SPSS® Macro

Introduction	240
Structure of the SPSS® Macro	240

INTRODUCTION

This chapter presents the 19 SPSS® macros used in the previous chapters. These are also available from www.pisa.oecd.org. Table 17.1 presents a summary of the 19 SPSS® macros. The file names are in blue and the macro names as well as their arguments are in black.

STRUCTURE OF THE SPSS® MACROS

All the macros have five common arguments:

- NREP =
- WGT =
- RWGT =
- CONS =
- INFILE =

The other arguments are specific to a particular macro. These specific arguments were explained in the previous chapters.

All SPSS® macros have the same structure.

- The first step consists of:
 - Reading in the INFILE data file and dropping all variables that are not necessary for the analysis.
- The second step is the iterative part of the macro:
 - The SPSS® procedure for computing the estimate is repeated 81 times or 405 times, depending on the procedure; and
 - At each run, the results are stored in a temporary file. The number of the replicate and the number of the plausible values if needed are then combined in one file.
- The fourth step is devoted to the computation of the final statistic and its respective standard error:
 - The squared differences between the final estimate and the 80 replicates are computed;
 - The sum of the squared difference is computed and divided by 20; and
 - Final estimates, the sampling variance estimates and, in the case of the plausible values, the measurement variance are computed.
- The final step flags the statistics for not reaching minimum sample size requirements that researchers set. This step is not included in some macros.
 - The unweighted numbers of students, the unweighted number of schools and the weighted percentage of the population are firstly computed per population estimates returned by the macro;
 - The unweighted number of schools and the weighted percentage of the population are then compared with the benchmarks provided by the researchers; and
 - If these numbers are below the benchmarks, the results are flagged.

The SPSS® syntax is presented hereafter.

Table 17.1
Synthesis of the 19 SPSS® macros

FOREWORD	3
USER'S GUIDE	17
CHAPTER 1 THE USEFULNESS OF PISA DATA FOR POLICY MAKERS, RESEARCHERS AND EXPERTS ON METHODOLOGY	19
PISA – an overview	20
■ The PISA surveys	20
How can PISA contribute to educational policy, practice and research?	22
■ Key results from PISA 2000, PISA 2003 and PISA 2006	23
Further analyses of PISA datasets	25
■ Contextual framework of PISA 2006	28
■ Influence of the methodology on outcomes	31
CHAPTER 2 EXPLORATORY ANALYSIS PROCEDURES	35
Introduction	36
Weights	36
Replicates for computing the standard error	39
Plausible values	43
Conclusion	45
CHAPTER 3 SAMPLE WEIGHTS	47
Introduction	48
Weights for simple random samples	49
Sampling designs for education surveys	51
Why do the PISA weights vary?	55
Conclusion	56
CHAPTER 4 REPLICATE WEIGHTS	57
Introduction	58
Sampling variance for simple random sampling	58
Sampling variance for two-stage sampling	63
Replication methods for simple random samples	68
Replication methods for two-stage samples	70
■ The Jackknife for unstratified two-stage sample designs	70
■ The Jackknife for stratified two-stage sample designs	71
■ The Balanced Repeated Replication method	72
Other procedures for accounting for clustered samples	74
Conclusion	74

CHAPTER 5 THE RASCH MODEL	77
Introduction	78
How can the information be summarised?	78
The Rasch Model for dichotomous items	79
▪ Introduction to the Rasch Model	79
▪ Item calibration	83
▪ Computation of a student's score	85
▪ Computation of a student's score for incomplete designs	89
▪ Optimal conditions for linking items	90
▪ Extension of the Rasch Model	91
Other item response theory models	92
Conclusion	92
CHAPTER 6 PLAUSIBLE VALUES	93
Individual estimates versus population estimates	94
The meaning of plausible values (PVs)	94
Comparison of the efficiency of WLEs, EAP estimates and PVs for the estimation of some population statistics	97
How to perform analyses with plausible values	100
Conclusion	101
CHAPTER 7 COMPUTATION OF STANDARD ERRORS	103
Introduction	104
The standard error on univariate statistics for numerical variables	104
The SPSS® macro for computing the standard error on a mean	107
The standard error on percentages	110
The standard error on regression coefficients	112
The standard error on correlation coefficients	114
Conclusion	115
CHAPTER 8 ANALYSES WITH PLAUSIBLE VALUES	117
Introduction	118
Univariate statistics on plausible values	118
The standard error on percentages with PVs	121
The standard error on regression coefficients with PVs	121
The standard error on correlation coefficients with PVs	124
Correlation between two sets of plausible values	124
A fatal error shortcut	128
An unbiased shortcut	129
Conclusion	130
CHAPTER 9 USE OF PROFICIENCY LEVELS	133
Introduction	134
Generation of the proficiency levels	134
Other analyses with proficiency levels	139
Conclusion	141

