GENERAL DISTRIBUTION

ECONOMICS AND STATISTICS DEPARTMENT

WORKING PAPERS

This series of Working Papers is designed to make available, to a wider readership, selected studies which the Department has prepared for use within OECD. Authorship is generally collective, but main individual authors are named. The Papers are generally available in their original language, English or French, with a summary in the other.

Comment on the Papers is invited, and may be sent to OECD, Department of Economics and Statistics, 2 rue André-Pascal, 75775 Paris Cédex 16, France. Additional copies of the Papers on a limited basis can be forwarded on request.

The Compatible Trade and Production data base (COMTAP) consists of annual statistics on production, imports and exports of manufactured goods. The key feature of this data base is that both the production and trade statistics are classified according to the same nomenclature, namely, the International Standard Industrial Classification (ISIC). The conversion of both trade and production statistics to the ISIC is approximate because there is usually no direct correspondence between the ISIC and the classification in which the trade and production data are reported to the OECD. This report describes the contents of COMTAP, some of the analytic uses to which it can be put, and the problems encountered in setting up the COMTAP data base. Finally, some examples are given of how the data base can be used to calculate "market penetration" and "export performance" ratios for 23 OECD countries over the period 1970 to 1985.

La base de données compatibles sur le commerce et la production (COMTAP) contient des statistiques annuelles relatives à la production, aux importations et aux exportations de produits manufacturés. Sa caractéristique essentielle est de classer toutes ces statistiques selon la même nomenclature : la classification internationale type par industrie (CITI). Il n'y a habituellement pas de correspondance univoque entre la nomenclature en produits CITI et les nomenclatures selon lesquelles l'OCDE reçoit les données de commerce et de production. Pour cette raison, la conversion en produits CITI des données de commerce et de production est approximative. Ce document décrit le contenu de COMTAP, certaines des exploitations analytiques auxquelles elle peut donner lieu, et certains problèmes que posait la constitution de cette base de données. Il donne enfin des exemples de l'utilisation de COMTAP pour le calcul des indicateurs de la "pénétration du marché" et "taux d'exportation" pour 23 pays Membres de l'OCDE couvrant la période 1970 à 1985.

COMPATIBLE TRADE AND PRODUCTION DATA BASE

1970-1985

Introduction

1. Two reports on the OECD Compatible Trade and Production data base (COMTAP) have been published as ESD Working Papers Nos. 18 (January 1985) and 31 (March 1986). This Working Paper follows the format of these two earlier reports but contains data for 23 OECD countries (compared with only 13 in the previous report) and covers the period 1970 to 1985. In addition, the use of micro computers has made it possible to produce annex tables covering a much longer time period.

2. The tables in this Working Paper contain only a small selection of the COMTAP data base. The complete file -- including full partner country detail for imports and exports, covering all years from 1970 to 1985 and showing industry detail at a more detailed level of the International Standard Industrial Classification (ISIC) -- can be obtained in machine-readable form from the Economics and Statistics Department. Sub-sets of the database, for specified products, countries and time-periods, can also be purchased in machine-readable form or on computer listings (1).

Contents of the data base

3. The Compatible Trade and Production Data Base (COMTAP) consists of annual statistics on production, imports and exports of manufactured goods, all valued at current prices. The key feature of COMTAP is that both the production and foreign trade data are classified according to the same nomenclature, namely the International Standard Industrial Classification of All Economic Activities (ISIC) (2).

4. The foreign trade component of COMTAP consists of the values of exports and imports reported by all OECD countries. Trade data are available with full partner country detail, and both reporting countries and partner countries can be grouped together as required. The production data in COMTAP are now available for all OECD countries except Iceland and Switzerland. Data for Yugoslavia which is an Associate Member are also included. For fourteen countries, production data are available at the most detailed (4-digit) level of the ISIC. These data have been collected by the OECD Secretariat either directly from national statistical agencies in Member countries or through consultants hired by the Secretariat. For the remaining nine countries, the production data in COMTAP are classified at the 3-digit level of ISIC. Data for these countries have been collected by the United Nations and are published in the Industrial Statistics Yearbook (3). The countries for which 4 and 3-digit detail data are available are:

4-digit (OECD source): Australia, Belgium (4), Canada, Finland, France, Germany, Italy, Japan, Netherlands, Norway, Sweden, United Kingdom and United States.

