

Chapter 11

Life as Learning – A Finnish National Research Programme

Hannele Niemi, University of Helsinki

In this chapter, we present an example of programmes inviting researchers to create new knowledge on urgent themes in society: the Finnish national research programme Life as Learning (LEARN), launched by the Academy of Finland for the years 2002-2006.

The Finnish education system has received attention from all over the world because it came out on top in the first two PISA surveys. Finnish 15-year-olds are number one in terms of skills in mathematics, scientific knowledge, the reading of literature and problem-solving (OECD, 2001, 2004), and only a very few students fall within the lowest PISA categories. Likewise, differences between schools are small. PISA shows that Finland has succeeded in its policy to enhance the equity and quality of learning. It has been a long process, and the long-term development objectives were set almost 40 years ago.

According to researchers (Väljjarvi, 2004; Simola 2005; Laukkanen 2006; Niemi and Jakku-Sihvonen 2006), the educational policy has purposefully aimed at equity in education and promoted the common comprehensive school model. In the process, many important decisions have been made, e.g. the discontinuation of streaming, the strong allocation of affordable educational resources to lower secondary education and the decentralisation of decision-making powers. Primary school teacher education was also raised to the MA level. Support for weak students was taken care of. Different stakeholders have been invited to express their opinions.

The Ministry of Education and researchers of education have been closely collaborating in promoting a common comprehensive school for all. The review group for educational sciences (Educational Research in Finland, 1990, pp. 2-3) assessed that during the last few decades, most of the researchers and professors in education have been working hard towards developing the educational system and teaching arrangements. The research that academic experts have conducted with their colleagues and students at universities has been important input. This has promoted evidence-based policy-making, which has helped to develop the education system in Finland.

Life as Learning – The Finnish case of a national research programme

Important tools for evidence-based policy-making are research programmes which invite researchers to create new knowledge on urgent themes in society. A current

example is the national research programme *Life as Learning* (LEARN) launched by the Academy of Finland for the years 2002-2006 (www.aka.fi/learn).

The initiative to establish the programme came from many public and private sector partners in 1999. In the 1990s, Finland had defined itself as a knowledge-based society, and the significance of learning became more urgent than ever. The National Board of Education, the Ministry of Education, the Future Committee of the Parliament and Nokia Corporation took the initiative to contact the Academy of Finland. They emphasised that investment in research on learning and especially in basic research is a key factor when promoting the ideal of a learning society.

In 2000 the Academy of Finland set up a preparatory group to explore the main themes of the programme. The preparatory group organised national seminars and meetings for researchers. It also arranged an international workshop to which key persons from ongoing national research programmes of learning in the United Kingdom (www.tlrp.org) and in Norway were invited. Based on what was learned from these events, the Academy of Finland set objectives and themes for the research programme and released a call for proposals in order to start the programme in 2002 (www.aka.fi/learn).

Research areas that urgently required new approaches and findings were chosen as the themes. The programme was to focus on redefining the concept of learning and examining social and cultural contexts of learning, knowledge creation, working environments, and new teachership. The preparatory group emphasised the importance of ICT in teaching and learning, but the hope was that this topic would be integrated into the development of teaching and learning environments.

The objectives of the research programme reflect the principles of multidisciplinary, cross-boundary partnerships and the anticipation of the future. The programme aimed to:

- encourage the development of a new research culture and new research partnerships and the creation of interdisciplinary and international research projects around the problems of learning;
- find a way of managing the challenges of lifelong and lifewide learning in order to avoid new forms of exclusion;
- create a solid interdisciplinary research base for developing teaching and learning in different educational and working-life contexts; and
- anticipate future learning needs from the point of view of society, culture and the individual.

The review process had a phase for outlines (116 proposals) and one for full proposals. After the international review the Academy of Finland selected 17 projects with three large consortiums. The acceptance rate of outline proposals was only 15%. An open call for programme co-ordination was also held. The Academy of Finland selected the University of Helsinki as a co-ordination unit, Professor Hannele Niemi as Scientific Director, and Researcher Raija Latva-Karjanmaa as Co-ordinator.

