

STATISTISCHER ANHANG

Dieser Anhang enthält Angaben zu den wichtigsten ökonomischen Datenreihen, die als Hintergrundmaterial für die im Hauptteil des Berichts beschriebenen jüngsten wirtschaftlichen Entwicklungen im OECD-Raum dienen. Bei den Daten für den Zeitraum 2012-2014 handelt es sich um Schätzungen und Projektionen der OECD. In einigen Tabellen wurden die Daten angepasst, um international vereinbarten Konzepten und Definitionen zu entsprechen sowie eine bessere Vergleichbarkeit zwischen den Ländern und zugleich die Konsistenz mit früheren Daten in anderen OECD-Publikationen zu gewährleisten. Die regionalen Aggregate basieren auf Gewichtungskoeffizienten, die für jeden Beobachtungszeitraum neu definiert werden, wobei die Koeffizienten von den jeweiligen Datenreihen abhängen. Wegen Einzelheiten bezüglich der Aggregation, vgl. *OECD Economic Outlook Sources and Methods*.

Die Methoden und die statistischen Konzepte und Quellen, die den OECD-Projektionen zu Grunde liegen, werden in *OECD Economic Outlook, Sources and Methods* (www.oecd.org/eco/sources-and-methods) detailliert beschrieben.

Berichtigungen für die aktuelle sowie gegebenenfalls frühere Ausgaben finden sich unter www.oecd.org/publishing/corrigenda.

Die statistischen Daten für Israel wurden von den zuständigen israelischen Stellen bereitgestellt, die für sie verantwortlich zeichnen. Die Verwendung dieser Daten durch die OECD erfolgt unbeschadet des völkerrechtlichen Status der Golanhöhen, von Ost-Jerusalem und der israelischen Siedlungen im Westjordanland.

ANMERKUNG ZU DEN PROJEKTIONSINTERVALLEN

Die vierteljährlichen Projektionen der OECD für ausgewählte Schlüsselvariable werden auf saison- und arbeitstagbereinigter Basis erstellt. Das bedeutet, dass zwischen den bereinigten und unbereinigten Jahresdaten u.U. Differenzen entstehen können, wenn diese auch im Allgemeinen verhältnismäßig klein sind. In einigen Ländern enthalten die amtlich projizierten Jahresdaten keine arbeitstäglichen Bereinigungen. Selbst wenn die amtlichen Prognosen auf der Basis der Arbeitstage erstellt wurden, kann der Umfang der entsprechenden Anpassung in einigen Fällen von dem der OECD-Praktiken abweichen. Redaktionsschluss für die Daten der in den Tabellen zusammengefassten Projektionen war der 15. November 2012.

Zusätzliche Informationen

Schweiz		0.9	0.5	Nicht-OECD-Länder		100.0	40.9
Slowakische Republik	1.1	0.3	0.2	Weltweit			100.0

Anmerkung: Die Gewichtungskoeffizienten werden anhand des nominalen BIP zu KKP-Kursen von 2010 berechnet. Die regionalen Aggregate werden anhand der zu KKP-Kursen evaluierten gleitenden nominalen BIP-Gewichtungen berechnet. Daher weichen die Ländergewichtungen von Jahr zu Jahr ab. Außerdem können die Gewichtungskoeffizienten für verschiedene BIP-Komponenten unterschiedlich ausfallen, da die Gewichtungen auf den Länderanteilen am Gesamtwert der spezifischen Komponente basieren.

1. Länder, die sowohl Mitglied des Euroraums als auch der OECD sind.

Note: The adoption of national accounts systems SNA93 or ESA95 has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. For further information, see table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex. These numbers are working-day adjusted and hence may differ from the basis used for official projections.

Note: The adoption of national accounts systems SNA93 or ESA95 has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. For further information, see table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex, Working-day adjusted -- see note to Annex Table 1.

Note: The adoption of national accounts systems SNA93 or ESA95 has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. For further information, see table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex. Working-day adjusted -- see note to Annex Table 1.

Note: The adoption of national accounts systems SNA93 or ESA95 has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. For further information, see table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex. Working-day adjusted – see note to Annex Table 1.

Note: The adoption of national accounts systems SNA93 or ESA95 has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. For further information, see table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex. Working-day adjusted -- see note to Annex Table 1.

1. Contributions to per cent change from the previous period, seasonally adjusted at annual rates.

Note: In so far as possible, the data have been adjusted to ensure comparability over time and to conform to the guidelines of the International Labour Office. Annual figures are calculated by averaging the monthly and/or quarterly estimates (for both unemployed and the labour force). Further information is available from OECD stat (<http://stats.oecd.org/index.aspx>), see the metadata relating to the harmonised unemployment rate.

Note: The adoption of national accounts systems SNA93 or ESA95 has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. For further information, see table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex.

Note: The adoption of national accounts systems SNA93 or ESA95 has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. For further information, see table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex.

Note: For the euro area countries, the euro area aggregate and the United Kingdom: harmonised index of consumer prices (HICP).

1. Excluding rent, but including imputed rent.

2. The consumer price index includes mortgage interest costs.

3. Known as the CPI in the United Kingdom.

1. Based on data published in various issues of International Energy Agency, *Oil Market Report*.

2. Indices through 2011 are based on data compiled by the International Energy Agency for oil and by the Hamburg Institute of International Economics (HWWI) for the prices of other primary commodities; OECD estimates and projections for 2012 to 2014.

3. North Sea Dated, London close, midpoint.

4. OECD calculations. The total price index for non-energy primary commodities is a weighted average of the individual HWWI non-oil commodities price indices with the weights based on the commodities' share in total non-energy commodities world trade.

Note: The adoption of new national account systems SNA93 or ESA95 has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. See table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex. Most countries report household saving on a net basis (i.e. excluding consumption of fixed capital by households and unincorporated businesses). In most countries household refers to the "household" sector plus non-profit institutions servicing households (in some cases referred to as personal saving).

Note: Financial balances include one-off factors, such as those resulting from the sale of the mobile telephone licenses. As data are on a national accounts basis (SNA93/ESA95), the government financial balances may differ from the numbers reported by the European Commission under the Excessive Deficit Procedure for some EU countries. For more details, see *OECD Economic Outlook Sources and Methods* (<http://www.oecd.org/eo/sources-and-methods>).

Note: Gross debt data are not always comparable across countries due to different definitions or treatment of debt components. Maastricht debt for European Union countries is shown in Annex Table 61.

For more details, see OECD Economic Outlook Sources and Methods (<http://www.oecd.org/econ/sources-and-methods>).

For euro area countries that have asked for assistance from the European Union and the IMF (Greece, Ireland and Portugal), the change in 2010 and 2011 in government financial liabilities has been approximated by the change in government liabilities recorded for the Maastricht definition of general government debt.

1. Includes the debt of the Belgium National Railways Company (SNCF) from 2005 onwards.

2. Includes the debt of the Inherited Debt Fund from 1995 onwards.

3. Includes the debt of the Japan Railway Settlement Corporation and the National Forest Special Account from 1998 onwards.

4. Data are on a non-consolidated basis (SNA93).

Note: Net debt measures are not always comparable across countries due to different definitions or treatment of debt (and asset) components, see also OECD Economic Outlook Sources and Methods (<http://www.oecd.org/eo/sources-and-methods>).

1. Includes the debt of the Belgium National Railways Company (SNCB) from 2005 onwards.

2. From 1995 onwards housing corporation shares are no longer classified as financial assets.

3. Includes the debt of the Inherited Debt Fund from 1995 onwards.

4. Includes the debt of the Japan Railway Settlement Corporation and the National Forest Special Account from 1998 onwards.

5. Data are on a non-consolidated basis (SNA93).

Note: Three-month money market rates where available, or rates on similar financial instruments. For further information, see *OECD Economic Outlook Sources and Methods* (<http://www.oecd.org/eco/sources-and-methods>). Individual euro area countries are not shown after 1998 (1999 for Greece, 2006 for Slovenia, 2007 for the Slovak Republic and 2010 for Estonia) since their short-term interest rates are equal to the euro area rate.

Note: 10-year benchmark government bond yields where available or yield on similar financial instruments (for Korea a 5-year bond is used). The long-term interest rates refer to yields in secondary bond markets and are not representative of average government funding costs. For further information, see OECD Economic Outlook Sources and Methods (<http://www.oecd.org/eco/sources-and-methods>).

Note: Competitiveness-weighted relative consumer prices in dollar terms. Competitiveness weights take into account the structure of competition in both export and import markets of the manufacturing sector of 49 countries. An increase in the index indicates a real effective appreciation and a corresponding deterioration of the competitive position. For details on the method of calculation, see *OECD Economic Outlook Sources and Methods* (<http://www.oecd.org/eco/sources-and-methods>).

Note: Competitiveness-weighted relative unit labour costs for the overall economy in dollar terms. Competitiveness weights take into account the structure of competition in both export and import markets of the goods sector of 49 countries. An increase in the index indicates a real effective appreciation and a corresponding deterioration of the competitive position. For details on the method of calculation, see *OECD Economic Outlook Sources and Methods* (<http://www.oecd.org/eco/sources-and-methods>).

Note: Regional aggregates are calculated inclusive of intra-regional trade. Export performance is measured as actual growth in exports relative to the growth of the country's export market. For more details, see OECD Economic Outlook Sources and Methods (<http://www.oecd.org/eco/sources-and-methods>).

1. Chinese Taipei; Hong Kong; China; Malaysia; Philippines; Singapore; Vietnam; Thailand; India and Indonesia.

Note: Historical data for the OECD area are aggregates of reported balance-of-payments data of each individual country. Because of various statistical problems as well as a large number of non-reporters among non-OECD countries, trade and current account balances estimated on the basis of these countries' own balance-of-payments records may differ from corresponding estimates shown in this table. National-accounts basis for OECD countries and balance-of-payments basis for the non-OECD regions.

2. Dynamic Asian Economies (Chinese Taipei; Hong Kong, China; Malaysia; Philippines; Singapore; Vietnam and Thailand), India and Indonesia.

3. Reflects statistical errors and asymmetries. Given the very large gross flows of world balance-of-payments transactions, statistical errors and asymmetries easily give rise to world totals (balances) that are significantly different from zero.

Note: The adoption of national accounts systems SNA93 or ESA95 has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. For further information, see table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex.

Note: The adoption of national accounts systems SNA93 or ESA95 has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. For further information, see table "National Accounts Reporting Systems, base years and latest data updates" at the beginning of the Statistical Annex.

1. For the United Kingdom, the euro area countries and the euro area aggregate, the Harmonised Index of Consumer Prices (HICP) is used.

Note: For the period before 2010, gross debt figures are provided by Eurostat, the Statistical Office of the European Communities, unless more recent data are available, while GDP figures are provided by national authorities. This explains why these ratios can differ significantly from the ones published by Eurostat. For the projection period, debt ratios are in line with the OECD projections for general government gross financial liabilities and GDP.
