

STATISTISCHER ANHANG

Dieser Anhang enthält Angaben zu einigen der wichtigsten ökonomischen Datenreihen, die als Hintergrundmaterial für die im Hauptteil des Berichts beschriebenen jüngsten wirtschaftlichen Entwicklungen im OECD-Raum gedacht sind. Bei den Daten für den Zeitraum 2005-2007 handelt es sich um Schätzungen und Projektionen der OECD. In einigen Tabellen wurden die Daten an international vereinbarte Konzepte und Definitionen angepasst, um eine bessere Vergleichbarkeit zwischen den einzelnen Ländern und zugleich die Konsistenz mit früheren Daten in anderen OECD-Publikationen zu gewährleisten. Die regionalen Summen und Teilsummen beziehen sich auf die in der Tabelle genannten Länder, für die Daten angeführt werden. Die im Anhang enthaltenen aggregierten Messgrößen wurden, mit Ausnahme der Reihen für den Euroraum (siehe weiter unten), auf der Basis der BIP-Gewichtungskoeffizienten von 2000 zu Kaufkraftparitäten von 2000 berechnet (wegen der Gewichtungen vgl. folgende Seite). Die aggregierten Messgrößen für die Außenhandels- und Zahlungsbilanzstatistiken hingegen beruhen für die nominalen Angaben auf den laufenden Wechselkursen und für die realen Angaben auf den Wechselkursen des Basisjahres.

Die Methoden und die statistischen Konzepte und Quellen, die den OECD-Projektionen zu Grunde liegen, werden detailliert beschrieben in verschiedenen Dokumenten, die von der OECD-Internetseite abgerufen werden können:

- *OECD Economic Outlook, Sources and Methods* (www.oecd.org/eco/sources-and-methods)
- *OECD Economic Outlook, Database Inventory* (www.oecd.org/pdf/M00024000/M00024521.pdf)
- The construction of macroeconomic series of the euro area (www.oecd.org/pdf/M00017000/M00017861.pdf)

ANMERKUNG ZU DEN NEUEN PROJEKTIONINTERVALLEN

Die OECD erstellt nunmehr ihre vierteljährlichen Projektionen für ausgewählte Schlüsselvariable auf saison- und arbeitstagbereinigter Basis. Das bedeutet, dass zwischen den bereinigten und unbereinigten Jahresdaten u.U. Differenzen entstehen können, wenn diese auch im Allgemeinen verhältnismäßig klein sind. In einigen Ländern enthalten die amtlich projizierten Jahresdaten keine arbeitstäglichen Bereinigungen. Selbst wenn die amtlichen Prognosen auf der Basis der Arbeitstage erstellt wurden, kann der Umfang der entsprechenden Anpassung in einigen Fällen von den der OECD-Praktiken abweichen. Redaktionsschluss für die Daten der in den Tabellen zusammengefassten Projektionen war der 17. Mai 2006.

Ländereinstufung***OECD-Länder***

Die sieben großen OECD-Länder	Deutschland, Frankreich, Italien, Japan, Kanada, Vereinigtes Königreich und Vereinigte Staaten.
Euroraum	Belgien, Deutschland, Finnland, Frankreich, Griechenland, Irland, Italien, Luxemburg, Niederlande, Österreich, Portugal und Spanien.

Nicht-OECD-Länder

Afrika und Naher Osten	Afrika und die folgenden Länder (Naher Osten): Bahrain, Irak, Iran, Jemen, Jordanien, Katar, Kuwait, Libanon, Oman, Saudi-Arabien, Arabische Republik Syrien, Vereinigte Arabische Emirate und Zypern.
Dynamische Volkswirtschaften Asiens	Chinesisch Taipeh, Hongkong (China), Indonesien, Malaysia, Philippinen, Singapur und Thailand.
Sonstige asiatische Länder	Asiatische Nicht-OECD-Länder und Ozeanien, ausgenommen China, Dynamische Volkswirtschaften Asiens und Naher Osten.
Lateinamerika	Mittel- und Südamerika.
Mittel- und Osteuropa	Albanien, Baltische Staaten, Bulgarien, Rumänien und Neue Unabhängige Staaten der ehemaligen Sowjetunion.

Gewichtungsschema für aggregierte Messgrößen*In Prozent*

Australien	1.87	Österreich	0.84
Belgien	1.00	Polen	1.50
Dänemark	0.56	Portugal	0.69
Deutschland	7.70	Schweden	0.88

Note: SNA: System of National Accounts. ESA: European Standardised Accounts. NIPA: National Income and Product Accounts. GFS: Government Financial Statistics.

