Quarterly statistics

Oil, gas, coal
and electricity

First quarter 2018

2018

INTERNATIONAL ENERGY AGENCY

The IEA examines the full spectrum of energy issues including oil, gas and coal supply and demand, renewable energy technologies, electricity markets, energy efficiency, access to energy, demand side management and much more. Through its work, the IEA advocates policies that will enhance the reliability, affordability and sustainability of energy in its 30 member countries, 7 association countries and beyond.

The four main areas of IEA focus are:

- **Energy Security:** Promoting diversity, efficiency, flexibility and reliability for all fuels and energy sources;
- **Economic Development:** Supporting free markets to foster economic growth and eliminate energy poverty;
- **Environmental Awareness:** Analysing policy options to offset the impact of energy production and use on the environment, especially for tackling climate change and air pollution; and
 - **Engagement Worldwide:** Working closely with association and partner countries, especially major emerging economies, to find solutions to shared energy and environmental concerns.

IEA member countries:

Australia

Austria

Belgium

Canada

Czech Republic

Denmark

Estonia

Finland

France

Germany

Greece

Hungary

Ireland

Italy

Japan

Korea

Luxembourg

Mexico

Netherlands

New Zealand

I. INTRODUCTION

The aim of *Oil, Gas, Coal and Electricity Quarterly Statistics* is to provide rapid, accurate and detailed statistics on production, supply and demand as well as trade of the major energy forms mainly in, but not limited to, the OECD area. The information contained in this publication consists of:

Oil

- Production of crude oil and NGL for the major producers in the world.
- Refinery balances for crude oil, NGL, refinery feedstocks, and total (including inputs of origin other than crude oil and NGL).
- Complete product balances of production, trade, refinery intake and output, final consumption, stock levels and changes.
- Crude oil, NGL and refinery feedstocks imports from 46 origins and exports to 24 destinations.
- Trade data for main product groups, LPG and naphtha; imports from 44 origins and exports to 30 destinations.

Natural gas

- Balances of supply and consumption of OECD Member countries.
- Imports from 28 origins and exports to 20 destinations.

Coal

- World steam and coking coal and lignite production.
- World steam coal and lignite, and coking coal trade.
- Coking coal and steam coal imports and exports for OECD Member countries.

Electricity

- Breakdown of electricity supply by energy source for OECD Member countries.

The *oil and natural gas* information is derived from the Monthly Oil and Gas Statistics database. This information system has been developed by the Combined Energy Staff of the IEA in close collaboration with administrations of Member countries and international oil industry experts. It has been tailored to the needs not only of those involved in international supply and transportation, but also those concerned with oil and energy trends from the viewpoint of energy policy formulation and economic policy in general.

Coal data for OECD countries for the first three quarters of a year are submitted by Member countries, obtained from official national publications or websites or from other official publications, or are estimated using other reliable sources. For the fourth quarter of a year, all quarterly data are revised to be consistent with the annual data from the *Coal Information publication*. For EU member countries, quarterly trade data are generally obtained from Eurostat. Data for Non-OECD countries are obtained either directly from governments, official publications or estimated using other reliable sources.

A principal objective in presenting quarterly data on coal production and trade is to provide a guide to recent developments in the world market. For this reason, Total OECD and World data are estimated by the Secretariat. In order to make these aggregate estimates, data for some countries and for some recent quarters have been estimated where official statistics are not yet available. In general, such estimates are based on official statistics for previous months, as well as on industry and other Secretariat sources.

The **Electricity** information is derived from the *Monthly Electricity Statistics* database.

Inevitably, information on the recent past is frequently subject to subsequent revision. The policy of ***Oil, Gas, Coal and Electricity Quarterly Statistics*** in this respect is as follows:

- Data are published, for all countries for which they are available, approximately one quarter after that to which they refer.
- Data will be revised in subsequent issues, if necessary.
- Historical data will also be revised, where necessary, to render them consistent with current definitions.

It will be possible to publish the more detailed oil and gas trade and balance calculations only for the most recent quarters. Even those do not provide all the detailed data available in this part of the energy data bank. Should users require longer or more detailed series, these are available on the

IEA website at www.iea.org. Erica Robin and Vladimir Kubecek had overall production and editorial responsibility. The publication was produced by Amani Al-Saidi, Louis Chambeau, Stève Gervais, Sina Keivani, Ivo Letra, Dionysia Lyngopoulou, and Konstantinos Theodoropoulos.

For additional queries relating to *Oil, Gas, Coal and Electricity Quarterly Statistics*, please contact:

II. DEFINITIONS AND NOTES

1. Units and conversion factors

Oil: All figures are reported to the nearest whole number of thousand metric tons, except where otherwise specified.

Natural gas: All figures are reported to the nearest whole number of million cubic metres (at 15°C and 760 mm Hg).

Coal: All figures are reported to the nearest whole number of thousand metric tons¹.

Electricity: All figures are reported to the nearest whole number of gigawatt hours (GWh)².

2. Notes and definitions

2.1 Crude oil and petroleum products

Crude oil: Crude oil is a mineral oil of natural origin comprising a mixture of hydrocarbons and associated impurities, such as sulphur. It exists in the liquid phase under normal surface temperature and pressure and its physical characteristics (density, viscosity, etc.) are highly variable. This category includes field or lease condensate recovered from associated and non-associated gas where it is commingled with the commercial crude oil stream.

Natural gas liquids (NGL): NGL are liquid or liquefied hydrocarbons recovered from natural gas in separation facilities or gas processing plants. Natural gas liquids include ethane, propane, butane (normal and iso-), (iso) pentane and pentanes plus

(sometimes referred to as natural gasoline or plant condensate).

Refinery feedstocks: A refinery feedstock is a processed oil destined for further processing (e.g. straight run fuel oil or vacuum gas oil) excluding blending. With further processing, it will be transformed into one or more components and/or finished products. This definition also covers returns from the petrochemical industry to the refining industry (e.g. pyrolysis gasoline, C4 fractions, gasoil and fuel oil fractions).

Inputs of origin other than crude oil and NGL: This category includes synthetic crude oil from tar sands, oil shale, etc., liquids from coal liquefaction, hydrogen and emulsified oils (e.g. orimulsion). It also includes additives and oxygenates (including biofuels) destined for blending with fuels or for fuel use.

Petroleum products: Petroleum products are any oil-based products which can be obtained from primary distillation and are normally used outside the refinery industry. The exceptions to this are those unfinished products which are classified as refinery feedstocks above.

Ethane: A naturally gaseous straight-chain hydrocarbon (C₂H₆), extracted from natural gas and refinery gas streams.

Liquefied petroleum gases (LPG): LPG are light saturated paraffinic hydrocarbons derived from refinery processes, crude oil stabilisation and natural gas processing plants. They consist mainly of propane (C₃H₈) and butane (C₄H₁₀) or a combination of the two. They are normally liquefied under pressure for transportation and storage.