CHAPTER 10 ANALYSES WITH SCHOOL-LEVEL VARIABLES	143
Introduction.....	144
Limits of the PISA school samples.....	145
Merging the school and student data files.....	146
Analyses of the school variables.....	146
Conclusion.....	148
CHAPTER 11 STANDARD ERROR ON A DIFFERENCE	149
Introduction.....	150
Statistical issues and computing standard errors on differences.....	150
The standard error on a difference without plausible values.....	152
The standard error on a difference with plausible values.....	157
Multiple comparisons.....	161
Conclusion.....	162
CHAPTER 12 OECD TOTAL AND OECD AVERAGE	163
Introduction.....	164
Recoding of the database to estimate the pooled OECD total and the pooled OECD average.....	166
Duplication of the data to avoid running the procedure three times.....	168
Comparisons between the pooled OECD total or pooled OECD average estimates and a country estimate.....	169
Comparisons between the arithmetic OECD total or arithmetic OECD average estimates and a country estimate.....	171
Conclusion.....	171
CHAPTER 13 TRENDS	173
Introduction.....	174
The computation of the standard error for trend indicators on variables other than performance	175
The computation of the standard error for trend indicators on performance variables	177
Conclusion.....	181
CHAPTER 14 STUDYING THE RELATIONSHIP BETWEEN STUDENT PERFORMANCE AND INDICES DERIVED FROM CONTEXTUAL QUESTIONNAIRES	183
Introduction.....	184
Analyses by quarters	184
The concept of relative risk.....	186
<ul style="list-style-type: none"> ▪ Instability of the relative risk..... ▪ Computation of the relative risk..... 	187
Effect size.....	191
Linear regression and residual analysis.....	193
<ul style="list-style-type: none"> ▪ Independence of errors 	193
Statistical procedure.....	196
Conclusion.....	197

CHAPTER 15 MULTILEVEL ANALYSES	199
Introduction	200
Two-level modelling with SPSS®	202
▪ Decomposition of the variance in the empty model.....	202
▪ Models with only random intercepts.....	205
▪ Shrinkage factor.....	207
▪ Models with random intercepts and fixed slopes.....	207
▪ Models with random intercepts and random slopes.....	209
▪ Models with Level 2 independent variables.....	214
▪ Computation of final estimates and their respective standard errors.....	217
Three-level modelling	219
Limitations of the multilevel model in the PISA context	221
Conclusion	222
CHAPTER 16 PISA AND POLICY RELEVANCE – THREE EXAMPLES OF ANALYSES	223
Introduction	224
Example 1: Gender differences in performance	224
Example 2: Promoting socio-economic diversity within school?	228
Example 3: The influence of an educational system on the expected occupational status of students at age 30	234
Conclusion	237
CHAPTER 17 SPSS® MACRO	239
Introduction	240
Structure of the SPSS® Macro	240
REFERENCES	321
APPENDICES	323
Appendix 1 Three-level regression analysis	324
Appendix 2 PISA 2006 International database	332
Appendix 3 PISA 2006 Student questionnaire	341
Appendix 4 PISA 2006 Information communication technology (ICT) Questionnaire	350
Appendix 5 PISA 2006 School questionnaire	352
Appendix 6 PISA 2006 Parent questionnaire	359