3-digit (UN source): Austria, Denmark, Greece, Ireland, New Zealand, Portugal, Spain, Turkey and Yugoslavia.

5. Both the foreign trade and production components of COMTAP are being continuously updated, although the time-lag for updating the production data is nearly 3 years. All data in COMTAP are expressed in current values converted to US dollars using current exchange rates.

Uses

6. From among the various analytic statistics that can be derived from COMTAP, four common ones are shown below (X , M , P are a given reporting country's exports, imports and production, and subscripts i , j , refer to partner countries and industries respectively):

- (a) $\frac{X_{ij} - M_{ij}}{P_j + M_j}$: Balance of trade with country i in goods produced by industry j , compared with total supply of j ;
- (b) $\frac{M_{ij}}{P_j}$: Imports of j from country i compared with production of j ;
- (c) $\frac{M_{ij}}{P_j + M_j}$: Imports of j from country i compared with total supply of j .
- (d) $\frac{M_{ij}}{P_j + M_j - X_j}$: Imports of j from country i compared with "apparent" consumption of j . This is often referred to as an "import penetration ratio".

7. Ratios of this kind can be calculated for industries defined at different levels of the ISIC, and trade partners can be defined as individual countries or territories, or as any grouping of countries, such as OPEC, Pacific Basin, Least Developed, COMECON, etc. For ratios (b) and (c), X can replace M as the numerator to provide indicators of "export performance". Two of these ratios are shown in the annexe tables, namely the "import penetration ratio" as defined in (d) and an "export performance" version of (c).

Quality of the data

8. Several problems were encountered in building up both the foreign trade and production components of COMTAP, and these affect the reliability and interpretation of the data contained therein. As regards foreign trade statistics, the basic problem is that there is no one-to-one conversion from the commodity classification (SITC) (5) in which trade statistics are reported, into the industry classification (ISIC) required for COMTAP. Even at the 4- or 5-digit level of the classification, many SITC commodities can be produced by two or more ISIC industries. There are essentially two ways of dealing with this problem -- to assign each multi-industry commodity entirely to the single ISIC code judged to be most appropriate, or to split them among all the relevant ISIC codes. The second solution has been adopted by the ESD, which is presently using a conversion table developed jointly by the United Nations Statistical Office and the World Bank. This table distributes each multi-industry commodity among the relevant ISIC codes according to the industrial composition of trade by Common Market countries in 1975 (6).

9. The conversion table can be criticised because it applies the same fixed allocation factors for all years and to trade by all countries (including non-EEC Members). While this is clearly an unsatisfactory

procedure, it nevertheless appears preferable to the alternative approach of allocating multi-industry commodities in their entirety to the single most appropriate industry. It should, in any event, be noted that only a minority of SITC codes are multi-industry, and that most commodities can be unambiguously allocated to ISIC industries.

10. It should also be noted that the conversion table currently in use links the ISIC with the first revised version of the SITC which was used by Member countries for reporting their foreign trade to the OECD up to the end of the 1970's. Member countries then adopted the second revised version of the SITC and data reported to the Secretariat in SITC Revision 2 are first converted into SITC Revision 1 before being reclassified into ISIC. The conversion from SITC Revision 1 into SITC Revision 2 is only approximate and is therefore an additional source of error. The Secretariat is currently working on a new conversion table that will link SITC Revision 2 directly with the ISIC, and when this new table is in use, there are certain to be revisions to the trade data classified in ISIC for the period since 1980.

11. The production data have been obtained by converting industrial census statistics from the national industrial classifications in which they are originally compiled into the ISIC. Often, of course, there is no one-to-one conversion from the national classifications into the ISIC, and various ad hoc solutions have had to be adopted. Other problems concern the definition of production, the treatment of secondary products, and the coverage of small establishments. For the 14 countries for which the OECD Secretariat collects the production data, these points are covered in detail in the World Bank's methodological report which is available from the Secretariat, and for the other 9 countries reference should be made to the UN publication Industrial Statistics Yearbook. However, a few comments are needed here to help in interpreting the market penetration and export performance ratios given in the next section.

12. Most countries define production as the value of sales or deliveries, but some countries -- for example, France, Italy, Sweden and Germany (the last only for certain industries) use the concept of "gross output" as defined in the national accounts. "Gross output" includes own-account construction of fixed assets and changes in stocks of finished goods in addition to the value of goods delivered to third parties. For these countries "production" will usually be higher than for the other countries.