Commercial propanes and butanes may be of less than 99% purity. They can be liquefied at low

1. Totals may not equal the sum of components due to rounding.

2. Ibid.

pressure (5-10 atmospheres). In the liquid state and at a temperature of 38°C they have a relative vapour pressure less than or equal to 24.5 bars (ASTM D 1267 standard method). Their specific gravity varies from 0.50 to 0.58.

Naphtha: Naphtha is a feedstock destined for the petrochemical industry (e.g. ethylene manufacture or aromatics production). Naphtha comprises material in the 30°C and 210°C distillation range or part of this range.

Naphtha imported for blending is reported as an import of naphtha, then shown on the interproduct transfer row, as a negative entry for naphtha, and a positive entry for the corresponding finished product (e.g. gasoline).

Naphtha imported for blending in refineries is reported as refinery feedstocks. It is used as refinery feedstocks for reforming processes and in the chemical industry.

Total gasoline: This category groups together the products described below:

- **Aviation gasoline:** This is a motor spirit prepared especially for aviation piston engines, with an octane number suited to the engine, a freezing point of -60°C and a distillation range usually within the limits of 30°C and 180°C.
- **Gasoline type jet fuel:** This includes all light hydrocarbon oils for use in aviation turbine power units, distilling between 100°C and 250°C. They are obtained by blending kerosenes and gasolines or naphthas in such a way that the aromatic content does not exceed 25% in volume, and the vapour pressure is between 13.7kPa and 20.6kPa.
- **Motor gasoline:** Motor gasoline consists of a mixture of light hydrocarbons distilling between 35°C and 215°C. It is used as a fuel for land based spark ignition engines. Motor gasoline may include additives, oxygenates and octane enhancers, including lead compounds such as TEL (tetraethyl lead) and TML (tetramethyl lead).

Unleaded motor gasoline: Motor gasoline where lead compounds have not been added to enhance octane rating. It may contain traces of organic lead.

Leaded motor gasoline: Motor gasoline with TEL (tetraethyl lead) and/or TML (tetramethyl lead) added to enhance octane rating.

This category includes motor gasoline blending components (excluding additives/oxygenates), e.g. alkylates, isomerate, reformate, cracked gasoline destined for use as finished motor gasoline.

Total kerosene: This category groups together the products described below:

- **Kerosene type jet fuel:** This is a distillate used for aviation turbine power units. It has the same distillation characteristics between 150°C and 300°C (generally not above 250°C) and flash point as kerosene. In addition, it has particular specifications (such as freezing point) which are established by the International Air Transport Association (IATA).
- **Other kerosene:** Other kerosene comprises refined petroleum distillate and is used in sectors other than aircraft transport. It distils between 150°C and 300°C.

Gas/diesel oil (distillate fuel oil): Gas/diesel oil is primarily a medium distillate, distilling between 180°C and 380°C. Several grades are available depending on uses:

- Diesel oil for diesel compression ignition (cars, trucks, marine etc.).
- Light heating oil for industrial and commercial uses.
- Other gas oil including heavy gas oils which distil between 380°C and 540°C and which are used as petrochemical feedstocks.

Fuel oil (residual): This covers all residual (heavy) fuel oils (including those obtained by blending). Kinematic viscosity is above 10cSt at 80°C. The flash point is always above 50°C and density is always more than 0.90 kg/l.

- **Low sulphur content:** Heavy fuel oil with sulphur content lower than 1%.
- **High sulphur content:** Heavy fuel oil with sulphur content of 1% or higher.

Other products: The category “other products” groups together crude oil and NGL which do not pass through a refinery, such as refinery gas, white spirit and SBP, lubricants, bitumen, paraffin waxes, petroleum coke and others. These are described below

(NB: Please see the country notes regarding oil supply for Table B13.)

- **Refinery gas (not liquefied):** Refinery gas includes a mixture of non-condensable gases mainly consisting of hydrogen, methane, ethane and olefins obtained during distillation of crude oil or treatment of oil products (e.g. cracking) in refineries. This also includes gases which are returned from the petrochemical industry.

- **White spirit and SBP:** White spirit and SBP are defined as refined distillate intermediates with a distillation in the naphtha/kerosene range. They are sub-divided as:

Industrial spirit (SBP): Light oils distilling between 30°C and 200°C. There are 7 or 8 grades of industrial spirit, depending on the position of the cut in the distillation range. The grades are defined according to the temperature difference between the 5% volume and 90% volume distillation points (which are not more than 60°C).

White spirit: Industrial spirit with a flash point above 30°C. The distillation range of white spirit is 135° to 200°C.

- **Lubricants:** Lubricants are hydrocarbons produced from distillate or residue; they are mainly used to reduce friction between bearing surfaces. This category includes all finished grades of lubricating oil, from spindle oil to cylinder oil, and those used in greases, including motor oils and all grades of lubricating oil base stocks.

- **Bitumen:** Bitumen is a solid, semi-solid or viscous hydrocarbon with a colloidal structure, being brown to black in colour, obtained as a residue in the distillation of crude oil, by vacuum distillation of oil residues from atmospheric distillation. Bitumen is often referred to as asphalt and is primarily used for the construction of roads and as roofing material. This category includes fluidised and cut back bitumen.

- **Paraffin waxes:** These are saturated aliphatic hydrocarbons. These waxes are residues extracted when dewaxing lubricant oils. They have a crystalline structure which is more-or-less fine according to the grade. Their main characteristics

are as follows: they are colourless, odourless and translucent, with a melting point above 45°C.

- **Petroleum coke:** Petroleum coke is a black solid residue, obtained mainly by cracking and carbonising residue feedstock, tar and pitches in processes such as delayed coking or fluid coking. It consists mainly of carbon (90 to 95%) and has low ash content. It is used as a feedstock in coke ovens for the steel industry, for heating purposes, for electrode manufacture and for the production of chemicals. The two most important qualities are “green coke” and “calcinated coke”. This category also includes “catalyst coke” deposited on the catalyst during refining processes; this coke is not recoverable and is usually burned as refinery fuel.

- **Others:** All products not specifically mentioned above, for example: tar and sulphur. This category also includes aromatics (e.g. BTX or benzene, toluene and xylene) and olefins (e.g. propylene) produced within refineries.

2.2 Definitions of natural gas

Natural gas: Natural gas comprises gases, occurring naturally in underground deposits, whether liquefied or gaseous, consisting mainly of methane. It includes both “non-associated” gas originating from fields producing hydrocarbons only in gaseous form, and “associated” gas produced in association with crude oil as well as methane recovered from coal mines (colliery gas). Manufactured gas (produced from municipal or industrial waste, or sewage) and quantities vented or flared are not included.

2.3 Definitions of coal

Steam coal: calculated as the sum of anthracite, other bituminous and sub-bituminous coals.

- **Anthracite:** This is a high-rank coal used mainly for industrial and residential heat raising and defined as a non-agglomerating coal with a gross calorific value greater than 5 732 kcal/kg (24 GJ/t) on an ash-free but moist basis.