The Academy of Finland was the main funding agency (5.1m euros) of the programme, although Tekes, the Finnish Funding Agency for Technology and Innovation, and The Finnish Work Environment Fund also supported projects in their own focus areas. The Ministry of Education, the National Board of Education, the Centre of Expertise Programme within the Helsinki Region – Culminatum Ltd – and the

University of Helsinki provided the programme with resources for co-ordination activities, seminars and dissemination work.

The accepted projects extended to a broad scale of different disciplines: education, psychology, sociology, technology and engineering, neurology, and economics. The projects also covered a large variety of contexts of human learning in educational institutions and working life as well as non-formal learning settings and virtual learning environments. Learning was approached at individual and collaborative levels. Many projects were collaborative plans connecting researchers in several universities, and some projects also involved business partners. Some projects had an ambitious aim to create new tools for managing changing contexts or to change practices. Most projects also had strong international links.

Co-operation and dissemination throughout the programme

One aim of the programme was to create a new research culture and strengthen co-operation between different disciplines and partners. To increase cohesiveness and mutual interaction within the programme, joint meetings, conferences and social events were arranged each year. The co-ordination unit also arranged forums for researcher training, facilitated joint article and book writings in cross-over projects, and organised researcher meetings with other research programmes close to Life as Learning. Contacts with other European programmes were also offered.

A component of dissemination and partnership with practitioners and policy makers was included from the beginning of the programme. Even at the beginning of the LEARN programme, the projects already had well-grounded frameworks and foundations for their new projects and could offer important scenarios to urgent issues of learning. The national conferences “School and Teachers as Developers of Learning Environments” (2003 and 2005) were designed for teachers, headmasters, teacher educators and key persons in school policy. The conferences “Changing Working Life Contexts” (2004) and “The Social Innovations in Working Life” (2004) were organised in order to create contacts between learning researchers, enterprise and the public sector. These conferences also provided interactive sessions and discussions where practitioners could give their contributions and initiatives. The feedback from the participants was very rewarding. What teachers and practitioners were found to value was that high level researchers informed them about the projects of the Academy of Finland and that they had an opportunity to be partners in the programme.

Life as Learning has published one to three newsletters each year, LEARN periodicals (in Finnish and in English; see www.aka.fi/learn), in which the latest news from the projects and conferences have been introduced. Two special issues have been sent to all schools and working-life partners. The national TV and media have been actively involved in the programme’s work. Four TV documentaries were released in 2005 and are to be used by digital TV for later broadcasts as well.

The programme has organised two international multidisciplinary conferences, INTERLEARN 2003 and 2005. Both conferences had 200-300 participants, of whom one-fourth were researchers from other countries. Many teachers and practitioners also participated in these conferences.

The co-ordination unit together with researchers drew up a publishing plan at a very early stage of the programme. The programme had a double strategy. One aim was to

publish high quality scientific articles in international scientific refereed journals. Joint writing groups and editorial teams for a special volume of journals were set. Another aim was to produce books and articles for Finnish society. The co-ordination unit arranged negotiations with national publishing companies. As a result, an agreement was made with a company specialised in teaching and learning issues. Further, some universities offered their own publication series for the publishing of new findings. Four joint books (www.aka.fi/learn) have been already published for revising learning in schools and working places, even though the programme has not yet finished.

The dissemination and knowledge transfer has been an ongoing process. It has caused additional work for researchers, but it has also added to their motivation when they have understood the significance of their work to societal partners. This work has also been a learning experience for academic people, and sometimes finding the right way to communicate with practitioners has been difficult.

Strengths and challenges of the programme

The strengths of the project have been in promoting multidisciplinary approaches and cross-boundary co-operation and learning in different learning contexts. Even though the programme has not officially finished, we can see some promising tentative results.

Different generations of learners

Finnish society has different learning generations at the same time. Their needs and capacity to learn new skills vary a great deal. They all have different conceptions of knowledge and learning. How to help different learners to learn new ways of working is a big challenge. The younger generation also must prepare itself to learn several, perhaps three to four vocations or professions in their life course. This sets more and more emphasis on learning to learn skills in schools (Olkinuora and Rinne, 2005). In the area of vocational education new demands are to face occupational de-specialisation, multi-skills and knowledge work, simultaneous and contradictory processes of individualism and a new kind of collectivism at the same time (Heiskanen, 2005).