13. The problem of secondary production arises because the statistical units defined in industrial surveys consist of "establishments" which often produce one or more secondary products in addition to their main kind of output. In some cases -- Belgium, France, Germany, Norway and Sweden for example, attempts have been made to allocate the value of these secondary products to the correct ISIC industry, but in most countries the value of secondary production is allocated to the ISIC industry appropriate for the establishment's principal output. For this latter group of countries, errors of unknown size are therefore scattered haphazardly among industries, since each ISIC code may include products that are characteristic of other ISIC codes, and may exclude products that have been erroneously allocated to some other industry.

14. In all countries, industrial surveys or censuses exclude small establishments, but among the countries included in COMTAP the definition of

"small" varies from less than 4 employees (Australia) to less than 20 (Germany and Italy). For Japan, Canada, Finland, Norway and the United Kingdom the census data have been adjusted to include estimates for small establishments. For certain the other countries, the omission of small units may lead to quite serious understatement of production, particularly in light manufacturing -- clothing, leather goods, food processing for example -- where small producers may account for a significant part of total output.

15. Production data are stored in COMTAP at the most detailed level of the ISIC i.e. at the 3 or 4-digit level, depending on the country. However, because of the problems noted above, data at the most detailed level of the classification may contain relatively large errors, and should be used with caution. Using higher-level data will sometimes eliminate errors and will almost always reduce their relative importance.

Estimated production data

16. As noted above, the production data are taken from industrial surveys or censuses. Processing the results of these inquiries is a lengthy business, and for some countries the production data for a given year do not become available until 2 or 3 years later. A related problem is that data for particular products have to be suppressed for some years because of confidentiality restrictions. In order to complete the production file, the OECD makes estimates both to fill in missing observations and to update all countries' data to the same year. These estimates are made using the following regression model:

$$\log C = \log a_0 + a_1 \log Y$$

where C is apparent consumption,

and Y is GDP at current market prices.

Apparent consumption (C) is defined as $P + M - X$ so that once C has been estimated, production (P) is obtained as $C + X - M$. The equation above is estimated by ordinary least squares. All variables are expressed at current values in national currencies. Values of Y are taken from the OECD file of standardized national accounts.

17. Tests have shown that the estimates obtained by this method are of variable quality and tend to be rather poor for production in industries that are sensitive to cyclical fluctuations, such as basic metals and investment goods industries. Estimates are, of course, replaced by firm data as soon as results become available from industrial enquiries.

Import Penetration and Export Performance Ratios

18. Two ratios are shown in the Annex Table -- an import penetration ratio ("M penetration") and an export performance ratio ("X performance"). The import penetration ratios are calculated as

$$\frac{M_j}{P_j + M_j - X_j} \cdot 100,$$

i.e. a given reporting country's imports of the output of industry j as a percentage of the reporting country's apparent consumption of j. The export performance ratios are calculated as

$$\frac{X_j}{P_j + M_j} \cdot 100,$$

i.e. a given reporting country's exports of the output of industry j as percentage of the total supply of j.

19. The import penetration ratios can generally be expected to lie between 0 and 100. A negative value can only arise if X_j exceeds $P_j + M_j$, i.e. if exports of j are greater than total supply of j. This could only happen if stocks of j accumulated in previous periods are being run down. While this may occasionally happen, it could not continue over long periods and in practice negative values are almost certainly due to data errors, such as understatement of P_j because of omission of output by small firms, or errors in M_j or X_j because of the method used to convert from SITC to ISIC. Negative import penetration ratios have been replaced by a not available sign (--) in the Annex Table.

20. Import penetration ratios in excess of 100 per cent mean that

$$\frac{M_j}{P_j + M_j - X_j} > 1 \text{ or } X_j > P_j$$

Exports of j can only exceed production if some imports of j are being exported in their untransformed state. (If they had been transformed then they would have been included in P_j). Import penetration ratios in excess of 100 per cent are not necessarily incorrect since they may be due to entrepot trade. They have therefore been retained in the Annex Table even though in reality they may arise from data errors.