- **Other bituminous coal:** This is a coal with a gross calorific value greater than 5 732 kcal/kg (24 GJ/t) on an ash-free but moist basis and with a mean random reflectance of vitrinite of at least

0.6 and is commonly known as thermal coal. It includes recovered slurries, middlings and other low-grade coal products not further classified by type. Coking coals are not included.

- **Sub-bituminous coal:** This is a non-agglomerating coal with a gross calorific value between 4 777 kcal/kg (20 GJ/t) and 5 732 kcal/kg (24 GJ/t) on an ash-free but moist basis.

Coking coal: This is a coal with a gross calorific value greater than 5 732 kcal/kg (24 GJ/t) on an ash-free but moist basis and with a mean random reflectance of vitrinite of at least 0.6 with a quality that allows the production of coke suitable to support a blast furnace charge.

Lignite: This is defined as non-agglomerating coal with a gross calorific value less than 4 777 kcal/kg (20 GJ/t) and greater than 31% volatile matter on an ash-free but moist basis.

2.4 Definitions of electricity

Net electricity production: This is equal to the gross electricity production less the electrical energy absorbed by the generating auxiliaries and the losses in the main generator transformers. All the published data are based on this definition.

3. Abbreviations and signs used in this Volume

NGL:	Natural gas liquids
LPG:	Liquefied petroleum gas
Refinery intake (obs.):	Refinery intake (observed)
Intl. marine bunkers:	International marine bunkers
Gross consumption (obs.):	Gross consumption (observed)
Consumption (obs.):	Consumption (observed)
Consumption (cal.):	Consumption (calculated)
t:	Metric ton
Mt:	Million metric tons
GWh:	Gigawatt hours

4. Geographical notes

This document and any map included herein are without prejudice to the status of or sovereignty over any territory, to the delimitation of international frontiers and boundaries and to the name of any territory, city or area.

IEA countries:

Australia excludes the overseas territories.

Denmark excludes the Faroe Islands and Greenland for Gas, Coal and Electricity.

France includes Monaco. Since 2017 for oil and gas it includes the overseas territories Guadeloupe, Martinique, French Guiana, Reunion, Saint Pierre and Miquelon, New Caledonia, French Polynesia, Wallis and Futuna and Mayotte. Since 2018 it includes these territories also for electricity.

Italy includes the Holy See and San Marino.

Japan includes Okinawa.

The Netherlands excludes Suriname, Aruba and the other former Netherland Antilles (Bonaire, Curaçao, Saba, Saint Eustatius and Sint Maarten).

Portugal includes the Azores and Madeira.

Spain includes the Canary Islands.

Switzerland does not include Liechtenstein for Coal and Electricity.

United States includes 50 States and the District of Columbia. Oil also includes Puerto Rico, the U.S. Virgin Islands, and Guam. Foreign trade to and from all U.S. territories is included in U.S. trade. Trade between all U.S. territories and the U.S. is considered to be internal trade and not included in imports or exports. Coal trade incorporates Puerto Rico within the national boundary definition, but excludes all other territories and the Minor Outlying Islands. Therefore, exports from the United States to Puerto Rico are not shown, while imports from other countries to Puerto Rico may be shown as United States imports from those countries.

United Kingdom includes Jersey, Guernsey and the Isle of Man for oil and gas. Shipments of coal to the Channel Islands and the Isle of Man from the United Kingdom are not classed as exports. Supplies of coal and oil to these islands are, therefore, included as part of UK supply.

Other countries and economies:**Cyprus:**

Note by Turkey:

The information in this document with reference to “Cyprus” relates to the southern part of the Island. There is no single authority representing both Turkish and Greek Cypriot people on the Island. Turkey recognises the Turkish Republic of Northern Cyprus (TRNC). Until a lasting and equitable solution is found within the context of United Nations, Turkey shall preserve its position concerning the “Cyprus issue”.

Note by all the European Union Member States of the OECD and the European Union:

The Republic of Cyprus is recognised by all members of the United Nations with the exception of Turkey. The information in this report relates to the area under the effective control of the Government of the Republic of Cyprus.

Israel: The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.

Former Netherlands Antilles: The Netherlands Antilles was dissolved on 10 October 2010, resulting in two new “constituent countries” of the Netherlands (Curaçao and Sint Maarten), with the other islands joining the Netherlands as “special municipalities”. However, due to a lack of detailed data, the Secretariat’s data and estimates under the “Former Netherlands Antilles” still refer to the whole territory of the Former Netherlands Antilles as it was known prior to 10 October 2010.

Country groupings

The following country groupings are used for all of the totals throughout the book, unless specified otherwise in the table descriptions:

Total OECD: Australia; Austria; Belgium; Canada; Chile; Czech Republic; Denmark; Estonia; Finland; France; Germany; Greece; Hungary; Iceland; Ireland; Israel; Italy; Japan; Korea; Latvia; Luxembourg; Mexico; Netherlands; New Zealand; Norway; Poland; Portugal; Slovak Republic; Slovenia; Spain; Sweden; Switzerland; Turkey; United Kingdom; United States.

OECD Americas: Canada; Chile; Mexico; United States.

OECD Asia Pacific: Australia; Israel; Japan; Korea; New Zealand.

OECD Europe: Total OECD except Australia; Canada; Chile; Israel; Japan; Korea; Mexico; New Zealand; United States.

IEA: Total OECD excluding Chile; Iceland; Israel; Latvia; Slovenia.

5. Description of individual tables**5.1 Description of oil tables****Tables A1-A3: world production and supply**

These tables show world crude oil, NGL and non-conventional production and supply.

Non conventional production: This category includes the production of synthetic crude oil from tar sands, oil shale, etc., liquids from coal liquefaction, hydrogen and emulsified oils (e.g. orimulsion).

Country groupings for world production and supply tables

Former Soviet Union: Azerbaijan; Belarus; Georgia; Kazakhstan; Kyrgyzstan; Russian Federation; Tajikistan; Turkmenistan; Ukraine; Uzbekistan.

Other Non-OECD Europe: Albania; Bulgaria; Croatia; Former Yugoslavia (excluding Slovenia); Romania.

Non-OECD Non-OPEC America: Argentina; Barbados; Bolivia; Brazil; Colombia; Cuba; Guatemala; Peru; Suriname; Trinidad and Tobago.

Non-OPEC Africa: Benin; Cameroon; Chad; Congo; Côte d’Ivoire; Democratic Republic of Congo; Egypt; Ghana; Mauritania; Morocco; Mozambique; Namibia; Niger; South Africa; South Sudan; Sudan; Tunisia.

Non-OECD Non-OPEC Middle East: Bahrain; Jordan; Oman; Syrian Arab Republic; Yemen.

Non-OPEC East Asia: Bangladesh; Brunei Darussalam; China (People's Republic of); India; Mongolia; Nepal; Pakistan.

Non-OPEC South Asia: Indonesia; Malaysia; Myanmar; Papua New Guinea; Philippines; Chinese Taipei; Thailand; Timor-Leste; Viet Nam.

