

STATISTICAL ANNEX

This annex contains data on key economic series which provide a background to the recent economic developments in the OECD area described in the main body of this report. Data for 2014 to 2015 are OECD estimates and projections. The data in some of the tables have been adjusted to conform to internationally agreed concepts and definitions in order to make them more comparable across countries, as well as consistent with historical data shown in other OECD publications. Regional aggregates are based on weights that change each period, with the weights depending on the series considered. For details on aggregation, see *OECD Economic Outlook Sources and Methods*.

The OECD projection methods and underlying statistical concepts and sources are described in detail in *OECD Economic Outlook Sources and Methods* (www.oecd.org/eco/sources-and-methods.htm).

Corrigenda for the current and earlier issues, as applicable, can be found at www.oecd.org/about/publishing/corrigenda.htm.

The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.

NOTE ON QUARTERLY PROJECTIONS

OECD quarterly projections are on a seasonal and working-day-adjusted basis for selected key variables. This implies that differences between adjusted and unadjusted annual data may occur, though these in general are quite small. In some countries, official forecasts of annual figures do not include working-day adjustments. Even when official forecasts do adjust for working days, the size of the adjustment may in some cases differ from that used by the OECD.

Note: Weights are calculated using nominal GDP at PPP rates in 2013. Regional aggregates are calculated using moving nominal GDP weights evaluated at PPP rates. Thus, the country weights differ from year to year. Also weights may vary for different components of GDP, as the weights are based on countries' share in the total of the particular component.

1. Countries that are members of both the euro area and the OECD.

Note: The adoption of national accounts systems (SNA93, SNA08 or ESA95) has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. For further information, see table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex. These numbers are working-day adjusted and hence may differ from the basis used for official projections.

Note: The adoption of national accounts systems (SNA93, SNA08 or ESA95) has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. For further information, see table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex. Note: In so far as possible, the data have been adjusted to ensure comparability over time and to conform to the guidelines of the International Labour Office. Annual figures are calculated by averaging the monthly and/or quarterly estimates (for both unemployed and the labour force). Further information is available from OECD.stat (<http://stats.oecd.org/index.aspx>), see the metadata relating to the harmonised unemployment rate.

Note: The adoption of national accounts systems (SNA93, SNA08 or ESA95) has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. For further information, see table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex.

1. Based on data published in various issues of International Energy Agency, *Oil Market Report*.

2. Indices through 2013 are based on data compiled by the International Energy Agency for oil and by the Hamburg Institute of International Economics (HWWI) for the prices of other primary commodities; OECD estimates and assumptions for 2014 and 2015.

3. North Sea Dated, London close, midpoint.

4. OECD calculations. The total price index for non-energy primary commodities is a weighted average of the individual HWWI non-oil commodity price indices with the weights based on the commodity's share in total non-energy commodities world trade.

Note: The adoption of new national account systems (SNA93, SNA08 or ESA95) has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. See table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex. Most countries report household saving on a net basis (i.e. gross saving minus consumption of fixed capital by households and unincorporated businesses). In most countries "household" refers to the household sector plus non-profit institutions servicing households (in some cases referred to as personal saving).

Note: The underlying balances are adjusted for the cycle and for one-offs. For more details, see Sources & Methods of the *OECD Economic Outlook* (<http://www.oecd.org/eco/sources-and-methods.htm>).

1. As a percentage of mainland potential GDP. The financial balances shown are adjusted to exclude net revenues from petroleum activities.

2. Revenues due to quantitative easing that have accumulated in a special fund for several years, and that will be transferred to the UK Treasury in well-identified instalments over the projection period, are treated as fiscal one-offs and excluded from underlying fiscal measures.

Note: Gross debt data are not always comparable across countries due to different definitions or treatment of debt components. Maastricht debt for European Union countries is shown in Annex Table 61.