21. The export performance ratios should lie between 0 per cent and 100 per cent. Negative values are impossible because all the components of the ratio carry positive signs; values in excess of 100 per cent mean that exports exceed total supply. While this is possible if exports are coming out of supplies accumulated in earlier periods, it is believed that in practice they are due to data errors of the kind discussed in paragraph 19 above. They have been replaced in the Annex Table by the "not available" sign.

Some results for 23 OECD countries

22. Tables 1a through 1d give import penetration ratios for total manufacturing for the years 1970, 1975, 1980 and 1985 respectively. Unlike the ratios in the Annex Table they show partner country detail; the numerator in the ratio is M_{ij} where i is a partner country and j refers to total manufacturing. The columns show what percentage of apparent consumption of manufactured goods in each country consist of imports from the trade partners listed in the left hand column. The columns, therefore, show the extent to which each country's domestic market in manufactured goods has been penetrated by imports, while the rows show the extent to which various trade partner's exports have succeeded in penetrating the domestic markets of the other countries.

23. The bottom row in each table (market penetration by all trade partners together) suggest that OECD countries can be divided into three groups - a low penetrated group consisting of Japan, the United States, Spain and Yugoslavia which have ratios (see Table 1d) of less than 20 per cent, a middle group of fourteen countries with ratios ranging from 25 to 50 per cent, and a high penetrated group consisting of Denmark, Belgium and Netherlands whose penetration ratios exceed 50 per cent. As expected, there is generally an inverse relationship between country size and import penetration. Large economies like the United States and Japan have low ratios while small countries like Ireland, Norway, Denmark, Netherlands and Belgium are highly penetrated. These last two countries have traditionally had very open economies, with close trading links both between themselves through the Benelux trade agreement and with their two large neighbours, Germany and France. Nevertheless, the overall penetration ratios of 70 and 90 per cent shown in Table 1d for Netherlands and Belgium respectively are almost certainly overestimated due to understatement of production because small establishments are not covered in their industrial surveys.

24. Comparison of Tables 1a and 1d shows that there have been some important changes in import penetration between 1970 and 1988. Total penetration of OECD countries as a whole (the bottom right-hand figure in the tables) rose from 12.4 to 19.5 per cent between 1970 and 1985 -- an increase of nearly 60 per cent. For the United States and the United Kingdom, the penetration ratios increased over this period by over 130 per cent and increases of 90 per cent or more were recorded for Germany, Turkey and Italy. On the other hand, penetration ratios rose by only about 10 per cent or less in Japan, Norway, Finland and Spain and actually declined in three countries -- Greece, Portugal and Yugoslavia. In interpreting these changes it must be remembered that changes in penetration ratios depend on changes in both trade and domestic production; low (high) growth in the ratio may be due either to low (high) growth of imports or to high (low) growth of domestic production.

25. Among non-OECD countries, the four Newly Industrialised Economies -- Hong Kong, Singapore, South Korea and Taiwan -- have been particularly successful in penetrating OECD markets. Between 1970 and 1985, penetration by these four countries together increased from 0.2 to 1.3 per cent; the 1985 figure is slightly higher than the levels of penetration recorded in Table 1d for France or Canada. Among the other non-OECD groups shown in Table 1, only "Developing Africa" has failed to increase its penetration of OECD markets; developing countries in Asia and, to a lesser extent, in Latin America have substantially increased their levels of penetration.

26. Tables 2a through 2d present export penetration ratios for 1970, 1975, 1980 and 1985. As in Table 1, ratios are partner country specific; the numerator is X_{ij} where i is a country of designation for exports and j refers to total manufacturing. The columns show the percentage of total supply ($P_j + M_j$) exported to the countries listed in the left hand column. The rows show partner countries' relative "openness" to the reporting country's exports; in 1985, for example, Canada was particularly open to United States exports (1.5) followed by Ireland and Sweden (0.6), New Zealand (0.5) and Japan and the United Kingdom (0.4).

27. The bottom rows in Table 2 show OECD countries' export performance vis-à-vis the rest of the world. There is much less dispersion in these overall export performance ratios than in the import penetration ratios shown

in Table 1. In 1985 (Table 2d), overall ratios for half of OECD countries were within 7 points of the "all OECD" figures of 17 percent. The outliers were the United States and Australia with low export ratios, and Denmark, Sweden, Germany, Netherlands and Belgium with export ratios in excess of 33 per cent.