OPEC: Algeria; Angola; Ecuador; Equatorial Guinea; Gabon; Iran; Iraq; Kuwait; Libya; Neutral Zone; Nigeria; Qatar; Saudi Arabia; United Arab Emirates; Venezuela.

Global biofuels: Comprises all world biofuel production including Brazil and United States.

Tables B1 to B4: Supply of crude oil, natural gas liquids (NGL), refinery feedstocks and inputs of origin other than crude oil and NGL

Cover all flows of crude oil, NGL, refinery feedstocks and inputs with origin other than crude oil and NGL. For definitions, see Section 2.1.

Indigenous production: All production within national boundaries including offshore production. Production only includes marketable production, excluding volumes returned to formation. Such production includes all crude oil, NGL, condensates and inputs with origin other than crude oil and NGL. The latter may include synthetic crude oil, oil from shale and tar sands etc. It may also include additives/oxygenates (including biofuels) destined for blending with fuels or for fuel use.

Backflows to refineries (returns from industry): These are finished or semi-finished products which are returned from final consumers to refineries for processing, blending or sale. They are usually by-products of petrochemical manufacturing. For integrated petro-chemical industries this flow could be estimated. Transfers from one refinery to another within the country are excluded.

Transfers: These are imported petroleum products which are reclassified as feedstocks for further processing in the refinery, without delivery to final consumers.

Imports and exports: Reflect amounts having crossed the national territorial boundaries of the country whether customs clearance has taken place or not. Quantities of crude oil imported or exported under processing agreements (*i.e.* refining on account) is included. Crude oil and NGL are reported as coming

from the country of origin; refinery feedstocks and products are reported as coming from the last country of consignment.

Re-exports of oil imported for processing within bonded areas are included as an export of product from the processing country to the final destination.

Direct use: Crude oil, NGL and other hydrocarbons which are used directly without being processed in oil refineries are reported as direct use. This includes, for example, crude oil burned for electricity generation. Such quantities will appear in the supply of products under "primary product receipts" in Tables B5-B13 (See notes for Tables B5-B13).

Stock changes: This is closing stock level minus opening stock level. A stock build is shown as a positive number, a stock draw as a negative number.

Statistical difference: These are the differences between refinery intake as defined by the elements above and the observed figure as reported.

Refinery intake (observed): Where data from special refinery surveys were available, they have been entered as observed refinery intake. This figure is defined as:

	Indigenous production
+	Backflows to refineries
+	Transfers
+	Imports
-	Exports
-	Direct use
-	Stock changes
-	Statistical difference

However, where this is not the case, the difference between what is observed and what is actually reported is presented in the statistical difference (see above).

Definition of stocks: All non-military stocks held by importers (including all final consumers directly), refiners, Governments, major non-importing final consumers eligible under IEA/OECD commitments and by foreign entities in the following facilities: bulk terminals, refinery tanks, pipeline tankage, barges, intercoastal tankers (when port of departure and destination are in the reporting country), tankers in port (to the extent that their cargo is to be unloaded in the reporting country), and inland ship bunkers. Oil is reported regardless of the ownership of such storage facilities.

The definition above excludes oil held in pipelines, in rail tank cars, in truck tank cars, in sea going ships' bunkers, in service stations, retail stores and in tankers at sea.

Tables B5 to B13: Supply of finished products together with crude oil and NGL which do not pass through a refinery.

For definitions of individual products see Section 2.1.

Primary product receipts: These concern indigenous or imported crude oil (including condensate) and indigenous NGL which are used directly without being processed in an oil refinery.

Gross refinery output: This category excludes refinery losses, but includes refinery fuel. It must be equal to refinery intake (observed) minus refinery losses.

Recycled products: These are finished products which pass a second time through the marketing network, *after* having been once delivered to final consumers (*e.g.* used lubricants which are reprocessed). These quantities should be distinguished from petrochemical backflows (see definition).

Refinery fuel: Does not include products used by oil companies outside the refining process, *e.g.* bunkers or oil tankers.

Imports and exports: Definition as for Tables B1 to B4.

International marine bunkers: Cover the quantities of fuels delivered to sea-going ships of all flags, including warships and fishing vessels. Consumption by ships engaged in transport in inland and coastal waters is not included.

Interproduct transfers: These are transfers which take place *between* products. These products have been re-classified for example after a blending process. A negative entry for one product is compensated for by a positive entry (or several entries) of one or several products and vice versa. The total net effect should be zero.

Products transferred: These are finished products which have been re-classified and returned for use in a refinery. (They are not to be confused with back-

flows to refineries which are quantities returned from the chemical or petro-chemical industries). Such products can be indigenous or imported. Quantities entered will always be *positive* but will be *subtracted* when calculating gross deliveries to inland consumption (see below).

Stock changes: Definition as for Tables B1 to B4.

Statistical difference: This is the difference between calculated and observed gross deliveries to inland consumption.

Gross deliveries to inland consumption (observed): This figure should be defined as:

	Primary product receipts
+	Refinery gross output
+	Recycled product
-	Refinery fuel
+	Imports
-	Exports
-	International marine bunkers
+	Interproduct transfers
-	Products transferred
-	Stock changes
-	Statistical difference

The observed figure may differ from the calculated figure due, for example, to differences in coverage and/or differences of definition in different reporting systems.

Backflows to refineries: See definition of backflows to refineries for Tables B1 to B4. The quantity reported in Table B1 should be equal to the quantity as reported in Table B5. Those quantities of backflows used directly as finished products are included in the data reported under "backflows to refineries" of that product category from which the original input to the chemical industry came.

Net deliveries to inland consumption: Defined as gross deliveries to inland consumption (observed) minus backflows to refineries.

Stocks: Definition as for Tables B1 to B4.

Tables C1-C6: Oil trade

Imports and exports: Definition as for Tables B1 and B4. Except for Section C1: 'Crude oil + NGL + refinery feedstocks' includes additives/oxygenates and hydrocarbons.

Country groupings for trade tables

Imports – Crude oil, NGL, refinery feedstocks

Other Africa: Cameroon; Egypt; Democratic Republic of Congo; Tunisia; Other Africa.

Other Far East: Brunei Darussalam; Hong Kong, China; India; Papua New Guinea; Singapore; Thailand; Other Asia.

Other Near and Middle East: Bahrain; Oman; Yemen; Other Near and Middle East.

Other non-OECD Europe: Bulgaria; Cyprus³; Lithuania; Former Soviet Union (excluding Estonia and Russian Federation); Former Yugoslavia (excluding Slovenia); Malta; Romania; other non-listed European countries.

Other Western Hemisphere: Argentina; Bahamas; Brazil; Former Netherlands Antilles; Peru; Trinidad and Tobago.

Other import areas: Non-Specified.

Exports – Crude oil, NGL, refinery feedstocks

Other non-OECD Europe: Bulgaria; Cyprus⁴; Former Yugoslavia (excluding Slovenia); Former Soviet Union (excluding Estonia and Latvia); Malta; Romania; Other Europe.

Other Africa: Algeria; Egypt; Libya; Morocco; Nigeria; South Africa; Tunisia; Other Africa.