LIST OF BOXES

Box 2.1	WEIGHT statement in SPSS®	37
Box 7.1	SPSS® syntax for computing 81 means (e.g. PISA 2003).....	104
Box 7.2	SPSS® syntax for computing the mean of HISEI and its standard error (e.g. PISA 2003).....	107
Box 7.3	SPSS® syntax for computing the standard deviation of HISEI and its standard error by gender (e.g. PISA 2003).....	109
Box 7.4	SPSS® syntax for computing the percentages and their standard errors for gender (e.g. PISA 2003)	110
Box 7.5	SPSS® syntax for computing the percentages and its standard errors for grades by gender (e.g. PISA 2003).....	112
Box 7.6	SPSS® syntax for computing regression coefficients, R ² and its respective standard errors: Model 1 (e.g. PISA 2003).....	113
Box 7.7	SPSS® syntax for computing regression coefficients, R ² and its respective standard errors: Model 2 (e.g. PISA 2003).....	114
Box 7.8	SPSS® syntax for computing correlation coefficients and its standard errors (e.g. PISA 2003).....	114
Box 8.1	SPSS® syntax for computing the mean on the science scale by using the MCR_SE_UNIV macro (e.g. PISA 2006).....	119
Box 8.2	SPSS® syntax for computing the mean and its standard error on PVs (e.g. PISA 2006).....	120
Box 8.3	SPSS® syntax for computing the standard deviation and its standard error on PVs by gender (e.g. PISA 2006).....	131
Box 8.4	SPSS® syntax for computing regression coefficients and their standard errors on PVs by using the MCR_SE_REG macro (e.g. PISA 2006).....	122
Box 8.5	SPSS® syntax for running the simple linear regression macro with PVs (e.g. PISA 2006).....	123
Box 8.6	SPSS® syntax for running the correlation macro with PVs (e.g. PISA 2006).....	124
Box 8.7	SPSS® syntax for the computation of the correlation between mathematics/quantity and mathematics/space and shape by using the MCR_SE_COR_2PV macro (e.g. PISA 2003).....	126
Box 9.1	SPSS® syntax for generating the proficiency levels in science (e.g. PISA 2006)	135
Box 9.2	SPSS® syntax for computing the percentages of students by proficiency level in science and its standard errors (e.g. PISA 2006).....	136
Box 9.3	SPSS® syntax for computing the percentage of students by proficiency level in science and its standard errors (e.g. PISA 2006).....	138
Box 9.4	SPSS® syntax for computing the percentage of students by proficiency level and its standard errors by gender (e.g. PISA 2006)	138
Box 9.5	SPSS® syntax for generating the proficiency levels in mathematics (e.g. PISA 2003).....	139
Box 9.6	SPSS® syntax for computing the mean of self-efficacy in mathematics and its standard errors by proficiency level (e.g. PISA 2003).....	140
Box 10.1	SPSS® syntax for merging the student and school data files (e.g. PISA 2006).....	146
Box 10.2	Question on school location in PISA 2006.....	147
Box 10.3	SPSS® syntax for computing the percentage of students and the average performance in science, by school location (e.g. PISA 2006)	147
Box 11.1	SPSS® syntax for computing the mean of job expectations by gender (e.g. PISA 2003).....	152
Box 11.2	SPSS® macro for computing standard errors on differences (e.g. PISA 2003).....	155

Box 11.3	Alternative SPSS® macro for computing the standard error on a difference for a dichotomous variable (e.g. PISA 2003).....	156
Box 11.4	SPSS® syntax for computing standard errors on differences which involve PVs (e.g. PISA 2003).....	158
Box 11.5	SPSS® syntax for computing standard errors on differences that involve PVs (e.g. PISA 2006).....	160
Box 12.1	SPSS® syntax for computing the pooled OECD total for the mathematics performance by gender (e.g. PISA 2003).....	166
Box 12.2	SPSS® syntax for the pooled OECD average for the mathematics performance by gender (e.g. PISA 2003).....	167
Box 12.3	SPSS® syntax for the creation of a larger dataset that will allow the computation of the pooled OECD total and the pooled OECD average in one run (e.g. PISA 2003).....	168
Box 14.1	SPSS® syntax for the quarter analysis (e.g. PISA 2006).....	185
Box 14.2	SPSS® syntax for computing the relative risk with five antecedent variables and five outcome variables (e.g. PISA 2006).....	189
Box 14.3	SPSS® syntax for computing the relative risk with one antecedent variable and one outcome variable (e.g. PISA 2006).....	190
Box 14.4	SPSS® syntax for computing the relative risk with one antecedent variable and five outcome variables (e.g. PISA 2006).....	190
Box 14.5	SPSS® syntax for computing effect size (e.g. PISA 2006).....	192
Box 14.6	SPSS® syntax for residual analyses (e.g. PISA 2003)	196
Box 15.1	Normalisation of the final student weights (e.g. PISA 2006)	203
Box 15.2	SPSS® syntax for the decomposition of the variance in student performance in science (e.g. PISA 2006).....	203
Box 15.3	SPSS® syntax for normalising PISA 2006 final student weights with deletion of cases with missing values and syntax for variance decomposition (e.g. PISA 2006).....	206
Box 15.4	SPSS® syntax for a multilevel regression model with random intercepts and fixed slopes (e.g. PISA 2006).....	208
Box 15.5	Results for the multilevel model in Box 15.4.....	208
Box 15.6	SPSS® syntax for a multilevel regression model (e.g. PISA 2006).....	210
Box 15.7	Results for the multilevel model in Box 15.6.....	211
Box 15.8	Results for the multilevel model with covariance between random parameters	212
Box 15.9	Interpretation of the within-school regression coefficient	214
Box 15.10	SPSS® syntax for a multilevel regression model with a school-level variable (e.g. PISA 2006)	214
Box 15.11	SPSS® syntax for a multilevel regression model with interaction (e.g. PISA 2006).....	215
Box 15.12	Results for the multilevel model in Box 15.11	216
Box 15.13	SPSS® syntax for using the multilevel regression macro (e.g. PISA 2006)	217
Box 15.14	SPSS® syntax for normalising the weights for a three-level model (e.g. PISA 2006).....	219
Box 16.1	SPSS® syntax for testing the gender difference in standard deviations of reading performance (e.g. PISA 2000).....	225
Box 16.2	SPSS® syntax for computing the 5th percentile of the reading performance by gender (e.g. PISA 2000).....	227
Box 16.3	SPSS® syntax for preparing a data file for the multilevel analysis	230