28. Comparison of Tables 2a and 2d shows that between 1975 and 1980 the overall export penetration ratio for all OECD (bottom right hand figure) rose from 12.2 to 17.0, an increase of 39 per cent. Only two countries, Australia and Norway, had no increase in their export ratios; below average increases were recorded for New Zealand (12 per cent), Canada (17 per cent), Spain (19 per cent), Austria (22 per cent) and the United States (24 per cent), while above average increases were achieved by Japan (52 per cent), France (53 per cent), United Kingdom (60 per cent), Germany (63 per cent), Ireland (88 per cent) and Turkey (over 800 per cent, but from a low base in 1975).

Summary

29. The OECD's COMTAP data base contains data on trade and production in manufactured goods classified according to a common nomenclature, the International Standard Industrial Classification. A number of problems were encountered both in compiling the production component and in reclassifying imports and exports from the SITC to the ISIC, and users are required to use careful judgement in working with COMTAP data particularly at the more detailed levels of the classification. An additional drawback for some types of analysis is that data are available only at current prices. Despite this, COMTAP is a unique product which offers many possibilities for analysing relationships between foreign trade and production at a detailed commodity level. The tables above, and the simple descriptive text accompanying them, are designed to suggest to readers some of these analytic possibilities.

Notes and references

1. Enquiries should be addressed to:

Head of Economic Statistics and National Accounts Division,
OECD,
2 rue André-Pascal,
75016 Paris
2. The ISIC is described in the United Nations document, Series M, No. 4, Revision 2, United Nations, New York, 1968.
3. Industrial Statistics Yearbook (Volume I), published annually by the United Nations, New York. The production data at the 3-digit level of the ISIC are compiled by the United Nations Industrial Development Organisation (UNIDO) in Vienna.
4. Data for Belgium also include the production and foreign trade of Luxembourg. For the sake of brevity "Belgium" is used throughout this note to cover both Belgium and Luxembourg.
5. Standard International Trade Classification, Series M, No. 34, Revision 2, United Nations, New York, 1975.

6. Foreign trade statistics are published for EEC countries according to the NIMEXE classification. This is compatible with the SITC but much more detailed, so that commodities defined at the lower level of NIMEXE can almost always be assigned to a single ISIC industry.

ANNEX TABLE -- TRADE AND PRODUCTION IN MANUFACTURING: 1970 TO 1985

This Annex Table contains data on production and trade for total manufacturing (ISIC 3) and for each of the three-digit commodities defined in the ISIC. The following two pages show the full detail of the ISIC including commodities defined at the two and four-digit levels of the classification. A limited number of copies of tables for the two and four-digit commodities are available on request from the:

Economic Statistics and National Accounts Division,
OECD, 2 rue André-Pascal,
75016 Paris.

Explanatory Notes

1. Paragraphs 18 to 21 of the text explain how the import penetration (M penetration) and export performance (X performance) ratios have been calculated.
2. The last column shows average annual percentage growth rates for production, imports and exports, i.e.

$$\left[\left(\frac{1985 \text{ value}}{1970 \text{ value}} \right)^{\frac{1}{15}} - 1 \right] 100$$

For the import penetration and export performance ratios the column shows the average annual absolute changes in the ratios, i.e.

$$\frac{1985 \text{ ratio} - 1970 \text{ ratio}}{15}$$

3----	Industries manufacturières	Manufacturing
31---	Fabrication de prod. alimentaires, boissons et tabac	Manufacturing of food, beverages and tobacco
311--	Industries alimentaires	Food Manufacturing

ECONOMICS AND STATISTICS DEPARTMENT
WORKING PAPERS

**

DEPARTEMENT DES AFFAIRES ECONOMIQUES ET STATISTIQUES
DOCUMENTS DE TRAVAIL

**

In April 1983, the Economics and Statistics Department initiated a new series of economic studies entitled ESD Working Papers.