Financial liabilities are measured at market value. For Greece and Portugal, where the market value of outstanding debt declined substantially during the crisis, the change in government financial liabilities has been approximated by the change in government liabilities recorded for the Maastricht definition of general government debt.

For more details, see Sources & Methods of the *OECD Economic Outlook* (<http://www.oecd.org/eco/sources-and-methods.htm>).

1. Includes the debt of the Belgium National Railways Company (SNCB) from 2005 onwards.

2. Includes the debt of the Japan Railway Settlement Corporation and the National Forest Special Account from 1998 onwards.

3. Data are on a non-consolidated basis (SNA93).

Note: Net debt measures are not always comparable across countries due to different definitions or treatment of debt (and asset) components, see Sources & Methods of the OECD Economic Outlook (<http://www.oecd.org/eco/sources-and-methods.htm>).

Financial liabilities are measured at market value. For Greece and Portugal, where the market value of outstanding debt declined substantially during the crisis, the change in 2010, 2011 and 2012 in government financial liabilities has been approximated by the change in government liabilities recorded for the Maastricht definition of general government debt.

1. Includes the debt of the Belgium National Railways Company (SNCB) from 2005 onwards.

2. Includes the debt of the Japan Railway Settlement Corporation and the National Forest Special Account from 1998 onwards.

3. Data are on a non-consolidated basis (SNA93).

Note: Three-month money market rates where available, or rates on similar financial instruments. For further information, see Sources & Methods of the *OECD Economic Outlook* (<http://www.oecd.org/eco/sources-and-methods.htm>). Individual euro area countries are not shown after 1998 (1999 for Greece, 2006 for Slovenia, 2007 for the Slovak Republic and 2010 for Estonia) since their short-term interest rates are equal to the euro area rate.

Note: 10-year benchmark government bond yields where available or yield on similar financial instruments (for Korea a 5-year bond is used). The long-term interest rates refer to yields in secondary bond markets and are not representative of average government funding costs. Note . Competitiveness-weighted relative consumer prices in dollar terms. Competitiveness weights take into account the structure of competition in both export and import markets of the goods sector of 49 countries. An increase in the index indicates a real effective appreciation and a corresponding deterioration of the competitive position. For details on the method of calculation, see Sources & Methods of the OECD Economic Outlook (<http://www.oecd.org/eco/sources-and-methods.htm>).

Note: Competitiveness-weighted relative unit labour costs for the overall economy in dollar terms. Competitiveness weights take into account the structure of competition in both export and import markets of the goods sector of 49 countries. An increase in the index indicates a real effective appreciation and a corresponding deterioration of the competitive position. For details on the method of calculation, see Sources & Methods of the *OECD Economic Outlook* (<http://www.oecd.org/eco/sources-and-methods.htm>).

Note: Historical data for the OECD area are aggregates of reported balance-of-payments data of each individual country. Because of various statistical problems as well as a large number of non-reporters among non-OECD countries, trade and current account balances estimated on the basis of these countries' own balance-of-payments records may differ from corresponding estimates shown in this table.

1. National-accounts basis for OECD countries and balance-of-payments basis for the non-OECD regions.

2. Dynamic Asian Economies (Chinese Taipei; Hong Kong, China; Malaysia; Philippines; Singapore; Vietnam and Thailand), India and Indonesia.

3. Reflects statistical errors and asymmetries. Given the very large gross flows of world balance-of-payments transactions, statistical errors and asymmetries easily give rise to world totals (balances) that are significantly different from zero.

Note: The adoption of national accounts systems (SNA93, SNA08 or ESA95) has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. For further information, see table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex. Totals may not add up due to rounding and/or statistical discrepancy.

Note: For the period before 2012, gross debt figures are provided by Eurostat, the Statistical Office of the European Communities, unless more recent data are available, while GDP figures are provided by national authorities. This explains why these ratios can differ significantly from the ones published by Eurostat.

For the projection period, debt ratios are in line with the OECD projections for general government gross financial liabilities and GDP.
