimestre 1972. L'enquête est répartie sur l'ensemble de la période de chaque trimestre ; les données représentent une estimation moyenne de la situation de l'emploi au cours de la période considérée. Aux résultats de l'enquête sont ajoutées des estimations relatives aux membres des communautés (ménages collectifs) ainsi que des estimations concernant les provinces Ceuta et Melilla.

L'Enquête sur la population active a été modifiée en 2002. Trois changements méthodologiques ont été introduits. Les chiffres de population utilisés pour les projections ont été révisés pour la période 1996-2001 pour corriger une sous-évaluation de l'immigration. La pondération des groupes d'âge a été revue pour la période 1976-2001 pour améliorer les estimations du groupe 25-45 ans. Enfin à partir du premier trimestre 2001, la nouvelle définition du chômage établie par la Commission européenne en 2000 est appliquée.

SUÈDE

Les données pour toutes les séries proviennent de l'enquête mensuelle sur la population active. Depuis 1986, le plan de sondage représente toutes les personnes de 16 à 64 ans. Jusqu'au premier trimestre 1986, il représentait les personnes de 16 à 74 ans. Les chiffres trimestriels sont des moyennes mensuelles.

SUISSE

Les données pour toutes les séries proviennent de l'Office fédéral de la statistique (OFS).

La nouvelle méthode d'estimation des séries d'emploi introduite en 1991 utilise comme sources principales l'enquête suisse sur la population active et le registre central des étrangers. Une valeur de référence est déterminée pour le milieu de chaque année. Entre les valeurs de référence sont calculées des valeurs trimestrielles définitives à l'aide de la statistique de l'emploi. Des valeurs trimestrielles provisoires sont estimées jusqu'à ce que la valeur de référence de l'année suivante ait été déterminée.

L'introduction de la nouvelle méthode de calcul a rendu nécessaire un ajustement rétrospectif de la série à partir de 1985 afin d'éviter une rupture dans la série.

UNITED KINGDOM

Until 1991, data were provided by the Department of Employment. They are derived from the Census of Employment, the General Household Survey (annual), the Labour Force Survey (annual) and the Employment Survey (quarterly). Seasonally adjusted figures for all series shown have been compiled by the national authorities. Annual data refer to June; quarterly data refer to the months of March, June, September and December, with the exception of unemployment by age. The Labour Force Survey was carried out every two years from 1973 to 1983 and on an annual basis from 1984 to 1991.

Since 1992, data for all series are provided by the Office for National Statistics (ONS) and refer to the quarterly Labour Force Survey. The survey includes all persons aged 16 years and over living in private households or National Health Service accommodation. The survey is conducted continuously throughout the year. In any three-month period, 120 000 people in around 61 000 households are interviewed. In this publication the quarterly results cover the following periods: Q1 = spring (March-May) Q2 = summer (June-August) Q3 = autumn (September-November) Q4 = winter (December-February).

Quarterly labour force data are regularly regressed. In June 2002, they have been regressed from third quarter 1998 and are not strictly comparable with earlier data.

ROYAUME-UNI

Jusqu'à 1991, les données fournies par le Department of Employment sont dérivées du recensement de l'emploi, de l'enquête annuelle auprès des ménages, de l'enquête annuelle sur la population active et de l'enquête trimestrielle sur l'emploi. Les chiffres corrigés des variations saisonnières sont établis par les autorités nationales pour toutes les séries. Les données annuelles se réfèrent au mois de juin ; les données trimestrielles se réfèrent aux mois de mars, juin, septembre et décembre, à l'exception de la répartition du chômage par groupes d'âge. L'enquête sur la population active était effectuée tous les deux ans de 1973 à 1983 et sur une base annuelle de 1984 à 1991.

A partir de 1992, les données sont fournies par l'Office for National Statistics (ONS) et proviennent de l'enquête trimestrielle sur la population active. L'enquête comprend toutes les personnes âgées de 16 ans et plus, vivant au sein de ménages privés ou des logements "National Health Service". L'enquête est conduite de manière continue tout au long de l'année. Au cours de chaque période de trois mois, 120 000 personnes dans environ 61 000 ménages sont interrogées. Dans cette publication, les résultats trimestriels couvrent les périodes suivantes : T1 = printemps (mars-mai) T2 = été (juin-août) T3 = automne (septembre-novembre) T4 = hiver (décembre-février).