Other Western Hemisphere: Argentina; Brazil; Colombia; Trinidad and Tobago; Venezuela; Other non-OECD Americas.

Other Export Areas: Hong Kong, China; India; Indonesia; Iran; Iraq; Kuwait Lebanon; Malaysia; Pakistan; Philippines; Qatar; Saudi Arabia; Syrian Arab Republic; Chinese Taipei; Thailand; Viet Nam; Other Asia and Pacific; Other Near Middle East; Non-Specified.

Imports – products

Other OPEC: Angola, Ecuador, Equatorial Guinea, Gabon, Iraq.

Other Africa: Cameroon; Congo; Democratic Republic of Congo; Tunisia; Other Africa.

Other non-OECD Europe: Bulgaria; Cyprus⁵; Former Soviet Union (excluding Estonia and Latvia); Former Yugoslavia (excluding Slovenia); Malta; Other Europe.

Other Near and Middle East: Bahrain; Yemen; Oman; Syrian Arab Republic; Other Near and Middle East.

Other Far East: Brunei Darussalam; Hong Kong, China; Papua New Guinea; Thailand; Viet Nam; Other Asia and Pacific.

Other Import Areas: Bahamas; Colombia; Peru; Other non-OECD Americas; Non-Specified.

Exports – products

Other Africa: Algeria; Egypt; Morocco; South Africa; Other Africa.

Other Far East: Hong Kong, China; India; Malaysia; Pakistan; Philippines; Chinese Taipei; Thailand; Viet Nam; Other Asia and Pacific.

Other non-OECD Europe: Bulgaria; Cyprus⁶; Former Soviet Union (excluding Estonia and Latvia); Former Yugoslavia (excluding Slovenia); Malta; Romania; Other Europe.

Other Western Hemisphere: Argentina; Colombia; Trinidad and Tobago; Venezuela; Other Latin America.

Other Export Areas: Iran; Iraq; Kuwait; Qatar; Saudi Arabia; Syrian Arab Republic; Other Near and Middle East; Non-Specified.

5.2 Description of natural gas tables

Supply tables D

Indigenous production: Dry marketable production, measured after purification and extraction of NGL and sulphur. It does not include quantities re-injected, extraction losses, or quantities vented and flared. It includes quantities used within the natural gas industry, in gas extraction, pipeline systems and processing plants.

Imports and exports: Amounts are considered as imported or exported when they have crossed the political boundaries of the country, whether customs

3. Please refer to II.4, Geographical notes.

4. Ibid.

5. Ibid.

6. Ibid.

clearance has taken place or not. Imports of liquefied natural gas cover only the dry marketable equivalent after regasification.

The gas trade data from 1Q2011 onwards corresponds to physical flows (entries/exits).

Stock change: This is closing stock level minus opening stock level (stocks on national territory). A stock build is shown as a positive number, a stock draw as a negative number.

Inland consumption (observed): This category represents deliveries of marketable gas to the inland market, including gas used by the gas industry for heating and operation of their equipment (*i.e.* consumption in gas extraction, in the pipeline system and in processing plants); losses in distribution should also be included.

Statistical difference: This is the difference between calculated and observed Inland Consumption.

Stock levels: This refers to natural gas stored in special storage facilities (depleted gas and/or oil field, aquifer, salt cavity, mixed caverns, or other) as well as liquefied natural gas storage.

Trade tables E

Imports and exports: Definition as for Tables D.

Country groupings:

Imports

Other Import (Entry) Areas: Albania; Angola; Argentina; Armenia; Azerbaijan; Bosnia and Herzegovina; Brunei Darussalam; Bulgaria; Croatia; Cyprus⁷; Democratic People's Republic of Korea; Egypt; Equatorial Guinea; Former Yugoslav Republic of Macedonia; Georgia; Gibraltar; Jordan; Latvia; Lebanon; Lithuania; Malta; Republic of Moldova; Montenegro; Morocco; Nigeria; Oman; Other Former Soviet Union; Papua New Guinea; Peru; Romania; Serbia; Syrian Arab Republic; Trinidad and Tobago; Yemen; Other Asia and Pacific; Non-Specified.

5.3 Description of coal tables

For definitions of individual products, see Section 2.3.

For geographical definitions, see Section 4.

Tables F1 and F2: World coal production **Steam and coking coal production and lignite production:** These data include both *indigenous production* and *production from other sources*.

Indigenous production: The quantity of fuels extracted or produced, calculated after any operation for removal of inert matter. In general, production includes the quantities consumed by the producer in the production process (*e.g.* for heating or operation of equipment and auxiliaries) as well as supplies to other producers of energy for transformation or other uses.

Production from other sources: This covers coal from recovered slurries, middlings and other low grade coal products which cannot be classified according to type of coal from which they are obtained.

Tables G1 to G6: World steam coal and lignite and coking coal trade

Data refer to total imports and exports for the period indicated. Amounts are considered as imported or exported when they have crossed the political boundaries of the country, whether customs clearance has taken place or not. Tables H1 and H2: Steam coal and coking coal trade, by origin and destination.

Data refer to imports and exports by origin and destination for the period indicated.

5.4 Description of electricity tables

Tables I

Combustible fuels: The net electricity produced from combustible fuels. Combustible fuels are sources of heat derived from the oxidation of hydrocarbons, for direct use or for electricity generation. The term covers fossil fuels (primary coal, coal products, peat and peat products, oil shale and oil sands, crude oil, NGL, petroleum products, natural gas), combustible renewables and wastes (solid bio-fuels, biogases, liquid biofuels, industrial and municipal waste) and other combustible fuels.

Hydro: The net electricity produced in hydro power plants. Hydro output includes output from pumped storage plants.

Nuclear: The net electricity produced by nuclear power plants.

7. Please refer to II.4, Geographical notes.

Geothermal/other: Generation from geothermal, solar photovoltaic, solar thermal, wind, tide, wave, ocean and other non-combustible sources.

Indigenous production: This is the total net electricity production in the country/region, calculated as the sum of net production from combustible fuels, hydro, nuclear, geothermal and other sources. It includes both main activity producers (formerly known as public) and autoproducers. The net production excludes power station own use.

The quarterly figure may differ from the annual figure due, for example, to differences in coverage of countries reporting systems. For the publication of

the first quarter of each year, quarterly data are calculated to be aligned on the annual ones.

Imports: Comprise amounts having crossed the national territorial boundaries of the country whether or not customs clearance has taken place.

Exports: Comprise amounts having crossed the national territorial boundaries of the country whether or not customs clearance has taken place.

Consumption: Calculated as the arithmetic sum of the elements shown in the rows above. This figure is often referred to as “apparent consumption”.

Percentage change: Change in the value for the period indicated over the previous period.

III. COUNTRY NOTES

The following notes concern data for specific countries; group totals which include these countries will be correspondingly affected.

Please note that certain countries do not send a detailed breakdown of their oil/gas trade. The aggregate data therefore may include large quantities in the “Other import/export areas”.