The numbers in brackets indicate the starting year for the time series and the latest available historical data included in this Outlook database.

1. Data prior to 1991 refer to the new SNA93/ESA95 accounts for western Germany data.

ANHANGSTABELLEN

(englische Fassung)

Demand and Output

1.	Real GDP	203
2.	Nominal GDP	204
3.	Real private consumption expenditure	205
4.	Real public consumption expenditure	206
5.	Real total gross fixed capital formation	207
6.	Real gross private non-residential fixed capital formation	208
7.	Real gross private residential fixed capital formation	209
8.	Real total domestic demand	210
9.	Foreign balance contributions to changes in real GDP	211
10.	Output gaps	212

Wages, Costs, Unemployment and Inflation

11.	Compensation per employee in the business sector	213
12.	Labour productivity for the total economy	214
13.	Unemployment rates: commonly used definitions	215
14.	Standardised unemployment rates	216
15.	Labour force, employment and unemployment	217
16.	GDP deflators	218
17.	Private consumption deflators	219
18.	Consumer price indices	220
19.	Oil and other primary commodity markets	221

Key supply-side data

20.	Employment rates, participation rates and labour force	222
21.	Potential GDP, employment and capital stock	223
22.	Structural unemployment, wage shares and unit labour cost	224

Saving

23.	Household saving rates	225
24.	Gross national saving	226

Fiscal Balances and Public Indebtedness

25.	General government total outlays	227
26.	General government total tax and non-tax receipts	228
27.	General government financial balances	229
28.	Cyclically-adjusted general government balances	230
29.	General government primary balances	231
30.	Cyclically-adjusted general government primary balances	232
31.	General government net debt interest payments	233
32.	General government gross financial liabilities	234
33.	General government net financial liabilities	235

Interest Rates and Exchange Rates

34. Short-term interest rates	237
35. Long-term interest rates	237
36. Nominal exchange rates (<i>vis-à-vis</i> the US dollar)	238
37. Effective exchange rates	239

External Trade and Payments

38. Export volumes of goods and services	240
39. Import volumes of goods and services	241
40. Export prices of goods and services	242
41. Import prices of goods and services	243
42. Competitive positions: relative consumer prices	244
43. Competitive positions: relative unit labour costs	245
44. Export performance for total goods and services	246
45. Shares in world exports and imports	247
46. Geographical structure of world trade growth.....	248
47. Trade balances for goods and services	249
48. Investment income, net	250
49. Total transfers, net	251
50. Current account balances	252
51. Current account balances as a percentage of GDP	253
52. Structure of current account balances of major world regions	254
53. Export market growth in goods and services	255
54. Import penetration	256

Other Background Data

55. Quarterly demand and output projections	257
56. Quarterly price, cost and unemployment projections	259
57. Contributions to changes in real GDP in OECD countries	260
58. Household wealth and indebtedness	262
59. Central government financial balances	263
60. Maastricht definition of general government gross public debt	263
61. Monetary and credit aggregates: recent trends	264

Note: The adoption of new national account systems, SNA93 or ESA95, has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. Moreover, some countries are using chain-weighted price indices to calculate real GDP and expenditures components. See Table "National Account Reporting Systems and Base-years" at the beginning of the Statistical Annex and *OECD Economic Outlook*. Sources and Methods (<http://www.oecd.org/eco/sources-and-methods>).

These numbers are working-day adjusted and hence may differ from official projections. The differences are particularly marked for certain countries -- see the notes to the "Demand and Output" table in the country notes for Germany and Italy.

Note: The adoption of new national account systems, SNA93 or ESA95, has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence there are breaks in many national series. See Table "National Account Reporting Systems and Base-years" at the beginning of the Statistical Annex and *OECD Economic Outlook* Sources and Methods (<http://www.oecd.org/eco/sources-and-methods>). Working-day adjusted -- see note to Table on Real GDP.

Note: The adoption of new national account systems, SNA93 or ESA95, has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. Moreover, some countries are using chain-weighted price indices to calculate real GDP and expenditures components. See Table "National Account Reporting Systems and Base-years" at the beginning of the Statistical Annex and *OECD Economic Outlook* Sources and Methods (<http://www.oecd.org/econ/sources-and-methods>). Working-day adjusted -- see note to Table on Real GDP.

Note: The adoption of new national account systems, SNA93 or ESA95, has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. Moreover, some countries are using chain-weighted price indices to calculate real GDP and expenditures components. Some countries, United States, Canada and France use hedonic price indices to deflate current-price values of investment in certain information and communication technology products such as computers. See Table "National Account Reporting Systems and Base-years" at the beginning of the Statistical Annex. National account data do not always have a sectoral breakdown of investment expenditures, and for some countries data are estimated by the OECD. See also *OECD Economic Outlook Sources and Methods*, (<http://www.oecd.org/econ/sources-and-methods>). Working-day adjusted -- see note to Table on Real GDP.