The following titles have been circulated:

1. Use of Demand Elasticities in Estimating Energy Demand (out of print)
Utilisation des Elasticités de la Demande dans l'Estimation de la Demande de l'Energie

Axel Mittelstadt

2. Capital, Energy and Labour Substitution: the supply block in OECD medium-term models
Substitution du Capital, de l'Energie et du Travail : le bloc de l'offre dans les modèles à moyen terme de l'OCDE (épuisé)

Patrick Artus

3. Wage Formation in France: sectoral aspects (out of print)
Formation des Salaires en France : aspects sectoriels

Patrick Artus

4. Service Lives of Fixed Assets (out of print)
Durée de Vie Utile des Actifs Fixes

Derek Blades

5. Resource Prices and Macroeconomic Policies: Lessons from Two Oil Price Shocks
Prix des Ressources Naturelles et Politique Macro-Economique : Les Enseignements de Deux Chocs Pétroliers (épuisé)

John Llewellyn

6. Output Responsiveness and Inflation: An Aggregate Study
Souplesse de la Production et Inflation : Etude Globale

David T. Coe and Gerald Holtham

7. The Determinants of Exchange Rate Movements (out of print)
Les Déterminants des Mouvements des Taux de Change (épuisé)

Graham Hache

8. Simulated Macroeconomic Effects of a Large Fall in Oil Prices (out of print)
Simulation des Effets Macro-économiques d'une Forte Baisse des Prix Pétroliers
Flemming Larsen and John Llewellyn
9. Medium-Term Financial Strategy: The Co-ordination of Fiscal Monetary Policy (out of print)
Stratégie Financière à Moyen Terme : la Coordination des Politiques Monétaire et Budgétaire (épuisé)
Jean-Claude Chouraqui and Robert Price
10. Price Dynamics and Industrial Structure: A Theoretical and Econometric Analysis (out of print)
Dynamique des Prix et Structure Industrielle : Une analyse théorique économétrique (épuisé)
David Encaoua (with collaboration from Paul Geroski and Riel Miller)
11. Evidence on Income Distribution by Governments (out of print)
L'Action Exercée par l'Etat sur la Redistribution du Revenu
Peter Saunders
12. Labour Force Participation: An Analysis with Projections
Taux d'Activité : Analyse et Projections
James H. Chan-Lee
13. The Demand for Money and Velocity in Major OECD Countries (out of print)
La Demande de Monnaie et la Vitesse de Circulation dans les Grands Pays de l'OCDE
A. Blundell-Wignall, M. Rondoni and H. Ziegelschmidt
14. The Conduct of Monetary Policy in the Current Recovery
La Conduite de la Politique Monétaire dans la Phase Actuelle de Reprise Economique
Paul Atkinson and Jean-Claude Chouraqui
15. Structural Budget Deficits and Fiscal Stance
Déficits Budgétaires Structurels et Orientation de la Politique Budgétaire
Patrice Muller and Robert V.R. Price
16. Monetary Policy in the OECD Interlink Model
La Politique Monétaire dans le Modèle Interlink
A. Blundell-Wignall, M. Rondoni, H. Ziegelschmidt and J. Morgan

17. Real Gross Product in OECD Countries and Associated Purchasing Power Parities (out of print)
Produit Brut Réel et Parités de Pouvoir d'Achat dans les pays de l'OCDE (épuisé)

Peter Hill
18. The OECD Compatible Trade and Production Data Base (out of print)
Base de Données Compatibles sur le Commerce et la Production de l'OCDE

Derek Blades and Wendy Simpson
19. Nominal Wage Determination in Ten OECD Economies
Détermination des Salaires Nominaux dans Dix Economies de l'OCDE

David T. Coe and Francesco Gagliardi
20. Profits and Rates of Return in OECD Countries
Profits et Taux de Rendement dans les Pays Membres de l'OCDE

James H. Chan-Lee and Helen Sutch
21. Real Interest Rates and the Prospects for Durable Growth
Taux d'Intérêt Réels et Perspectives de Croissance Durable

Paul Atkinson and Jean-Claude Chouraqui
22. Energy Prices: Trends and Prospects
Les Prix de l'Energie : Evolution et Perspectives

Axel Mittelstadt
23. Changes in the Composition of Output and Employment
Changements dans la Composition de la Production et de l'Emploi

Axel Mittelstadt and Françoise Correia
24. Labour Market Flexibility and External Price Shocks
Flexibilité du Marché du Travail et Chocs Extérieurs sur les Prix

F. Klau and A. Mittelstadt
25. Discrepancies Between Imports and Exports in OECD Foreign Trade Statistics (out of print)
Ecart entre les Importations et les Exportations dans les Statistiques du Commerce Extérieur de l'OCDE