Régulièrement, les données provenant des enquêtes de la population active sont extrapolées à nouveau. En juin 2002, les données ont été extrapolées à nouveau à compter du troisième trimestre 1998 et ne sont pas strictement comparables aux données antérieures.

Part 2
Partie 2

Standardised unemployment rates
Taux de chômage standardisés

Standardised unemployment rates

Taux de chômage standardisés

Technical notes

This section contains Standardised Unemployment Rates which are more comparable between countries than the unemployment rates published in national sources. In the past, these rates were calculated by the OECD based on data received from Member countries. Now, OECD publishes in this section the “comparable” unemployment rates produced by the Statistical Office of the European Communities (Eurostat) for all their Member States plus Norway. The OECD is responsible for the collection of data and calculation of standardised unemployment rates for the other OECD Member countries.

The standardised rate gives the number of unemployed persons as a percentage of the civilian labour force. The definition of unemployment conforms with the definition adopted by the 13th Conference of Labour Statisticians, which are generally referred to as the ILO Guidelines. The same is true for the definition of labour force, except that Eurostat uses estimates that are based on labour force surveys covering only private households. The OECD has also adopted this approach for the other OECD Member countries.

According to the ILO Guidelines, the labour force to be used to calculate the unemployment rate is the total labour force which consists of civilian employees, the self-employed, unpaid family workers, professional and conscripted members of the armed forces, and the unemployed. The use of survey data covering only private households implies a departure from this definition in that individuals living in institutions are excluded from estimates. For example, members of the armed forces living in barracks are excluded.

Standardised Unemployment Rates are also published monthly in the OECD’s Main Economic Indicators publication and are available on the Internet : <http://www.oecd.org/statistics/news-releases>.

Notes techniques

Dans cette section figurent les taux de chômage standardisés qui sont plus comparables d’un pays à l’autre que ne le sont les taux de chômage publiés dans les sources nationales. Dans le passé, ces taux étaient calculés par l’OCDE à partir de données reçues des pays Membres. Maintenant, l’OCDE publie dans cette section pour les pays de l’Union européenne ainsi que la Norvège les taux de chômage “comparables” calculés par l’Office statistique des Communautés européennes (Eurostat). L’OCDE est responsable de la collecte des données et du calcul des taux de chômage standardisés pour les autres pays Membres de l’OCDE.

Les taux de chômage standardisés désignent le pourcentage de chômeurs par rapport à la population active civile. La définition du chômeur correspond à celle qui a été adoptée par la 13ème Conférence des statisticiens du travail et à laquelle on fait référence comme directives du BIT. Il en est de même pour la définition de la population active à une exception près: les estimations d’Eurostat proviennent d’enquêtes sur la population active qui ne concernent que les ménages privés. L’OCDE a adopté cette approche pour les autres pays Membres de l’OCDE.

Selon les directives du BIT, la population active à utiliser pour calculer le taux de chômage est la population active totale qui comprend les salariés civils, les travailleurs indépendants, les travailleurs familiaux non rémunérés, les militaires de carrière et les appelés du contingent ainsi que les chômeurs. L’utilisation de données d’enquêtes auprès des ménages privés pour les estimations de la population active constitue un écart par rapport à la définition dans la mesure où les individus vivant dans des institutions sont exclus des calculs. Par exemple, les militaires vivant dans les casernes sont exclus.

Les taux de chômage standardisés sont aussi publiés mensuellement dans la publication de l’OCDE intitulée Principaux Indicateurs Économiques et sont disponibles sur Internet : <http://www.oecd.org/statistics/news-releases>.

The ILO definition of the unemployed refers to persons of working age who, in a specified period, are without work, who are available for work and who are seeking employment for pay or profit. It should be noted that the ILO Guidelines list a number of ways in which the criterion of “seeking employment” can be satisfied. These include direct applications to employers, checking on work sites and placing or answering advertisements in addition to what is in many countries the most common way of seeking work - namely, registering at an employment office.