Learning to learn is decisive

Learning to learn has cognitive and emotional components. It is important how learners see the future and how they conceptualise themselves as learners. They must be capable of adjusting themselves to new environments. Students need a sense of hope in their learning, and motivation plays a key role in their learning paths. Learners use different strategic ways to influence their motivational orientations, and they also need strategies to cope with stress in schools and working life. Learning is more and more about sharing and being connected with networks, and people need collaborative skills when working in these environments. Multicultural groups set special demands on collaboration (Hautamäki *et al.*, 2006; Nurmi *et al.*, 2003; Pitkänen, 2003).

We can have an effect on exclusion

International comparisons (OECD, 2001, 2004) demonstrate that Finnish students have a high level of school achievements and also a high score in learning to learn skills. However, students at risk need special support in their learning. We have evidence that

we can prevent exclusion by allocating for special education and arranging flexible educational structures which give opportunities to continue learning and schooling at any phase of one's life course. We have interesting cases of how the early identification of signs of exclusion is important. An influential factor is the learners' own concept of themselves as learners. At an individual level it is also of great importance if someone (*e.g.* a tutor, friend, or teacher) gives a supportive impulse to a student who is in danger of being excluded. This support can very often happen in a very unofficial way (Martti, 2005; Suikkanen, 2005).

Learning and new technology

Web-based learning changes internal as well as external processes of organisations in knowledge creation. We need to model these processes and make them visible. Earlier roles of teachers and students have changed. In web-based learning there is a need to create richer symbol systems than only textual ones and pay more attention to emotions. Mobile technology opens new possibilities of enlarging learning spaces, and we have many new pedagogical applications available. The important message from the studies of implementations of new technologies is that unaccomplished, untested and unfinished environments estrange users. It may take a long time before they start to try again (Multisilta *et al.*, 2005; Pajanen and Multisilta, 2005). Some projects found evidence that the collaborative development and training simulations created a shared understanding of web-based teaching and studying as a collaborative process and helped to define the new roles and practices of the actors (Smeds, 2005).

New structures in working life

The change in key processes in work, from mass production to customer-intelligent services with mutual co-operation, creates totally new landscapes of learning. Team structures on working life are moving towards more flexible arrangements that can better serve the needs of customers. The nature of work is collaborative, multi-professional, and multicultural, requiring high problem-solving skills and continued learning (Engeström, 2005).

The LEARN programme covered several important areas of learning, but many urgent issues still demand more and deeper analysis of learning processes. We would need much more knowledge about the connections and relationships between processes and learning outcomes. A neuroscience perspective on processes and outcomes could open new ways to support different learners. We would need more research on methodological issues in multidisciplinary projects and how to combine individual processes and societal structures. In the economics of education, new models and more detailed analysis of effects on the investment of learning should be developed. Conceptual, philosophical and value analysis of learning is also needed when promoting learning in different environments and through different methods.

How to add additional value to the programme

Even though Life as Learning has been very successful in many respects, some issues have been threats to its effectiveness. Limited funding resources caused many restrictions on the original objectives of the projects. The Academy of Finland was forced to reduce the budgets of the proposals radically when accepting them into the programme. The

funding was available for four years, which seems to be too short a time for ambitious projects.

To add more effectiveness, the call for proposals could put more emphasis on joint activities and dissemination. This would steer researchers to include these aspects as real components of the projects. At this time it is very much the co-ordination unit's responsibility to get the researcher involved in joint activities during the programme. Joint seminars, meetings and other partnership activities also require resources, *e.g.* travel, accommodation and rent. The project funding mainly only covered the researchers' and the co-ordination unit's salaries. The co-ordination unit had to seek external funding for all dissemination seminars, workshops, and co-operation with stakeholders. Fortunately most co-funders provided some extra resources for these activities case by case, but the lack of funding created uncertainties in long-term planning.

