5) CO₂ from energy use only; sectoral approach; international marine and aviation bunkers are excluded.

6) Waste from manufacturing industries.

7) CAN, NZL: household waste only.

8) Waste from spent fuel arising in nuclear power plants, in tonnes of heavy metal, per million tonnes of oil equivalent of total primary energy supply.

UKD: pesticides and threatened species: Great Britain; water withdrawal and public waste water treatment plants: England and Wales.

PHYSICAL CONTEXT

The *Republic of Ireland* is bounded on the west and south by the Atlantic Ocean and on the north by Northern Ireland. The Atlantic waters lying off the south coast are known as the Celtic Sea. To the east is the Irish Sea, which separates the island of Ireland from Great Britain. The Republic of Ireland has an area of 70 282 km². Its widest extensions are 486 kilometres north-south and 275 kilometres east-west.

Ireland is a *lowland country*. Several coastal mountain ranges surround the broad central calcareous plain, whose flatness is relieved in many places by low hills and ridges. The country's highest point is Carrantwohil (1 041 metres). Much of the 7 100 kilometre coastline is heavily indented, particularly along the entire western seaboard. The *climate* is temperate oceanic, influenced by a combination of the warm North Atlantic drift and prevailing winds from the south-west. It has a markedly maritime character; the range of mean temperatures over the year is relatively narrow, from 5 °C in winter to 15 °C in summer. Mean annual rainfall is 1 000 to 1 400 mm in the west and 750 to 1 000 mm in the east, while 2 000 mm is not uncommon in some mountain areas.

The Shannon, Ireland's longest river (370 kilometres), and several other rivers flow slowly through the central plain. The rivers on the seaward side of the mountain ranges are short and flow rapidly to the sea. Including approximately 6 000 lakes, *inland surface waters* cover 2% of the country's total area and provide rich fishery resources.

Ireland has one of the highest proportions of *land* devoted to agriculture in Europe. Grassland, mainly grazed by beef and dairy herds (16 million head of cattle and sheep), covers 44% of total land area; arable and permanent crop land covers nearly 18%, and forest and other wooded land nearly 10%. There are extensive bogs in some parts of the country. Over the last decade, the amount of cropland has increased by 18%; there has been a 10% decrease in permanent grassland and a 27% increase in forested area.

Ireland has some offshore *natural gas resources*. However, the Kinsale Head gas supply (off the south coast) is on the decline, and the opening of the Corrib field (off the north-west coast), which was discovered 1997, has been delayed. Ireland remains highly dependent on energy imports, predominantly oil.