Estimated data

Oil

Israel – January 2010 to March 2018.

Gas

Israel – January 2010 to March 2018.

Coal

Steam and coking coal production: Please refer to sources in Table F1.

Lignite production: Please refer to sources in Table F2.

Trade: Please refer to sources in Tables G1 to G4.

Annual 2017p trade data by country were estimated for the following OECD countries: Iceland, Israel, Japan, Korea, Mexico and New Zealand.

Electricity

Japan – March 2018 electricity production.

Luxembourg – March 2018 electricity production.

Annual 2017p data for the following countries were partially estimated: Canada, Greece, Japan, Mexico and the United States.

Annual 2017p data for Iceland were estimated.

A general note

Some countries do not report gas stock levels. As a consequence stock changes may not be equal to closing minus opening stocks.

Specific country notes

Oil

Data for Australia

There is a break in stocks between December 2016 and January 2017 for motor gasoline and gas/diesel oil as the Australian administration added new companies to their collection system.

There is a break in series between December 2017 and January 2018 due to a change in reporting methods, which involves new mandatory reporting for refineries and companies in the oil sector.

Data for Austria

Most recent data are the best estimates from the Austrian national administration, based on available preliminary data. Data is usually finalised within three months of the first publication.

Starting from January 2016, NGL data are included in crude oil figures due to a change in the data reporting methodology.

Data for Canada

Data for Canada are submitted by the Department of Natural Resources (Natural Resources Canada, or NRCan), based on actual and preliminary data from Canada’s national statistical agency (Statistics Canada) and various other sources. In cases where data from these sources are unavailable, estimates are conducted by NRCan, based on information available at the time, including alternative sources.

Data are usually finalised within three months of the first publication. An important source for any differences between data published by Statistics Canada and data published by the IEA is data estimated by NRCan or the IEA Secretariat.

There is a break in series between December 2015 and January 2016 data as the Canadian Administration is using a new methodology from January 2016 data onwards. Under the new methodology crude oil includes condensates and pentanes plus for all flows and motor gasoline imports are better accounted for. Furthermore reporting has been improved with an appropriate use of the flow “recycled products”.

Data for France

Following a methodological change in the French statistics coverage, data from January 2017 onwards includes the overseas departments (French Guiana, Guadeloupe, Martinique, Mayotte and Reunion).

Data for Germany

There is a break in time series between December 2016 and January 2017 due to a change in the data reporting methodology for biofuels.

Data for Ireland

There is a break in stocks for fuel oil, diesel and heating oil stocks between December 2016 and January 2017 due to a change in the data reporting methodology used by the Irish administration.

Data for Israel

The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.

Information is based on data published by the Ministry of Energy and Water Resources as well as the Central Bureau of Statistics.

The trade breakdown and information on stock levels are not available at this time.

Petroleum coke is included by the Israeli Administration in the amounts of other petroleum products.

Data for the Mexico

Starting from January 2018, reporting of LPG imports and deliveries is based on a more comprehensive coverage of the market.

Data for the Netherlands

As of December 2016, large amounts of fuel oil are reported under other products due to their chemical properties.

Trade breakdown data for most recent quarters are the best estimates from the Dutch Administration.

Data for Portugal

As of January 2016, Portugal reports refinery gross output and refinery fuel of refinery gas, these values were reported under other products before.

Data for Sweden

In January 2017, Statistics Sweden added more companies to their new data collection system, causing a stock break between December 2015 and January 2016.

Data for the United States

LPG includes ethane and pentane (Table B7).

The US Energy Information Administration (EIA) excludes crude oil lease stocks (crude oil stocks held at producing sites) from industry stocks of crude oil.

Natural Gas

Data for Australia

Prior to July 2015, total exports of natural gas are estimated by the administration, based on annual and quarterly data.

The breakdown of export destinations is estimated by the IEA on the basis of OECD imports of natural gas from Australia.

Indigenous production of natural gas includes colliery gas.

Data for Belgium

Most recent data on origins of imports and final destinations of exports of LNG are the best estimates from the Belgian Administration based on available preliminary data.

Data for Canada

Data for Canada are submitted by the Department of Natural Resources (Natural Resources Canada, or NRCan), based on actual and preliminary data from Canada’s national statistical agency (Statistics Canada) and various other sources. In cases where

data from these sources are unavailable, estimates are conducted by NRCan, based on information available at the time, including alternative sources. Data are usually finalised within three months of the first publication. An important source for any differences between data published by Statistics Canada and data published by the IEA is data estimated by NRCan or the IEA Secretariat.

There is a break in stocks for natural gas between December 2015 and January 2016. From January 2016 data onwards Statistics Canada is officially publishing data on stock levels.

There is a break in stocks between December 2016 and January 2017 due to the inclusion of a storage unit beginning in 2017.

Data for Iceland

There are no natural gas data for Iceland, as there is no production or consumption of natural gas.

Data for Ireland

There is a break in stocks between December 2016 and January 2017, caused by withdrawal of cushion gas from storage facilities due to the decommissioning of operations. As of May 2017, there is no gas stored in Ireland.

Data for Israel

The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.

Information based on data published by the Ministry of Energy and Water Resources as well as the Central Bureau of Statistics.

The stocks level information is not available at this time.

Data for Korea

Gross inland deliveries (observed) of natural gas include own use.

Data for Mexico

Observed gross inland deliveries of natural gas are estimated based on supply information.

Data for the United Kingdom

Beginning with January 2016, exits to the Isle of Man are reported under Non-Specified/Other. Prior to this date, exits to the Isle of Man were included in exits to Ireland.

Coal

Data for Belgium

Coal exports consist of re-exported volumes. Re-exporting increases reported imports and exports. This is corrected on an annual basis.

Data for Canada

Due to confidentiality constraints, the annual breakdown of production by type of coal since 2014 is estimated by the Canadian Administration.

Data for Germany

Quarterly data may state imports from the Netherlands, however, the annual data are corrected with country of origin.

Data for Israel

Imports of other bituminous coal for annual 2017p data were estimated by the IEA Secretariat.

Data for Japan

Annual trade data were estimated by the IEA Secretariat.

Data for Korea

Imports of anthracite, other bituminous coal and coking coal have been estimated by the IEA Secretariat for annual 2017p data.

Data for Mexico

Annual trade data for 2017p were estimated by the IEA Secretariat.

Data for the Netherlands

International coal trade into and through the hub ports of Amsterdam and Rotterdam is complicated by the capacity to purchase coal directly at these points. The majority of coal passing through these ports is intended for consumption in European countries other than the Netherlands, so constitutes neither the country of origin or destination.

Data for New Zealand

Total exports of coking coal are provided by the New Zealand administration for annual 2017p data, while partner countries for this year were estimated by the IEA Secretariat based on partner data

Electricity***Data for Canada***

Electricity production from Solar PV for annual 2017p data has been estimated by the IEA Secretariat.

Data for Greece

Electricity production from Lignite and Natural Gas for annual 2017p data were estimated by the IEA Secretariat.