Derek Blades and Marina Ivanov
26. Aggregate Supply in Interlink: Model Specification and Empirical Results

John Helliwell, Peter Sturm, Peter Jarrett and Gérard Salou
27. Commodity Prices in Interlink

Gerry Holtham, Tapio Saavalainen, Paul Saunders and Helen Sutch

28. Exchange Rates and Real Long-Term Interest Rate Differentials: Evidence for Eighteen OECD Countries
David T. Coe and Stephen S. Golub
29. Method of Calculating Effective Exchange Rates and Indicators of Competitiveness
Martine Durand
30. Public Debt in a Medium-Term Context and its Implications for Fiscal Policy
Jean-Claude Chouraqui, Brian Jones and Robert Bruce Montador
31. The OECD Compatible Trade and Production Data Base 1970-1983
Anders Brodin and Derek Blades
32. The Formulation of Monetary Policy: A Reassessment in the Light of Recent Experience
Paul Atkinson and Jean-Claude Chouraqui
33. Mécanismes de Transmission et Effets Macro-Economiques de la Politique Monétaire en France : les Principaux Enseignements Econométriques
Marc-Olivier Strauss-Kahn
34. Pure Profit Rates and Tobin's q in Nine OECD Countries
James H. Chan-Lee
35. Wealth and Inflation Effects in the Aggregate Consumption Function
G.H. Holtham and H. Kato
36. The Government Household Transfer Data Base
Rita Varley
37. Internationalisation of Financial Markets: Some Implications for Macroeconomic Policy and for the Allocation of Capital
Mitsuhiro Fukao and Masaharu Hanazaki
38. Tracking the US External Deficit, 1980-1985: Experience with the OECD Interlink Model
Pete Richardson
39. Monetary Policy in the Second Half of the 1980s: How Much Room For Manoeuvre?
Kevin Clinton and Jean-Claude Chouraqui

40. Tax Reform in OECD Countries: Economic Rationale and Consequences
Bob Hagemann, Brian Jones and Bruce Montador
41. A Revised Supply Block for the Major Seven Countries in Interlink
Peter Jarrett and Raymond Torres
42. OECD Economic Activity and Non-Oil Commodity Prices: Reduced-Form Equations for INTERLINK
Gerald Holtham and Martine Durand
43. Import and Export Price Equations for Manufactures
Richard Herd
44. Price Determination in the Major Seven Country Models in INTERLINK
Ulrich Stiehler
45. International Investment-Income Determination in INTERLINK: Models for 23 OECD Countries and Six Non-OECD Regions
David T. Coe, Richard Herd and Marie-Christine Bonnefous
46. Recent Developments in OECD's International Macroeconomic Model
Pete Richardson
47. A Review of the Simulation Properties of OECD's INTERLINK Model
Pete Richardson
48. The Medium-Term Macro-Economic Strategy Revisited
Jean-Claude Chouraqui, Kevin Clinton and Robert Bruce Montador
49. Are Commodity Prices Leading Indicators of OECD Prices?
Martine Durand, Sveinbjörn Blöndal
50. Private Consumption, Inflation and the "Debt Neutrality Hypothesis"
The case of Eight OECD Countries
Giuseppe Nicoletti
51. The Effects of Monetary Policy on the Real Sector: An overview of Empirical Evidence for Selected OECD Economies
Jean-Claude Chouraqui, Michael Driscoll and Marc Olivier Strauss-Kahn
52. The So-Called "Non-Economic" Objectives of Agricultural Policy
L. Alan Winters

53. Alternative Solution Methods in Applied General Equilibrium Analysis
Richard G. Harris
54. Tests of Total Factor Productivity Measurement
A. Steven Englander
55. Quantifying the Economy-Wide Effects of Agricultural Policies: A General Equilibrium Approach
Jean-Marc Burniaux, François Delorme, Ian Lienert, John P. Martin and Peter Hoeller
56. On Aggregation Methods of Purchasing Power Parities
J.R. and M. Cuthbert
57. An International Sectoral Data Base for Thirteen OECD Countries
F.J.M. Meyer-zu-Schlochtern
58. Empirical Research on Trade Liberalisation with Imperfect Competition: A Survey
J. David Richardson
59. Eliminating the US Federal Budget Deficit by 1993: the Interaction of Monetary and Fiscal Policy
R. Herd and B. Ballis