The real gap in dissemination will be seen after the programme is over. The co-ordination ended in early 2006, and the research groups will finish their projects in 2006. Thereafter, neither forums nor resources will disseminate the primary results. The reality is that the best fruits of the programme could be gathered after the programme, but no organised way is available to create this additional value. How to bring major findings to the public awareness and how to inform stakeholders after the funding period is a challenge.

The new initiatives – next steps after the programme

The major funding agencies, the Academy of Finland and the National Technology Agency TEKES, published a document, FINNSIGHT 2015, in June 2006 (www.finnsight2015.fi/). It is a proactive national programme for innovation and competence for Finnish research policy. It is based on the work of ten expert panels, which identified the major urgent research fields in Finland: (1) learning and to renew society through learning, (2) services and innovations in services, (3) welfare and health, (4) the environment and energy, (5) infrastructures and security, (6) bio-competence and bio-society, (7) information and communication, (8) understanding and human interaction, (9) materials and (10) global business. Learning was set among the first priorities, with stress on the urgent need to discover how to facilitate the learning of various learner groups and to help organisations create fruitful environments for innovations and competence building. The main themes focus on a combination of Learning – Brain – Technology.

When drawing scenarios and future directions for research on learning, the FINNSIGHT 2015 report often refers to the network of CICERO Learning. This research network which stands for **C**ross-disciplinary **I**nitiative for **C**ollaborative **E**fforts of **R**esearch **O**n Learning, was established in 2005 by the University of Helsinki to promote multi-disciplinary research on learning. To a large degree, the Life as Learning research programme also contributed to the emergence of the CICERO Learning network. The network's new co-ordination unit is located on the premises of the University of Helsinki (for more information visit www.helsinki.fi/cicero).

The CICERO Learning network focuses on promoting nationally and internationally recognised high-level research on learning over the boundaries between different scientific fields, universities and corporate lives. The core areas of research of the

network are: (a) learning and the brain, (b) learning throughout life and in different contexts, (c) technologies of learning, and (d) learning and society.

Through conducting cutting edge research on learning, CICERO Learning aims at innovations and synergies between the research community, business and industry. An important goal of the network is to maintain Finland's position as one of the leading countries in innovations and industrial development.

As the new initiatives as well as the outcomes of the Life as Learning research programme demonstrate, promoting learning research is a long-term process, and knowledge-based societies urgently need learning research. Without systematic high-level basic research we cannot answer to those challenges.

Biography

Adrienne Alton-Lee is the Chief Education Adviser for the New Zealand Ministry of Education's Iterative Best Evidence Synthesis (BES) Programme. Her role is to strengthen the evidence-base informing policy and practice in education and to provide medium term strategic advice to government. Dr. Alton-Lee is a Fellow of the International Academy of Education. She was formerly a teacher, classroom researcher, Professor and an Associate Editor of *Teaching and Teacher Education*. She has published in leading educational journals including the *Harvard Educational Review*, the *Elementary School Journal*, the *International Journal of Inclusive Education* and the *American Educational Research Journal*.

René Bugge Bertramsen is the Deputy General Director for the Danish University and Property Agency within the Danish Ministry of Science, Technology and Innovation. Since 1999 he has been involved in reforms aiming at enhancing the quality of the Danish educational R&D system (such as the establishment of the Danish Pedagogical University – DPU – and the R&D centre Learning Lab Denmark). Mr. Bertramsen was responsible for the University Act of 2003 which gave Danish universities a new governance system, *i.e.* boards with external majority and employed rectors, deans and department heads. In 2006-2007 he was responsible for a merger process where government research institutes were integrated with the universities and a number of single-faculty universities were merged with larger multi-faculty universities, including the merger of DPU with multi-faculty University of Aarhus.