Box 16.4	SPSS® syntax for running a preliminary multilevel analysis with one PV	231
Box 16.5	Estimates of fixed parameters in the multilevel model.....	231
Box 16.6	SPSS® syntax for running preliminary analysis with the MCR_ML_PV macro.....	233

LIST OF FIGURES

Figure 1.1	Relationship between social and academic segregations	27
Figure 1.2	Relationship between social segregation and the correlation between science performance and student HISEI	27
Figure 1.3	Conceptual grid of variable types	29
Figure 1.4	Two-dimensional matrix with examples of variables collected or available from other sources	30
<hr/>		
Figure 2.1	Science mean performance in OECD countries (PISA 2006).....	37
Figure 2.2	Gender differences in reading in OECD countries (PISA 2000).....	38
Figure 2.3	Regression coefficient of ESCS on mathematic performance in OECD countries (PISA 2003)	38
Figure 2.4	Design effect on the country mean estimates for science performance and for ESCS in OECD countries (PISA 2006)	41
Figure 2.5	Simple random sample and unbiased standard errors of ESCS on science performance in OECD countries (PISA 2006)	42

Figure 4.1	Distribution of the results of 36 students.....	58
Figure 4.2	Sampling variance distribution of the mean.....	60
Figure 5.1	Probability of success for two high jumpers by height (dichotomous).....	80
Figure 5.2	Probability of success for two high jumpers by height (continuous).....	81
Figure 5.3	Probability of success to an item of difficulty zero as a function of student ability	81
Figure 5.4	Student score and item difficulty distributions on a Rasch continuum.....	84
Figure 5.5	Response pattern probabilities for the response pattern (1, 1, 0, 0).....	86
Figure 5.6	Response pattern probabilities for a raw score of 1	87
Figure 5.7	Response pattern probabilities for a raw score of 2	88
Figure 5.8	Response pattern probabilities for a raw score of 3	88
Figure 5.9	Response pattern likelihood for an easy test and a difficult test.....	89
Figure 5.10	Rasch item anchoring.....	90
Figure 6.1	Living room length expressed in integers.....	94
Figure 6.2	Real length per reported length.....	95
Figure 6.3	A posterior distribution on a test of six items.....	96
Figure 6.4	EAP estimators	97
Figure 8.1	A two-dimensional distribution.....	125
Figure 8.2	Axes for two-dimensional normal distributions	125
Figure 13.1	Trend indicators in PISA 2000, PISA 2003 and PISA 2006.....	175
Figure 14.1	Percentage of schools by three school groups (PISA 2003).....	194
Figure 15.1	Simple linear regression analysis versus multilevel regression analysis	201
Figure 15.2	Graphical representation of the between-school variance reduction.....	209
Figure 15.3	A random multilevel model.....	210
Figure 15.4	Change in the between-school residual variance for a fixed and a random model.....	212
Figure 16.1	Relationship between the segregation index of students' expected occupational status and the segregation index of student performance in reading (PISA 2000).....	236
Figure 16.2	Relationship between the segregation index of students' expected occupational status and the correlation between HISEI and students' expected occupational status.....	236