Data for Iceland

Annual 2017p data were estimated by the IEA Secretariat.

Data for Israel

Israel is not included in this publication.

For more detailed country notes concerning the quarterly data, please refer to the Monthly Electricity Statistics (<http://www.iea.org/statistics/relatedsurveys/monthlyelectricitysurvey/>).

Data for Japan

Electricity production from wind for annual 2017p data has been estimated by the IEA Secretariat.

Data for Mexico

The breakdown of electricity generation by coal products for annual 2017p data has been estimated by the IEA Secretariat.

Data for United States

For annual 2017p data, the breakdown of electricity generation by coal products, and electricity generation from solar PV have been estimated by the IEA Secretariat.

Energy Data Officer/Statistician

Possible staff vacancies

International Energy Agency, Paris, France

The IEA

The International Energy Agency, based in Paris, acts as energy policy advisor to 30 member countries in their effort to ensure reliable, affordable and clean energy for their citizens. Founded during the oil crisis of 1973-74, the initial role of the IEA was to co-ordinate measures in times of oil supply emergencies. As energy markets have changed, so has the IEA. Its mandate has broadened to incorporate the "Three E's" of balanced energy policy making: energy security, economic development and environmental protection. Current work focuses on climate change policies, market reform, energy technology collaboration and outreach to the rest of the world, especially major consumers and producers of energy like China, India, Russia and the OPEC countries.

The Energy Data Centre, with a staff of around 30 people, provides a dynamic environment for young people just finishing their studies or with one to two years of work experience.

Job description

The data officers/statisticians compile, verify and disseminate information on all aspects of energy including production, transformation and consumption of all fuels, energy efficiency indicators, CO₂ emissions, and energy prices and taxes. The data officers are responsible for the production of data sets through receiving, reviewing and inputting data submissions from member countries and other sources. They check for completeness, correct calculations, internal consistency, accuracy and consistency with definitions. Often this entails proactively investigating and helping to resolve anomalies in collaboration with national administrations. The data officers/statisticians also design and implement computer macros used in the preparation of their energy statistics publication(s) alongside analysis of the data.

Principal qualifications

- University degree in a topic relevant to energy, or statistics. We currently have staff with degrees in mathematics, statistics, information technology, economics, engineering, physics, environmental studies, etc.
- Experience in the basic use of databases and computer software. Experience in Visual Basic is an advantage.
- Ability to work accurately, pay attention to detail and work to deadlines; ability to deal simultaneously with a wide variety of tasks and to organise work efficiently.
- Good communication skills; ability to work well in a team and in a multicultural environment, particularly in liaising with contacts in national administrations and industry; ability to understand, and communicate data.
- An excellent written and oral command of English; knowledge of other languages would be an asset.
- Some knowledge of energy industry operations and terminology would also be an advantage, but is not required.

Nationals of any IEA member country are eligible for appointment. Basic salaries start at 3 300 euros per month. The possibilities for advancement are good for candidates with appropriate qualifications and experience. Tentative enquiries about future vacancies are welcomed from men and women with relevant qualifications and experience. Applications in English, accompanied by a curriculum vitae, should be sent to:

Office of Management and Administration
International Energy Agency
31-35 rue de la Fédération
75739 Paris Cedex 15, France

Online data services

Users can instantly access not only all the data published in this book, but also all the time series used for preparing this publication and all the other statistics publications of the IEA. The data are available online, either through annual subscription or pay-per-view access. More information on this service can be found on our website at <http://data.iea.org>.

Nine annual publications

■ World Energy Statistics 2018

World Energy Statistics provides comprehensive world energy statistics on all energy sources – coal, gas, oil, electricity, renewables and waste. It covers energy supply and consumption for 150 countries and regions, including all OECD countries, over 100 other key energy producing and consuming countries, as well as world totals and various regional aggregates. The book includes detailed tables by country in original units, and summary time series on production, trade, and final consumption by sector.

Published August 2018 - Price: Print €120; PDF €96

■ World Energy Balances 2018

World Energy Balances provides comprehensive energy balances for all the world's largest energy producing and consuming countries. It contains detailed data on the supply and consumption of energy for 150 countries and regions, including all OECD countries, over 100 other key energy producing and consuming countries, as well as world totals and various regional aggregates. The book includes graphs and detailed data by country for all energy sources – coal, gas, oil, electricity, renewables and waste - expressed in balance format. Alongside this, there are summary time series on production, trade, final consumption by sector, as well as key energy and economic indicators and an overview of trends in global energy production and use.

Published August 2018 - Price: Print €120; PDF €96

■ Coal Information 2018

Coal Information provides a comprehensive review of historical and current market trends in the world coal sector. It provides an overview of world coal developments covering coal production and coal reserves, coal demand by type, coal trade and coal prices. A detailed and comprehensive statistical picture of historical and current coal developments in the 35 OECD member countries, by region and individually is presented in tables and charts. Complete coal balances and coal trade data for selected years are presented on 22 major non-OECD coal-producing and -consuming countries, with summary statistics on coal supply and end-use statistics for about 40 countries and regions worldwide.

Published August 2018 - Price: Print €165; PDF €132

■ Electricity Information 2018

Electricity Information provides a comprehensive review of historical and current market trends in the OECD electricity sector. It provides an overview of the world electricity developments covering world electricity and heat production, input fuel mix, supply and consumption, and electricity imports and exports. More detail is provided for the 35 OECD countries with information covering production, installed capacity, input energy mix to electricity and heat production, consumption, electricity trades, input fuel prices and end-user electricity prices. It provides comprehensive statistical details on overall energy consumption, economic indicators, electricity and heat production by energy form and plant type, electricity imports and exports, sectoral energy and electricity consumption, as well as prices for electricity and electricity input fuels for each country and regional aggregate.

Published August 2018 - Price: Print €150; PDF €120

■ Natural Gas Information 2018

Natural Gas Information is a detailed reference work on gas supply and demand covering OECD countries and the rest of the world. The publication contains essential information on LNG and pipeline trade, gas reserves, storage capacity and prices. The main part of the book concentrates on OECD countries, showing a detailed supply and demand balance for each country and for the three OECD regions: Americas, Asia-Oceania and Europe, as well as a breakdown of gas consumption by end user. Import and export data are reported by source and destination.

Published August 2018 - Price: Print €165; PDF €132

■ Oil Information 2018

Oil Information is a comprehensive reference book on current developments in oil supply and demand. This publication contains key data on world production, trade, prices and consumption of major oil product groups, with time series back to the early 1970s. Its core consists of a detailed and comprehensive picture of oil supply, demand, trade, production and consumption by end-user for each OECD country individually and for the OECD regions. Trade data are reported extensively by origin and destination.

Published August 2018 - Price: Print €165; PDF €132

■ Renewables Information 2018

Renewables Information provides a comprehensive review of historical and current market trends in OECD countries. It provides an overview of the development of renewables and waste in the world since 1990. A greater focus is given to the OECD countries with a review of electricity generation and capacity from renewable and waste energy sources, including detailed tables. However, an overview of developments in the world and OECD renewable and waste market is also presented. The publication encompasses energy indicators, generating capacity, electricity and heat production from renewable and waste sources, as well as production and consumption of renewables and waste.