Robert Boruch, Professor, University of Pennsylvania (USA). Dr. Boruch is current co-chair of the Steering Group of the International Campbell Collaboration, and principal investigator for the Institute of Education Sciences What Works Clearinghouse, which is designed to be a central and trusted source of information on evidence about what works in education. Dr. Boruch is an elected Fellow of the American Academy of Arts and Sciences, the American Statistical Association, and the Academy for Experimental Criminology. He has received awards for his work on evaluation policy, randomised trials, and on privacy of individuals and confidentiality in social research. Dr. Boruch's academic background is in psychology, statistics, and mechanical engineering, with degrees from Iowa State University and Stevens Institute of Technology.

Satya Brink is currently Director, National Learning Policy Research, Human Resources and Social Development Canada. She and her team are responsible for developing evidence in support of policy development for lifelong learning for the Government of Canada. This work includes analysis on outcomes for each age group and type of education as well as the impacts of earlier learning on subsequent learning. In her previous post, she was responsible for research on human development based on two major Canadian longitudinal surveys. During this time she and her team produced a major body of evidence based on the National Longitudinal Survey of Children and Youth which influenced major new initiatives of the Canadian government in support of children and their families.

Tracey Burns is a research and policy analyst for the Centre for Educational Research and Innovation, OECD, Paris. Previous to this she worked on social determinants of health across the life-span with Charles Ungerleider & Associates in Vancouver, Canada. As a Post-Doctoral Fellow at the University of British Columbia, Dr. Burns led a hospital-based research team investigating newborn infants' responses to language. Tracey Burns holds a BA from McGill University, Canada and PhD from Northeastern University, USA. She is the recipient of various awards and honours, including the UBC Post-Doctoral Fellowship, a student-nominated university teaching award, and the American Psychological Association Dissertation Research Award.

Thomas D. Cook is the Joan and Serepta Harrison Chair in Ethics and Justice and Professor of Sociology, Psychology, Education and Social Policy at Northwestern University, where he is also a Faculty Fellow at the Institute for Policy Research. He has a BA from Oxford University and a Ph.D. from Stanford University. He is interested in causal methods for the social sciences and in the joint effects of neighborhoods, schools, peers and families on how young people develop socially and cognitively. He is a Fellow of the American Academy of Arts and Sciences and the Margaret Mead Fellow of the American Academy of Political and Social Science. He has been awarded the Myrdal Prize for Science by the American Evaluation Association, the Donald Campbell Prize for Innovative Methodology by the Policy Sciences Organisation, and a Distinguished Research Scholar Prize of the American Psychological Association. He is the author or editor of 10 books and over 150 chapters and articles.

Jane Davidson is the Assembly Member for Pontypridd and former Deputy Presiding Officer for the National Assembly (Wales, United Kingdom). Since October 2000 she has been the National Assembly Education and Life-Long Learning Minister responsible for all aspects of education, training and lifelong learning. Educated at Malvern Girls' College, Birmingham University and the University of Wales, Jane has taught English, Drama and Physical Education. She is also an experienced youth worker and former Cardiff City Councillor. She was a member of the Arts Council for Wales and its Lottery Board, and Head of Social Affairs at the Welsh Local Government Association before her election to the Assembly. Jane has had a keen interest in education and youth work and is enjoying the challenges of the Education and Life-Long Learning portfolio.

Stephen Gorard holds the Anniversary Chair in Educational Studies at the University of York (United Kingdom), and directs the Centre for Research into Equity and Impact in Education. He is currently leading an Economic and Social Research Council (ESRC)-funded project promoting the use and understanding of randomised controlled trials in public policy (<http://trials-pp.co.uk/>), and was the originator of the ESRC's Research Capacity-building Network. He has published widely about the research process in social science, but his substantive work focuses on issues of equity, especially in educational opportunities and outcomes, and on the effectiveness of educational systems. Recent books include "Teacher supply: the key issues", "Adult learning in the digital age", "Overcoming the barriers to higher education", and "Schools, markets and choice policies".

David Gough is Professor of Evidence Informed Policy and Practice and Director of the Social Science Research Unit (SSRU) and its Evidence for Policy and Practice Information and Coordinating (EPPI) Centre, Institute of Education, University of London, United Kingdom. Previously he worked at the University of Glasgow and Japan Women's University. He directs the Methods for Research Synthesis node of the ESRC National Centre for Research Methods Node and research projects for the Department of

Education and Skills, the Teacher Training and Development Agency, the Social Care Institute of Excellence, and the Department for Work and Pensions. Dr. Gough is editor of the journal *Child Abuse Review* and associate editor of the journal *Evidence and Policy*.