LIST OF TABLES

Table 1.1	Participating countries/economies in PISA 2000, PISA 2003, PISA 2006 and PISA 2009	21
Table 1.2	Assessment domains covered by PISA 2000, PISA 2003 and PISA 2006	22
Table 1.3	Correlation between social inequities and segregations at schools for OECD countries.....	28
Table 1.4	Distribution of students per grade and per ISCED level in OECD countries (PISA 2006).....	31
Table 2.1	Design effect and type I errors.....	40
Table 2.2	Mean estimates and standard errors.....	44

Table 2.3	Standard deviation estimates and standard errors.....	44
Table 2.4	Correlation estimates and standard errors.....	45
Table 2.5	ESCS regression coefficient estimates and standard errors.....	45
Table 3.1	Height and weight of ten persons	50
Table 3.2	Weighted and unweighted standard deviation estimate	50
Table 3.3	School, within-school, and final probability of selection and corresponding weights for a two-stage, simple random sample with the first-stage units being schools of equal size.....	52
Table 3.4	School, within-school, and final probability of selection and corresponding weights for a two-stage, simple random sample with the first-stage units being schools of unequal size	52
Table 3.5	School, within-school, and final probability of selection and corresponding weights for a simple and random sample of schools of unequal size (smaller schools)	53
Table 3.6	School, within-school, and final probability of selection and corresponding weights for a simple and random sample of schools of unequal size (larger schools)	53
Table 3.7	School, within-school, and final probability of selection and corresponding weights for PPS sample of schools of unequal size.....	54
Table 3.8	Selection of schools according to a PPS and systematic procedure.....	55
Table 4.1	Description of the 630 possible samples of 2 students selected from 36 students, according to their mean.....	59
Table 4.2	Distribution of all possible samples with a mean between 8.32 and 11.68.....	61
Table 4.3	Distribution of the mean of all possible samples of 4 students out of a population of 36 students	62
Table 4.4	Between-school and within-school variances on the mathematics scale in PISA 2003.....	65
Table 4.5	Current status of sampling errors.....	65
Table 4.6	Between-school and within-school variances, number of participating schools and students in Denmark and Germany in PISA 2003	66
Table 4.7	The Jackknives replicates and sample means.....	68
Table 4.8	Values on variables X and Y for a sample of ten students.....	69
Table 4.9	Regression coefficients for each replicate sample.....	69
Table 4.10	The Jackknife replicates for unstratified two-stage sample designs.....	70
Table 4.11	The Jackknife replicates for stratified two-stage sample designs.....	71
Table 4.12	Replicates with the Balanced Repeated Replication method.....	72
Table 4.13	The Fay replicates.....	73
Table 5.1	Probability of success when student ability equals item difficulty.....	82
Table 5.2	Probability of success when student ability is less than the item difficulty by 1 unit.....	82
Table 5.3	Probability of success when student ability is greater than the item difficulty by 1 unit	82
Table 5.4	Probability of success when student ability is less than the item difficulty by 2 units	83
Table 5.5	Probability of success when student ability is greater than the item difficulty by 2 units.....	83
Table 5.6	Possible response pattern for a test of four items.....	85
Table 5.7	Probability for the response pattern (1, 1, 0, 0) for three student abilities.....	85
Table 5.8	Probability for the response pattern (1, 0) for two students of different ability in an incomplete test design.....	89
Table 5.9	PISA 2003 test design	91