Published August 2018 - Price: Print €110; PDF €88

■ CO₂ Emissions from Fuel Combustion 2018

CO₂ Emissions from Fuel Combustion provides a full analysis of emissions stemming from energy use. The data in this book cover the emissions of CO₂ for 150 countries and regions by sector and by fuel. The publication contains estimates of CO₂ emissions, selected indicators such as CO₂/GDP, CO₂/capita and CO₂/TPES and a decomposition of CO₂ emissions into driving factors for more than 150 countries and regions. Emissions are calculated using IEA energy databases and the default methods and emission factors from the *2006 IPCC Guidelines for National Greenhouse Gas Inventories*.

Published November 2018 - Price: Print €165; PDF €132

■ Energy Efficiency Indicators Highlights 2018

Energy Efficiency Indicators Highlights is designed to help understand what drives final energy use in IEA member countries in order to improve and track national energy efficiency policies. It provides the first comprehensive selection of data that the IEA has been collecting each year after its member states recognised in 2009 the need to better monitor energy efficiency policies. The report includes country-specific analysis of end uses across the largest sectors – residential, services, industry and transport. It answers questions such as:

- What are the largest drivers for energy use trends in each country?
- Was energy saved because of efficiency progress over time?
- How much energy is used for space heating, appliances or cooking?
- What are the most energy-intensive industries?

Improving energy efficiency is a critical step for governments to take to move towards a sustainable energy system. This report highlights the key role of end-use energy data and indicators in monitoring progress in energy efficiency around the world.

Published December 2018 - Free pdf

Two quarterlies

■ Oil, Gas, Coal and Electricity

Oil, Gas, Coal and Electricity provides detailed and up-to-date quarterly statistics on oil, natural gas, coal and electricity for the OECD countries. Oil statistics cover production, trade, refinery intake and output, stock changes and consumption for crude oil, NGL and nine selected product groups. Statistics for electricity, natural gas and coal show supply and trade. Oil and coal import and export data are reported by origin and destination. Gas imports and exports data are reported by entries and exits of physical flows. Moreover, oil and coal production are reported on a worldwide basis.

Published Quarterly - Price €120, annual subscription: Print €380; PDF €304

■ Energy Prices and Taxes

Energy Prices and Taxes provides up-to-date information on prices and taxes in national and international energy markets. It contains crude oil import prices by crude stream, industry prices and consumer prices. The end-user prices for OECD member countries cover main oil products, gas, coal and electricity. Every issue includes full notes on sources and methods and a description of price and tax components in each country.

Published Quarterly - Price €120, annual subscription: Print €380; PDF €304

Electronic editions

To complement its publications, the Energy Data Centre produces online data services containing the complete databases which are used for preparing the statistics publications. Built-in software allows you to access and manipulate all these data in a very user-friendly manner and includes graphic facilities.

Annual Databases

- World Energy Statistics 2018 Price: €800 (single user)
- World Energy Balances 2018 Price: €800 (single user)
- **World Energy Statistics and Balances 2018** Price: €1 400 (single user)
(Combined subscription of the above two series)
- Coal Information 2018 Price: €550 (single user)
- Electricity Information 2018 Price: €550 (single user)
- Natural Gas Information 2018 Price: €550 (single user)
- Oil Information 2018 Price: €550 (single user)
- Renewables Information 2018 Price: €400 (single user)
- CO₂ Emissions from Fuel Combustion 2018 Price: €400 (single user)
- Energy Efficiency Indicators 2018 Price: €400 (single user)

Quarterly Databases

- Energy Prices and Taxes Price: (four quarters) €900 (single user)

Other services

■ Emissions Factors 2018

The *Emissions Factors* database includes a series of indicators related to emissions from electricity and heat generation for over 150 countries and regions, based on the IEA *World Energy Balances* and *CO₂ Emissions from Fuel Combustion* data. The main factors included are: CO₂, CH₄ and N₂O emissions per kWh of electricity and heat; adjustments due trade (for OECD) and to losses; emission factors by fuel for sectors other than electricity. The database is available in Excel format.

Price: €550 (single user)

■ World Energy Prices 2018

The *World Energy Prices* data service contains annual end-use energy prices for selected products and sectors for over one hundred countries in the world. Complementing the quarterly OECD *Energy Prices and Taxes*, the world database focuses on prices for gasoline and diesel for transport; as well as electricity for households and industry.

Price: €400 (single user)

■ Energy Prices & Taxes and World Energy Prices package

This service is a package containing both the *Energy Prices and Taxes* and *World Energy Prices* online data services offered at a reduced rate.

Price: €1 100 (single user)

Detailed descriptions of all these data services are available on our website at <http://data.iea.org>.

■ The Monthly Oil Data Service

The *Monthly Oil Data Service* provides the detailed databases of historical and projected information which is used in preparing the IEA's monthly *Oil Market Report* (OMR). The *Monthly Oil Data Service* is available as an annual subscription and includes twelve monthly updates. The service comprises three packages available separately or combined. The data are released on the same day as the official release of the *Oil Market Report*.

The packages include:

- | | |
|---------------------------------------|------------------------------------|
| ■ Supply, Demand, Balances and Stocks | Price: €6 150 (single user) |
| ■ Trade | Price: €2 050 (single user) |
| ■ Field-by-Field Supply | Price: €3 080 (single user) |
| ■ Complete Service | Price: €9 200 (single user) |

A description of this service is available on our website at www.iea.org/statistics/mods.

■ The Monthly Gas Data Service

The *Monthly Gas Data Service* provides the following monthly natural gas data for OECD countries:

- Supply balances in terajoules and cubic metres;
- Production, trade, stock changes and levels where available, gross inland deliveries, own use and losses;
- Highly detailed trade data with about 50 import origins and export destinations;
- LNG trade detail available from January 2002,
- From 2011 onwards, transit volumes are included and trade data corresponds to entries/exits.

The databases cover the time period January 1984 to current month with a time lag of two months for the most recent data.

Price: €800 (single user)

For more information consult www.iea.org/statistics/mgds.

Moreover, the IEA statistics website contains a wealth of free statistics covering oil, natural gas, coal, electricity, renewables, energy-related CO₂ emissions and more for 150 countries and regions and historic data for the last 20 years. It also contains Sankey flows to enable users to explore visually how a country's energy balance shifts over up to 40 years, starting with production and continuing through transformation to see important changes in supply mix or share of consumption. The IEA Energy Atlas offers panoramas on every aspect of energy on a global basis and for 150 individual countries, with interactive maps and customisable charts that detail and compare a host of data based on the Agency's authoritative statistics. The website also includes free headline energy data in excel format for all OECD countries and global regions from 1971 onwards as well as for Association countries from 1990 onwards.

The IEA statistics website can be accessed at www.iea.org/statistics/