Rebecca Herman, a principal research scientist at American Institute for Research (USA), specialises in setting standards for the quality of educational research and reviewing research based on those standards. As the project director for the What Works Clearinghouse, she is responsible for the US Department of Education's flagship project to identify effective educational programmes and practices. Dr. Herman was project director of the *Educators' Guide to Schoolwide Reform*. She provided congressional testimony and many invited presentations on this and related work. Dr. Herman holds an M.A. and Ph.D. in sociology from Johns Hopkins University.

Maria J.A. van der Hoeven is the Minister of Economic Affairs (Netherlands). Maria J.A. van der Hoeven was born in 1949. She was trained as a primary teacher and taught at schools of home economics and junior secondary commercial education. Thereafter she was head of the Adult Commercial Vocational Training Centre in Maastricht and of the Limburg Technology Centre. From 1991 to 2002 Ms. Van der Hoeven was a member of the House of Representatives for the Christian Democratic Alliance (CDA). She has held a variety of social and cultural posts. Ms. van der Hoeven served as Minister of Education, Culture and Science from 2002 until February 2007. She was appointed as Minister of Economic Affairs in early 2007.

David Hogan is currently Professor and Dean of the Centre for Pedagogy and Practice at the National Institute of Education, Nanyang Technological University in Singapore. Between 2004 and 2006 he was Vice Dean for Research at CRPP. Prior to that he was Professor of Education at the University of Tasmania in Australia, and before that he held appointments as Assistant and Associate Professor at the University of Pennsylvania in Philadelphia. He completed his PhD in the history of education at the University of Illinois in 1979. His current research interests focus on the intersections between research, policy and practice, pedagogical theory, curriculum theory and design, the design of knowledge management of innovation systems in schools, multi-level and longitudinal modeling of student outcomes, citizenship and education, and education and social theory.

Bill Kilgallon, OBE, has been the Chief Executive of the UK's Social Care Institute of Excellence since 2003. Prior to that he was Chief Executive of St Anne's Community Services from 1978 to 2002, an organisation he founded in 1971, which works with single homeless people and people with learning disabilities, mental health problems and alcohol and drug problems across Yorkshire and the North East. He was Chair of the Leeds Teaching Hospitals NHS Trust, the largest NHS Trust in the country from 1998-2002 and Chair of the Leeds Community & Mental Health Services NHS Trust from 1992-1998. Bill Kilgallon served as a member of Leeds City Council from 1979-1992 where he chaired the Social Services, Housing and Environment Committees. He has led independent inquiries, including one into alleged abuse in a local authority children's service and one into the management of an NHS hospital for people with learning disabilities.

Hannele Niemi is Professor of Education (1998-) and Vice-Rector for academic affairs at the University of Helsinki, Finland (2003-). She has been Professor of Education in Oulu, Turku and Tampere Universities (1987-1998). She has been a member of the Standing Committee of Social Sciences of ESF, the Council for Society and Culture in the Academy of Finland, and the Scientific Council of the University of Helsinki. She is a Steering Committee member of the British national research programme on teaching and

learning (TLRP). She was Director of the Finnish national research programme “Life as Learning” 2002-2006. Dr. Niemi has been Chair or a researcher in many national and international evaluation projects for development of educational research and teacher education. Her main research interest areas are teachers’ professional development, moral education and technology-based learning environments.

Johnny Nilsson is the Former Secretary of State for Education in Sweden.

Andrew Pollard is Director of the Economic and Social Research Council’s Teaching and Learning Research Programme (www.tlrp.org), the UK’s largest coordinated initiative for educational research. As a teacher, his career started in Yorkshire primary schools and he has worked in teacher education or research at Oxford and Bristol Polytechnics and the Universities of the West of England, Bristol, Cambridge and London. He is presently based at the Institute of Education London. Andrew Pollard has published widely, including work on longitudinal ethnography and analysis of social factors in teaching and learning, learner perspectives, and resources for teacher education and school practitioners. He is at present working on an analysis of learning experiences through secondary education.