Because registering at an employment office is only one of the ways of satisfying the seeking work criterion, it follows that registration records maintained by these offices cannot be used alone to measure unemployment according to the ILO Guidelines. This can only be measured through labour force surveys. Such surveys have been specifically developed to measure the employment status of all persons above a certain age during a specified period. They provide comprehensive statistics on unemployment, since they cover persons who may be excluded from unemployment registration systems.

Despite the preference for labour force survey data, data on registered unemployment are often used in the generation of unemployment series, especially in the generation of monthly unemployment series. For example, for countries which carry out quarterly or annual labour force surveys, monthly series may be generated by using monthly data on registered unemployment, adjusted by information from labour force surveys. These series are typically generated such that the monthly figures coincide with survey estimates, i.e. the registered unemployment data are effectively used for interpolation and extrapolation of survey data.

With regard to the calculation of unemployment, the most notable feature of Eurostat’s method is that unemployment estimates are adjusted using annual estimates based upon a common and precisely defined definition of unemployment. This is achieved by an agreement between European Union Member countries to provide unemployment figures, once a year, based upon a common set of questions which are included as part of labour force survey questionnaires. The use of this common format, in principal, generates unemployment estimates that are more internationally comparable compared to national estimates where a variety of unemployment definitions and questionnaire formats are used. Therefore, there is generally a two-stage adjustment process, the first adjustment incorporating national unemployment estimates and the second incorporating estimates derived from the common format.

Selon la définition du BIT, les chômeurs désignent les personnes en âge de travailler qui, au cours de la période de référence, sont sans travail et à la recherche d’un emploi rémunéré ou d’une activité lucrative. Il est à noter que les directives du BIT indiquent un certain nombre de dispositions à prendre pour répondre au critère de “recherche d’un emploi”. Ces dispositions incluent la candidature directe auprès des employeurs, les démarches sur les lieux de travail, l’insertion ou la réponse à des annonces dans les journaux, outre la procédure la plus couramment utilisée dans de nombreux pays à savoir, l’inscription auprès d’un service de l’emploi.

L’inscription auprès d’un service de l’emploi n’étant qu’un des moyens de rechercher un emploi, les registres tenus par ces services ne sauraient permettre à eux seuls de mesurer le chômage conformément aux directives du BIT. Le chômage ne peut être mesuré qu’au moyen d’enquêtes sur la population active. Celles-ci sont expressément conçues pour déterminer la situation au regard de l’emploi de toutes les personnes ayant dépassé un certain âge durant une période spécifiée. Elles fournissent des statistiques complètes sur le chômage car elles couvrent des personnes qui ne figurent peut-être pas dans les registres du chômage.

Bien que la préférence aille aux données d’enquêtes sur la population active, les données de chômage enregistré sont souvent utilisées pour construire des séries de chômage, en particulier des séries mensuelles. Par exemple, dans les pays qui disposent d’enquêtes trimestrielles ou annuelles, on peut construire des séries mensuelles en ajustant les données provenant d’enquêtes avec les données de chômage enregistré. Ces séries sont d’ordinaire construites de façon à faire coïncider les chiffres mensuels avec les estimations provenant de l’enquête, c’est-à-dire que les données de chômage enregistré sont utilisées pour interpoler ou extrapoler les données d’enquête.

En ce qui concerne le calcul du nombre de chômeurs, la spécificité de la méthode d’Eurostat réside dans le fait que l’estimation du nombre de chômeurs est faite à partir d’estimations annuelles basées sur une définition commune et précise du chômage. Cela est possible grâce à un accord passé avec les pays Membres pour fournir une fois par an des chiffres de chômage. Ces chiffres doivent être basés sur un jeu de questions commun qui est inclus dans les questionnaires des enquêtes sur la population active. L’utilisation d’un format identique génère en principe des estimations du chômage qui sont plus comparables que les estimations nationales basées sur des définitions et des questionnaires variés. Pour cette raison, il y a généralement un ajustement en deux étapes, dans un premier temps, on incorpore les estimations nationales du nombre de chômeurs et dans un second temps on incorpore les estimations dérivées du format communautaire.