Table 6.1	Structure of the simulated data.....	98
Table 6.2	Means and variances for the latent variables and the different student ability estimators.....	98
Table 6.3	Percentiles for the latent variables and the different student ability estimators.....	99
Table 6.4	Correlation between HISEI, gender and the latent variable, the different student ability estimators.....	99
Table 6.5	Between- and within-school variances.....	100
Table 7.1	HISEI mean estimates	105
Table 7.2	Squared differences between replicate estimates and the final estimate	106
Table 7.3	Output data file from Box 7.2.....	108
Table 7.4	Available statistics with the UNIVAR macro	109
Table 7.5	Output data file from Box 7.3.....	109
Table 7.6	Output data file from Box 7.4.....	110
Table 7.7	Percentage of girls for the final and replicate weights and squared differences	111
Table 7.8	Output data file from Box 7.5.....	112
Table 7.9	Output data file from Box 7.6.....	113
Table 7.10	Output data file from Box 7.7.....	114
Table 7.11	Output data file from Box 7.8.....	114
Table 8.1	The 405 mean estimates.....	118
Table 8.2	Mean estimates and their respective sampling variances on the science scale for Belgium (PISA 2006).....	119
Table 8.3	Output data file from Box 8.2.....	121
Table 8.4	Output data file from Box 8.3.....	121
Table 8.5	The 450 regression coefficient estimates.....	123
Table 8.6	HISEI regression coefficient estimates and their respective sampling variance on the science scale in Belgium after accounting for gender (PISA 2006).....	123
Table 8.7	Output data file from Box 8.5.....	123
Table 8.8	Output data file from Box 8.6.....	124
Table 8.9	Correlation between the five plausible values for each domain, mathematics/quantity and mathematics/space and shape.....	126
Table 8.10	The five correlation estimates between mathematics/quantity and mathematics/space and shape and their respective sampling variance.....	127
Table 8.11	Standard deviations for mathematics scale using the correct method (plausible values) and by averaging the plausible values at the student level (pseudo-EAP) (PISA 2003).....	128
Table 8.12	Unbiased shortcut for a population estimate and its standard error	129
Table 8.13	Standard errors from the full and shortcut computation (PISA 2006).....	130
Table 9.1	The 405 percentage estimates for a particular proficiency level	136
Table 9.2	Estimates and sampling variances per proficiency level in science for Germany (PISA 2006)	137
Table 9.3	Final estimates of the percentage of students, per proficiency level, in science and its standard errors for Germany (PISA 2006)	137
Table 9.4	Output data file from Box 9.3	138
Table 9.5	Output data file from Box 9.4	138
Table 9.6	Mean estimates and standard errors for self-efficacy in mathematics per proficiency level (PISA 2003).....	141
Table 9.7	Output data file from Box 9.6	141

Table 10.1	Percentage of students per grade and ISCED level, by country (PISA 2006).....	144
Table 10.2	Output data file from the first model in Box 10.3	148
Table 10.3	Output data file from the second model in Box 10.3.....	148
Table 11.1	Output data file from Box 11.1	153
Table 11.2	Mean estimates for the final and 80 replicate weights by gender (PISA 2003)	153
Table 11.3	Difference in estimates for the final weight and 80 replicate weights between females and males (PISA 2003)	155
Table 11.4	Output data file from Box 11.2	156
Table 11.5	Output data file from Box 11.3	157
Table 11.6	Gender difference estimates and their respective sampling variances on the mathematics scale (PISA 2003)	157
Table 11.7	Output data file from Box 11.4	158
Table 11.8	Gender differences on the mathematics scale, unbiased standard errors and biased standard errors (PISA 2003)	159
Table 11.9	Gender differences in mean science performance and in standard deviation for science performance (PISA 2006)	159
Table 11.10	Regression coefficient of HISEI on the science performance for different models (PISA 2006).....	160
Table 11.11	Cross tabulation of the different probabilities.....	161
Table 12.1	Regression coefficients of the index of instrumental motivation in mathematics on mathematic performance in OECD countries (PISA 2003)	165
Table 12.2	Output data file from Box 12.1	166
Table 12.3	Output data file from Box 12.2	167
Table 12.4	Difference between the country mean scores in mathematics and the OECD total and average (PISA 2003)	170
Table 13.1	Trend indicators between PISA 2000 and PISA 2003 for HISEI, by country	176
Table 13.2	Linking error estimates.....	178
Table 13.3	Mean performance in reading by gender in Germany	180
Table 14.1	Distribution of the questionnaire index of cultural possession at home in Luxembourg (PISA 2006)	184
Table 14.2	Output data file from Box 14.1	186
Table 14.3	Labels used in a two-way table	186
Table 14.4	Distribution of 100 students by parents' marital status and grade repetition	187
Table 14.5	Probabilities by parents' marital status and grade repetition.....	187
Table 14.6	Relative risk for different cutpoints	187
Table 14.7	Output data file from Box 14.2	189
Table 14.8	Mean and standard deviation for the student performance in reading by gender, gender difference and effect size (PISA 2006)	191
Table 14.9	Output data file from the first model in Box 14.5	197
Table 14.10	Output data file from the second model in Box 14.5.....	197
Table 14.11	Mean of the residuals in mathematics performance for the bottom and top quarters of the PISA index of economic, social and cultural status, by school group (PISA 2003).....	195