Rien Rouw is senior policy advisor at the Dutch Ministry of Education, Culture and Science (Department for General Strategic and Economic Advice). He is secretary of the Knowledge Chamber.

Tom Schuller is Head of the Centre for Educational Research and Innovation (CERI), OECD, Paris. Formerly Dean of the Faculty of Continuing Education and Professor of Lifelong Learning at Birkbeck, University of London, his latest books are *The Benefits of Learning: The Impact of Education on Health, Family Life and Social Capital* (RoutledgeFalmer, 2004) and *International Perspectives on Lifelong Learning* (edited with David Istance and Hans Schuetze, Open University Press, 2002).

Hans Stegeman is senior policy advisor at the Dutch Ministry of Education, Culture and Science (Department for International Policy). He is member of the OECD’s Education Policy Committee.

Charles Ungerleider is Director of Research and Knowledge Mobilisation for the Canadian Council on Learning. From 1998 until 2001, Dr. Ungerleider served as Deputy Minister of Education for the Province of British Columbia, Canada. Prior to this he was Associate Dean for teacher education (1993-1998) at the University of British Columbia. Dr. Ungerleider has studied and written about educational policy and governance, student assessment, inter-group relations, and the impact of media on Canadian society. His most recent book *Failing Our Kids: How we are ruining our public schools* provides a critical analysis of the state of public schooling in Canada, the key part schooling plays in fostering Canadian values, and how public schools are treated by parents, professionals, and politicians.

Jerzy Wiśniewski is a consultant in education, and public administration and an expert of the Center for Social and Economic Research (Poland). From 2003-2006 he served as head of Strategy and Structural Funds of the Ministry of Education. He was also Director General of the Polish Ministry of National Education at the time of launching the reform of the education system, as well as the head of the International Department of the Ministry of Education and project manager in the Foundation for Public Administration Development. He was a member of the CERI/OECD Governing Board as well as the OECD team reviewing the educational system in Lithuania, advised the Ukrainian Ministry of Education on the reform of the system, and led the team reviewing the VET system in Croatia (with the European Training Foundation).

Table of Contents

Executive Summary	9
PART ONE: SETTING THE STAGE: THE EVIDENCE AGENDA AND METHODOLOGICAL ISSUES	
Chapter 1. The Evidence Agenda	15
by Tracey Burns and Tom Schuller	
Part One: Setting the Stage: The Evidence Agenda and Methodological Issues	15
Part Two: Mediating the Research/Policy Interface: The Role of Brokerage Agencies	26
Part Three: Evidence-based Policy Research in Practice: Examples from the Field	28
Part Four: The Politicians’ Perspective	29
Concluding note	30
References	30
Chapter 2. What Counts and What Should Count as Evidence	33
by Thomas Cook and Stephen Gorard	
Introduction	33
Thomas Cook’s propositions.....	34
Stephen Gorard’s propositions	40
Agreements and disagreements	43
References	46
PART TWO: MEDIATING THE RESEARCH/POLICY INTERFACE: THE ROLE OF BROKERAGE AGENCIES	
Chapter 3. What Works Clearinghouse, United States	53
by Robert Boruch and Rebecca Herman	
The What Works Clearinghouse and embodiments of science	54
Assumptions and prospects	55
Operating principles	55
Contemporary history.....	56
The WWC’S products	56
The intended consumers and their use of WWC products	58
The WWC topics and workflow.....	58
Concluding remarks	60
References	60

Chapter 4. The Evidence for Policy and Practice Information and Co-ordinating (EPPI) Centre, United Kingdom	63
by David Gough	
Aims and function	63
Methods	64
Issues	68
References	69
Chapter 5. The Iterative Best Evidence Synthesis Programme, New Zealand	71
by Adrienne Alton-Lee	
The Iterative BES approach to knowledge brokerage	72
Fit-for-purpose synthesis methodology	72
BES development guidelines	72
Rationale for a collaborative approach across policy, research and practice	73
Iterative processes of stakeholder engagement in BES development	74
Strategy for use	74
Brokerage from a policy agency: constraints and opportunities where there is an evidence gap	75
References	78
Chapter 6. The Canadian Council on Learning, Canada	81
by Charles Ungerleider	
The establishment of the Canadian Council on Learning	81
Organisation and illustrative activities	82
Opportunities and challenges	85
Chapter 7. The Knowledge Clearinghouse, Denmark.....	87
by René Bugge Bertramsen	
Introduction	87
The institutional framework of educational R&D in Denmark.....	88
New expectations and demands	89
New solutions.....	91
Chapter 8. The Knowledge Chamber, Netherlands	93
by Hans Stegeman and Rien Rouw	
Introduction.....	93
The Ministry desires a new way to deal with knowledge	94
Mobilising top-ranking officials to minimise overkill, compartmentalisation and process-fetishism...	95
Modernising government	95
The essence: structural consultation on knowledge	96
Generating validated knowledge	97
Organising creativity	98

Chapter 9. The Social Care Institute for Excellence, United Kingdom 99
by Bill Kilgallon

Background	99
Stakeholders in social care	100
SCIE's remit.....	101
Establishing a knowledge base.....	101
Achieving change.....	102
Examples of brokerage.....	103
Conclusion.....	104
References	105

PART THREE: EVIDENCE-BASED POLICY RESEARCH IN PRACTICE: EXAMPLES FROM THE FIELD

Chapter 10. A Large-scale Policy Research Programme: A Canadian Experience 109
by Satya Brink

A major culture change	109
Policy-driven research demands a long-term view based on desirable outcomes.....	109
A better understanding of the relation between evidence and policy.....	111
Public investment in national data	111
A policy-driven consolidated policy research programme.....	112
The construction of the body of evidence	113
Policy innovations driven by evidence.....	113
Concrete results on behalf of Canadian children.....	114
Tests for quality of evidence	115
References	116

Chapter 11. Life as Learning – A Finnish National Research Programme..... 117
by Hannele Niemi

Life as Learning – The Finnish case of a national research programme.....	117
Co-operation and dissemination throughout the programme	119
Strengths and challenges of the programme.....	120
How to add additional value to the programme	121
The new initiatives – next steps after the programme.....	122
References	123

Chapter 12. The United Kingdom's Teaching and Learning Research Programme 125
by Andrew Pollard

Aims	126
User engagement for relevance and quality	127
Knowledge generation by project teams	127
Knowledge synthesis through thematic activities	127
Knowledge transformation for impact	127
Capacity-building for professional development	128
Partnerships for sustainability	129
Conclusion.....	130

Chapter 13. Policy-driven Research and Evidence-based Educational Innovation in Singapore . 131
by David Hogan

Context	131
The Singapore core research project	133
Core Research Programme.....	133
Specific Focus Projects	136
Evidence-based innovation programme	136
Reporting: towards a knowledge management and innovation system.....	138
Conclusion.....	140
References	140

PART FOUR: THE POLITICIANS' PERSPECTIVE

Chapter 14. Research-based Policy-Making: The Need for a Long-term Perspective..... 145
by Johnny Nilsson

Imbalance between the tempo of policy-making and of research	146
The long-term perspective.....	147
Interpretations of research findings are important	148
References	150

Chapter 15. Evidence-based Policy: Yes, but Evidence-based Practice as Well!..... 151
by Maria J.A. van der Hoeven

Introduction	151
Brief outline of the policy context.....	152
More solid knowledge base for national policy	152
More solid knowledge base for educational practice	154
In conclusion	155

Chapter 16. The Importance of Evidence-informed Policy Research in Education
A perspective from Wales 157
by Jane Davidson

Introduction	157
The Learning Country	158
Evidence informed policy	158
Areas for further work.....	164
Working together	166

Chapter 17. Promoting Evidence-based Policy in Education: The Case of Poland..... 167
by Jerzy Wisniewski

Background	167
Research base	168
OECD and reform	169
Effect of EU accession	171
Agenda-building.....	172