Austria, Belgium, Czech Republic, Denmark, France, Germany, Greece, Hungary, Ireland, Italy, Luxembourg, Netherlands, Poland, Portugal, Slovak Republic, Spain and the United Kingdom, conduct either annual or quarterly labour force surveys, from which they generate both national unemployment estimates and estimates based on the common format. The monthly unemployment estimates for these countries therefore involve the two-stage adjustment of registered unemployment figures discussed above. Finland and Sweden conduct monthly labour force surveys. Therefore, the monthly unemployment estimates involve a single stage adjustment which ensures that the national monthly labour force survey results conform to the common format results.

For Australia, Canada, Japan, Korea, New Zealand, Norway and the United States monthly or quarterly labour force survey data are available which follow ILO Guidelines. For Switzerland, unemployment data are generated from an annual labour force survey, conducted every second quarter. The figures of the other quarters are interpolated using the numbers of registered unemployed. Data for the current year are provisional. Concerning employment data for Switzerland, data have now been corrected to exclude cross borders to conform to ILO recommendations.

L'Allemagne, l'Autriche, la Belgique, le Danemark, l'Espagne, la France, la Grèce, la Hongrie, l'Irlande, l'Italie, le Luxembourg, les Pays-Bas, la Pologne, le Portugal, la République slovaque, la République tchèque et le Royaume-Uni conduisent une enquête de la population active soit annuelle, soit trimestrielle à partir de laquelle sont calculées à la fois une estimation nationale du nombre de chômeurs et une estimation communautaire. Par conséquent, dans ces cas, les estimations mensuelles sont faites en deux étapes à partir des données de chômage enregistré comme on l'a précédemment indiqué. La Finlande et la Suède conduisent des enquêtes mensuelles sur la population active. Par conséquent, les estimations mensuelles du chômage impliquent un ajustement unique qui autorise la conformité des résultats nationaux de l'enquête mensuelle avec le format communautaire.

Pour l'Australie, le Canada, la Corée, les États-Unis, le Japon, la Norvège et la Nouvelle-Zélande des données mensuelles ou trimestrielles provenant d'enquêtes sur la population active satisfaisant les directives du BIT sont disponibles. Pour la Suisse, les chiffres du chômage proviennent de l'enquête annuelle qui a lieu au deuxième trimestre. Les chiffres des autres trimestres sont interpolés à l'aide des nombres de chômeurs inscrits. Les données de l'année en cours sont provisoires. En ce qui concerne la population occupée en Suisse, les données sont dorénavant corrigées pour exclure les travailleurs frontaliers, conformément aux recommandations du BIT.

Questionnaire on the quality of OECD publications

We would like to ensure that our publications meet your requirements in terms of presentation and editorial content. We would welcome your feedback and any comments you may have for improvement. Please take a few minutes to complete the following questionnaire. Answers should be given on a scale of 1 to 5 (1 = poor, 5 = excellent).

Fax or post your answer before 31 December 2004, and you will automatically be entered into the prize draw to win a year's subscription to *OECD's Observer magazine*.*

A. Presentation and layout

1. What do you think about the presentation and layout in terms of the following:

	Poor	Adequate		Excellent	
Readability (font, typeface)	1	2	3	4	5
Organisation of the book	1	2	3	4	5
Statistical tables	1	2	3	4	5
Graphs	1	2	3	4	5

B. Printing and binding

2. What do you think about the quality of the printed edition in terms of the following:

Quality of the printing	1	2	3	4	5
Quality of the paper	1	2	3	4	5
Type of binding	1	2	3	4	5
Not relevant, I am using the e-book	<input type="checkbox"/>				

3. Which delivery format do you prefer for publications in general?

Print CD E-book (PDF) via Internet Combination of formats

C. Content

4. How accurate and up to date do you consider the content of this publication to be?

1 2 3 4 5

5. Are the chapter titles, headings and subheadings...

Clear Yes No
Meaningful Yes No

6. How do you rate the written style of the publication (e.g. language, syntax, grammar)?

1 2 3 4 5

D. General

7. Do you have any additional comments you would like to add about the publication?

.....
.....
.....

Tell us who you are:

Name: E-mail:

Fax:

Which of the following describes you?

IGO NGO Self-employed Student
Academic Government official Politician Private sector

Thank you for completing the questionnaire. Please fax your answers to:

(33-1) 49 10 42 81 or mail it to the following address:
