

## Statistical Annex

### Sources and definitions

Most of the statistics shown in these tables can also be found in the OECD central data repository: OECD.Stat (<http://stats.oecd.org>), which contains both raw data and derived statistics.

This database contains longer time series and more detailed datasets by age group, gender, educational attainment, part-time employment, temporary employment, duration of unemployment, and other series than are shown in this annex, such as, employee job tenure, involuntary part-time employment, distribution of employment by weekly usual hours worked intervals, etc. The datasets include information on definitions, notes and sources used by member countries,

So far, data available for Brazil, the Russian Federation and South Africa are included in a number of tables in addition to data for 34 OECD countries. For recent years, data are annual averages of monthly and quarterly estimates based on labour force surveys, except for Tables B and C for Chile where they refer to fourth quarter for data prior to 2010 and annual averages since then. Data shown for a number of European countries in Tables B, C, E, F and H are taken from now on from the European Labour Force Survey (EULFS), which are more comparable and sometime more consistent over time than data series from national LFS (i.e. France).

Statistical tables showing data for Israel are supplemented with the following footnote: “The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law”.

Please note that the data on employment, unemployment and the labour force are not necessarily the same as the series used for analyses and forecasting by the OECD Economics Department that are reported in the *OECD Economic Outlook* and included in a number of charts and tables of Chapter 1 and Chapter 2 of this publication.

Interested users can refer to the online database ([www.oecd.org/employment/database](http://www.oecd.org/employment/database)), which contains data series on the labour market situation in OECD countries: population, labour force, employment and unemployment disaggregated by gender and age, educational attainment, employment status and sector of activity, participation and unemployment rates, statistics on part-time employment and duration of unemployment, job tenure, etc. The online database contains additional series on labour market performances and on features of institutional and regulatory environments affecting the functioning of labour markets. Among these are the following:

- Annual hours worked for comparisons of trends over time.
- Average gross annual wages per full-time equivalent employee.

- Distribution of gross earnings of full-time workers by earnings decile and by sex for earnings dispersion measures.
- Gross mean and median earnings of full-time workers by age group and gender.
- Statutory minimum wages.
- Public expenditure on labour market programmes, number of beneficiaries and inflows into the labour market.
- Trade union density rates in OECD member countries.

## Conventional signs

- . . Data not available
- . Decimal point
- | Break in series
- Nil or less than half of the last digit used.

### Major breaks in series

Table A: Breaks in series have been adjusted in most countries to ensure that harmonised unemployment rates are consistent over time.

Tables B to F and Table H: Most of the breaks in series mentioned below occurred for any of the following reasons: changes in survey design, survey questionnaire, survey frequency and administration, revisions of data series based on updated population census results. These changes have affected the comparability over time of employment and/or unemployment levels and to a certain extent the ratios reported in the aforementioned tables:

- *Introduction of a continuous survey producing quarterly results:* Austria (2003/04), Belgium (1998/99), Czech Republic (1996/1997), Denmark (1993/94), Estonia (1999/2000), Finland (1999/2000, monthly results), France (2002/03), Germany (2004/05), Greece (1997/98), Hungary (2005/06, monthly results), Iceland (2002/03), Ireland (1996/97/98), Italy (2003/04), Luxembourg (2002/03, quarterly results as of 2007), Netherlands (1999/2000), Norway (1995/96), Poland (1998/99/2000), Portugal (1997/98), Slovak Republic (1997/98), Slovenia (1996/97/98), Spain (1998/99), Sweden (1992/93, monthly results) and United Kingdom (1991/92).
- *Redesign of labour force survey:* Germany (2010/11), Greece (1997/98), Hungary (2002/03), Portugal (1997/98), Slovak Republic (1998/99), Spain (2004/05), Turkey (1999/2000 – half-yearly to quarterly results – 2004/05 monthly results). New survey in Mexico since 2005 (*Encuesta Nacional de Ocupación y Empleo*, ENOE) with a different questionnaire from that of the previous survey. Introduction of a new survey in Chile since April 2010 (see below).
- *Change in the operational definition of employment:*
  - ❖ Neat application of the criterion of “at least one hour worked in a gainful job” in the Chilean *Nueva Encuesta Nacional de Empleo* (NENE) from 2010 onward.
- *Change in the operational definition of unemployment regarding:*
  - ❖ Active job-search methods, in particular change from registration to contact with the public employment service: France (2002/03), Spain (2000/01).
  - ❖ Work availability criteria changed from the reference week to two weeks after the reference week to be consistent with the operational definition in other EU countries: Sweden (2004/05). This criterion did not exist prior to 2010 in the Chilean *Encuesta Nacional de Empleo* (ENE) and has been introduced in the *Nueva Encuesta Nacional de Empleo* (NENE) since 2010.
  - ❖ Persons on lay-off considered as employed instead of unemployed: Norway (2005/06).

### **Major breaks in series (cont.)**

- ❖ Duration of active job search changed from one week to four weeks: Korea (1999/2000). This change occurred in June 2005 and data were revised back since 2000 to take into account the new criteria. In Chile (2009/10), the duration of active job search has been shortened from last two months to previous four weeks including the survey week.
- ❖ Other minor changes: Australia (2000/01) and Poland (2003/04).
- *Changes in the questionnaire with impact on employment and unemployment estimates:* Germany (2010/11), new questionnaire design ensures better coverage of small jobs. This leads to higher than normal annual employment increase. Spain (2004/05) mainly increase in employment, and impact on unemployment estimates in Norway (2005/06) and Sweden (2004/05).
- *Change from seasonal to calendar quarters:* Czech Republic (1996/97), Slovak Republic (1999/2000), Switzerland (2009/10) and the United Kingdom (2005/06). However, there is no break in series between 2005 and 2006 for the United Kingdom as calendar-quarter based historical series are available since 1992.
- *Introduction of new EU-harmonised questionnaire:* Sweden (2004/05) and Turkey (2003/04).
- *Change in lower age limit from 16 to 15 years:* Norway (2005/06). Moreover, since 2006, age is defined as years reached at the survey reference week, instead of completed years at the end of the year, as earlier.
- *Inclusion of population controls based on Census results in the estimation process:* Israel (2007/08), Mexico (2009/10), Spain (1995/96), Turkey (2006/07), United Kingdom (revised series from 1992 onwards), United States (1999/2000).

Further explanations on breaks in series and their impact on employment and unemployment levels and on ratios can be found at: [www.oecd.org/employment/outlook](http://www.oecd.org/employment/outlook).

The Russian Federation is currently undergoing an accession process.

Note: The OECD harmonised unemployment rates are compiled for 34 OECD member countries and conform to the guidelines of the 13th Conference of Labour Statisticians of the International Labour Office (referred to as the ILO guidelines). In so far as possible, the data have been adjusted to ensure comparability over time. All series are benchmarked to labour-force-survey-based estimates. The unemployment rates for the European Union (EU) member countries, Norway and Turkey are produced by the Statistical Office of the European Communities (Eurostat). For the remaining OECD countries, the OECD is responsible for collecting data and calculating unemployment rates. Please refer to the following URL for methodological notes: [www.oecd.org/dataoecd/21/0/44743407.pdf](http://www.oecd.org/dataoecd/21/0/44743407.pdf).

a) Ratios refer to persons aged 15-64 years who are in employment or in the labour force divided by the working-age population, or in unemployment divided by the labour force.

b) Refers to persons aged 16-64. For Norway up to 2005.

c) Information on data for Israel: <http://dx.doi.org/10.1787/688922315602>. Ratios are under-estimated except unemployment rates. See details in the PDF reported below.

a) Temporary employees are wage and salary workers whose job has a pre-determined termination date as opposed to permanent employees whose job is of unlimited duration. National definitions broadly conform to this generic definition, but may vary depending on national circumstances. Country-specific details can be found in the PDF reported below.

b) Data refer to 1997 instead of 1995.

c) Data refer to 1996 instead of 1995.

a) The concept used is the total number of hours worked over the year divided by the average number of people in employment. The data are intended for comparisons of trends over time; they are unsuitable for comparisons of the level of average annual hours of work for a given year, because of differences in their sources. Part-time and part-year workers are covered as well as full-time workers.

b) OECD estimates for all years for the Czech Republic and 2011 for France.

c) Information on data for Israel: <http://dx.doi.org/10.1787/888932315602>.

d) OECD estimates on hours per worker are obtained by dividing total hours worked from the Federal Statistical Office (FSO) by SPAO based average employment from the FSO website, referring both to National Accounts domestic concept.

e) Data refer to establishments in manufacturing with five or more employees.

f) Data refer to establishments with five or more regular employees.

Source: The series on annual hours actually worked per person in total employment presented in this table for all 34 OECD countries are consistent with the series retained for the calculation of productivity measures in the *OECD Productivity Database* ([www.oecd.org/statistics/productivity/compendium](http://www.oecd.org/statistics/productivity/compendium)). However, there may be some differences for some countries given that the main purpose of the latter database is to report data series on labour input (i.e. total hours worked) and also because the updating of databases occurs at different moments of the year.

Hours actually worked per person in employment are according to National Accounts concepts for 18 countries: Austria, Canada, the Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Italy, Korea, the Netherlands, Norway, the Slovak Republic, Spain, Sweden, Switzerland and Turkey. OECD estimates for Belgium, Ireland, Luxembourg and Portugal for annual hours worked are based on the European Labour Force Survey, as are estimates for dependent employment only for Austria, Estonia, Greece, the Slovak Republic and Slovenia. The table includes labour-force-survey-based estimates for the Russian Federation.

Country specific notes can be found at: [www.oecd.org/employment/outlook](http://www.oecd.org/employment/outlook) and data at the *OECD Online Employment Database*: [www.oecd.org/employment/database](http://www.oecd.org/employment/database).

a) Persons for whom no duration of unemployment was specified are excluded from the total.

b) Data are annual averages of monthly or quarterly figures covering all weeks of the months or quarters for recent years in countries conducting continuous labour force surveys. Annual averages vary by countries and years. (See country details at: [www.oecd.org/dataoecd/13/57/43103377.pdf](http://www.oecd.org/dataoecd/13/57/43103377.pdf) containing further notes and sources related to data on unemployment by duration of job search.)

c) Data refer to persons aged 16-64. For Norway, up to 2005.

d) Data in brackets are based on small sample sizes.

e) Data for 2000 refer to 1999.

f) Information on data for Israel: <http://dx.doi.org/10.1787/888932315602>.

g) Weighted average.

							17.0	16.3		

Note: Estimates of earnings used in the calculations refer to gross earnings of full-time wage and salary workers. However, this definition may slightly vary from one country to another. Further information on the national data sources and earnings concepts used in the calculations can be found at: [www.oecd.org/employment/outlook](http://www.oecd.org/employment/outlook).

- a) Earnings dispersion is measured by the ratio of 9<sup>th</sup> to 1<sup>st</sup> deciles limits of earnings, 9<sup>th</sup> to 5<sup>th</sup> deciles and 5<sup>th</sup> to 1<sup>st</sup> deciles. Data refer to 2001 (instead of 2000) for Israel. They refer to 2005 (instead of 2010) for the Netherlands, to 2008 for Belgium and Iceland, and to 2009 for the Czech Republic and France.
- b) The gender wage gap is unadjusted and is calculated as the difference between median earnings of men and women relative to median earnings of men. Data refer to 2001 (instead of 2000) for Israel. They refer to 2005 (instead of 2010) for the Netherlands, to 2008 for Belgium and Iceland, and to 2009 for the Czech Republic and France.
- c) The incidence of low pay refers to the share of workers earning less than two-thirds of median earnings. Data refer to 1999 (instead of 2000) for the Netherlands and to 2001 for Israel. They refer to 2008 (instead of 2010) for Belgium and Iceland, and to 2009 for the Czech Republic and France.
- d) Information on data for Israel: <http://dx.doi.org/10.1787/888932315602>.
- e) Data for 2000 refer to estimations obtained splicing new-to-old series. For Korea, there is a break in series in 2000, and data were spliced from new-to-old series on 2000 data. For the United Kingdom, there are breaks in series in 1997, 2004 and 2006; in each case, data were spliced from new-to-old series on 2006 data, then 2004 and finally 1997.
- f) Unweighted average for above countries.

a) Average annual wages per full-time equivalent dependent employee are obtained by dividing the national-accounts-based total wage bill by the average number of employees in the total economy, which is then multiplied by the ratio of average usual weekly hours per full-time employee to average usually weekly hours for all employees. For more details, see: [www.oecd.org/employment/outlook](http://www.oecd.org/employment/outlook).

b) Average wages are converted in USD using current exchange rates in USD.

c) Average wages are converted in USD PPPs using 2011 USD PPPs for private consumption.

d) Average annual wages are deflated by a price deflator for private final consumption expenditures in 2011 prices.

e) Provisional estimates.

f) Information on data for Israel: <http://dx.doi.org/10.1787/888932315602>.

g) Aggregates are weighted averages computed on the basis of 2011 GDP weights expressed in 2011 purchasing power parities and include the countries shown.

a) See the introductory note about scope and comparability at [www.oecd.org/employment/outlook/Sub-categories 1.1 and 1.2 refer only to separately-identified spending. Active and passive participant stocks should not be added \(some people appear in both\).](http://www.oecd.org/employment/outlook/Sub-categories 1.1 and 1.2 refer only to separately-identified spending. Active and passive participant stocks should not be added (some people appear in both).)

b) Fiscal years starting on 1 July.

c) Category 1 includes the Australian Apprenticeship Access Program (formerly reported in Category 2) and expenditure through the Employment Pathway Fund (EPF). Slightly over half of EPF expenditure relates to training and wage subsidies, which should in principle be reported in Categories 2 to 7.

d) Reported expenditure in Categories 2 to 7 includes income support payments for participants in the Community Development Employment Program but not those in other programmes.

e) Category 2 data do not include about 80 000 participants in training (often in state-run vocational training) who are supported by unemployment benefits, or the tuition costs for these participants.

f) Category 5 data include Disability Employment Services (DES). Within DES some of the expenditure, and a majority of the participants, relates to employment services (Category 1) rather than participation in "full-time or significant part-time activity" (which is a key criterion for the inclusion of a programme in Categories 2 to 7), but a statistical breakdown between Categories 1 and 5 is not available for this programme.

g) Category 8 data do not include Parenting Payments subject to participation requirements (i.e., conditional on availability for work and job search). Participants stocks for Categories 4 ("Employment incentives" and 7 ("Start-up incentives") are not included).

h) Staff costs of the unemployment insurance service.

i) Adjustments for double-counting (relevant in cases of simultaneous participation in two or more programmes, e.g. the budget for training centres and training subsistence allowances) are applied to database totals for the main categories (e.g. 2, "Training"), but not to sub-category data.

j) Includes administration costs of union and auxiliary benefit payment organisations.

k) Includes the "fries services" programme, which is only partly targeted on the unemployed.

a) See the introductory note about scope and comparability at [www.oecd.org/employment/outlook](http://www.oecd.org/employment/outlook). Sub-categories 1.1 and 1.2 refer only to separately-identified spending. Active and passive participant stocks should not be added (some people appear in both).

b) Fiscal years starting on 1 April. Some participant stock data lines are revised from those published previously, and some lines remain under review.

c) Labour Market Agreements expenditure is allocated 20% to Category 1, 60% to Category 2, and 20% outside the scope of the database (training for people in employment). A small proportion of the expenditure is devoted to work experience but this is not separately accounted for.

d) Employment Assistance Service.

e) Includes the Aboriginal Human Resources Development Agreements, which have not been allocated across the main categories.

f) Data under review (see note b above). Participant stocks for Categories 5.2 "Rehabilitation" and 6 "Direct job creation" are not included.

g) Secretariat estimate based on the staff of local employment offices (OMIL) (654 staff, about 0.01% of total employment, in 2007), and assuming a further 0.01% of GDP is spent on other counselling and benefit administration functions.

h) Participant stocks for Category 2.2 "Workplace training" are not included.

a) See the introductory note about scope and comparability at [www.oecd.org/employment/outlook](http://www.oecd.org/employment/outlook). Sub-categories 1.1 and 1.2 refer only to separately-identified spending. Active and passive participant stocks should not be added (some people appear in both).

b) Three-quarters of the administration costs of independent unemployment insurance funds (the last quarter concerns administration of benefits outside the scope of this database), which provide some placement-related services.

c) Includes income support paid to participants in "Specially arranged activation" (in 2010, "Guidance and upgrading"), but not the corresponding services.

d) The totals shown for Category 4 include non-zero spending on Eurostat Category 3 "Job rotation and sharing" in Denmark, Finland, Germany, Italy, Korea and Spain.

e) Includes social assistance benefits paid to unemployed but not inactive recipients.

f) Includes part-time and partial benefits.

g) Early retirement benefits (*efférer*) only when paid to recipients who entered the scheme from unemployment.

h) Includes the administration costs of independent unemployment insurance funds.

<sup>a</sup> See the introductory note about scope and comparability at [www.oecd.org/employment/outlook](http://www.oecd.org/employment/outlook). Sub-categories 1.1 and 1.2 refer only to separately-identified spending. Active and passive participant stocks should not be added (some people appear in both).<sup>b</sup> Secretariat estimate based on data for total administration costs and human resources administering income support payments within the National Social Security Institute (reported in INPS General Accounts and Annual Report).<sup>c</sup> Mainly exemptions from employer social security contributions, not restricted to the unemployed or those at risk. "Training post compulsory education and post diploma" is included in the total for Category 2 but not in this sub-category.<sup>d</sup> The totals shown for Category 4 include non-zero spending on Eurostat Category 3 "Job rotation and sharing" in Denmark, Finland, Germany, Italy, Korea and Spain.<sup>e</sup> Much spending in this category refers to tax relief for firms that have increased total employment and for the conversion of temporary contracts into permanent ones, not otherwise conditional on employment status.<sup>f</sup> Fiscal years starting on 1 April. Revised data relate to expenditures on an actual outlay basis as reported in financial statements (data previously published related to budget allocations).<sup>g</sup> Revised data; some items that were previously reported in Category 1 are now reported in Category 2.<sup>h</sup> Includes education and training allowances, but not unemployment benefits paid to programme participants.<sup>i</sup> Employment Adjustment Subsidies and the Employment Continuation Benefit of the Employment Insurance (EI) system are reported in Category 4. The Re-employment Allowance of the EI system is reported in Category 8.<sup>j</sup> Revised data.<sup>k</sup> Does not include the labour costs of public officials working in job centres.<sup>l</sup> Includes the re-employment bonus and measures of professional (re)integration of disabled workers which have not been allocated across sub-categories.<sup>m</sup> Includes Secretariat estimates in Category 6 for "Special measures".

a) See the introductory note about scope and comparability, programme, which resembles partial unemployment benefits paid subject to an earnings taper.

b) Mainly the 'intermediate earnings' programme, which resembles partial unemployment benefits paid to participants in active programmes.

c) Excludes unemployment benefits paid to participants in active programmes.

d) Coverage of expenditure and participants in Northern Ireland is incomplete. Fiscal years starting on 1 April.

e) Includes the administration of benefits (JSA) and other benefits for persons of working age (incapacity benefit, income support and certain supplementary benefits), although only JSA is included in Category 8.

f) Fiscal year starting on 1 October.

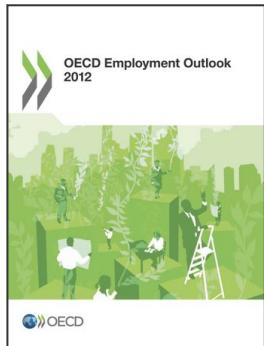

g) Mainly costs of running unemployment insurance offices. Also includes various national activities such as information, research and evaluation.

h) Includes TANF work-related activities (estimated as 0.02% of GDP). Other TANF expenditure (0.20% of GDP) on child care, transport, family and social work, etc., administration and cash benefits is not included.

i) Expenditure averages for Categories 2 to 9 refer only to countries for which both Category 1 and its sub-categories, and all participant data, are averages for all countries with non-missing data for the particular sub-category. Category or total averages are not always additive across categories, or comparable through time, owing to variable country coverage. For some years and countries, expenditure by sub-categories is estimated by applying the shares in the corresponding category calculated for countries with non-missing data.

j) Source: For European Union countries and Norway Eurostat (2012), *Labour Market Policy: 2012 edition* and detailed underlying data supplied to OECD by Eurostat with certain Secretarial adjustments. For other countries: *OECD Database on Labour Market Programmes*.