Table 15.1	Between- and within-school variance estimates and intraclass correlation (PISA 2006).....	204
Table 15.2	Fixed parameter estimates	211
Table 15.3	Variance/covariance estimates before and after centering.....	213
Table 15.4	Output data file of the fixed parameters file.....	215
Table 15.5	Average performance and percentage of students by student immigrant status and by type of school.....	216
Table 15.6	Variables for the four groups of students	216
Table 15.7	Comparison of the regression coefficient estimates and their standard errors in Belgium (PISA 2006).....	218
Table 15.8	Comparison of the variance estimates and their respective standard errors in Belgium (PISA 2006)	218
Table 15.9	Three-level regression analyses.....	220
Table 16.1	Differences between males and females in the standard deviation of student performance (PISA 2000).....	226
Table 16.2	Distribution of the gender differences (males – females) in the standard deviation of the student performance	226
Table 16.3	Gender difference on the PISA combined reading scale for the 5 th , 10 th , 90 th and 95 th percentiles (PISA 2000)	227
Table 16.4	Gender difference in the standard deviation for the two different item format scales in reading (PISA 2000)	228
Table 16.5	Random and fixed parameters in the multilevel model with student and school socio-economic background.....	229
Table 16.6	Random and fixed parameters in the multilevel model with socio-economic background and grade retention at the student and school levels.....	233
Table 16.7	Segregation indices and correlation coefficients by country (PISA 2000).....	234
Table 16.8	Segregation indices and correlation coefficients by country (PISA 2006).....	235
Table 16.9	Country correlations (PISA 2000).....	237
Table 16.10	Country correlations (PISA 2006).....	237
Table 17.1	Synthesis of the 19 SPSS® macros.....	241
Table A2.1	Cluster rotation design used to form test booklets for PISA 2006	332
Table A12.1	Mapping of ISCED to accumulated years of education.....	457
Table A12.2	ISCO major group white-collar/blue-collar classification	459
Table A12.3	ISCO occupation categories classified as science-related occupations	459
Table A12.4	Household possessions and home background indices.....	463
Table A12.5	Factor loadings and internal consistency of ESCS 2006 in OECD countries.....	473
Table A12.6	Factor loadings and internal consistency of ESCS 2006 in partner countries/economies.....	474

User's Guide

Preparation of data files

All data files (in text format) and the SPSS® control files are available on the PISA website (www.pisa.oecd.org).

SPSS® users

By running the SPSS® control files, the PISA data files are created in the SPSS® format. Before starting analysis in the following chapters, save the PISA 2000 data files in the folder of “c:\pisa2000\data\”, the PISA 2003 data files in “c:\pisa2003\data\”, and the PISA 2006 data files in “c:\pisa2006\data\”.

SPSS® syntax and macros

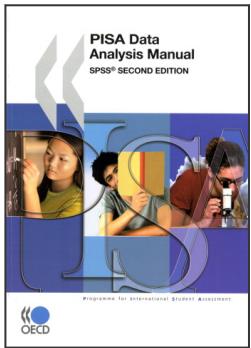

All syntaxes and macros in this manual can be copied from the PISA website (www.pisa.oecd.org). These macros were developed for SPSS 17.0. The 19 SPSS® macros presented in Chapter 17 need to be saved under “c:\pisa\macro\”, before starting analysis. Each chapter of the manual contains a complete set of syntaxes, which must be done sequentially, for all of them to run correctly, within the chapter.

Rounding of figures

In the tables and formulas, figures were rounded to a convenient number of decimal places, although calculations were always made with the full number of decimal places.

Country abbreviations used in this manual

AUS	Australia	FRA	France	MEX	Mexico
AUT	Austria	GBR	United Kingdom	NLD	Netherlands
BEL	Belgium	GRC	Greece	NOR	Norway
CAN	Canada	HUN	Hungary	NZL	New Zealand
CHE	Switzerland	IRL	Ireland	POL	Poland
CZE	Czech Republic	ISL	Iceland	PRT	Portugal
DEU	Germany	ITA	Italy	SVK	Slovak Republic
DNK	Denmark	JPN	Japan	SWE	Sweden
ESP	Spain	KOR	Korea	TUR	Turkey
FIN	Finland	LUX	Luxembourg	USA	United States