Note: The adoption of new national account systems, SNA93 or ESA95, has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. Moreover, some countries are using chain-weighted price indices to calculate real GDP and expenditure components. See Table "National Account Reporting Systems and Baseline years" at the beginning of the Statistical Annex and *OECD Economic Outlook* Sources and Methods (<http://www.oecd.org/econ/sources-and-methods>). Working-day adjusted -- see note to Table on Real GDP.

Note: Potential output for all countries except Portugal is calculated using the "production function method" described in Giorno et al., "Potential Output, Output Gaps, and Structural Budget Balances", *OECD Economic Studies*, No. 24, 1995.1. Using this methodology, two broad changes have been made to the calculation of potential output since the last *OECD Economic Outlook*. First, the "smoothing parameters" applied in the calculations have been standardised across the OECD countries. Second, as was previously the case for the major seven economies only, the calculations now incorporate trend working hours for other Member economies also, excepting Austria and Portugal where the data span is insufficient. Potential output for Portugal is calculated using a Hodrick-Prescott filter of actual output. See also *OECD Economic Outlook* Sources and Methods (<http://www.oecd.org/eco/sources-and-methods>). Working-day adjusted -- see note to Table on Real GDP.

Note: Labour market data are subject to differences in definitions across countries and to many series breaks, though the latter are often of a minor nature. For information about definitions, sources, data coverage, break in series and rebasings, see *OECD Economic Outlook* Sources and Methods (<http://www.oecd.org/econ/sources-and-methods>).

1. Based on National Employment Survey. Data not comparable with previous issues of the OECD Economic Outlook; see OECD Economic Outlook Sources and Methods.

2. Spanish data on unemployment are revised since 1976 using the methodology to be applied by the LFS as from 2002. Revisions are OECD Economic Outlook Sources and Methods.

3. The figures incorporate important revisions to Turkish data; see OECD Economic Outlook Sources and Methods.

Note: In so far as possible, the data have been adjusted to ensure comparability over time and to conform to the guidelines of the International Labour Office. All series are benchmarked to labour-force-survey-based estimates. In countries with annual surveys, monthly estimates are obtained by interpolation/extrapolation and by incorporating trends in administrative data, where available. The annual figures are then calculated by averaging the monthly estimates (for both unemployed and the labour force). For countries with monthly or quarterly surveys, the annual estimates are obtained by averaging the monthly or quarterly estimates, respectively. For several countries, the adjustment procedure used is similar to that of the Bureau of Labor Statistics, U.S. Department of Labor. For EU countries, the procedures are similar to those used in deriving the Comparable Unemployment Rates (CURs) of the Statistical Office of the European Communities. Minor differences may appear mainly because of various methods of calculating and applying adjustment factors, and because EU estimates are based on the civilian labour force. See technical notes in OECD Quarterly Labour Force Statistics.

1. Prior to 1993 data refers to Western Germany.

1. The aggregate measures include Mexico as of 1987. There is a potential bias in the aggregates thereafter because of the limited coverage of the Mexican National Survey of Urban Employment.

Note: The adoption of new national account systems, SNA93 or ESA95, has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence there are breaks in many national series. See Table 'National Account Reporting Systems and Base-years' at the beginning of the Statistical Annex and *OECD Economic Outlook Sources and Methods* (<http://www.oecd.org/eco/sources-and-methods>).

Note: Consumer price index. For the euro area countries, the euro area aggregate and the United Kingdom: harmonised index of consumer prices (HICP).

1. Excluding rent, but including imputed rent.

2. Until 1981: Istanbul index (154 items); from 1982, Turkish index.

3. Known as the CPI in the United Kingdom.

4. The methodology for calculating the Consumer Price Index has changed considerably over the past years, lowering measured inflation substantially.

Note: Employment rates are calculated as the ratio of total employment to the population of working age. The working age population concept used here and in the labour force participation rate is defined as all persons of the age 15 to 64 years (16 to 65 years for Spain). This definition does not correspond to the commonly-used working age population concepts for the United States (16 years and above), Hungary and New Zealand (15 years and above). Hence for these countries no projections are available. For information about sources and definitions, see *OECD Economic Outlook* Sources and Methods (<http://www.oecd.org/eco/sources-and-methods>).

United Kingdom	4.9	6.7	8.0	10.2	11.5	10.8	9.3	10.0	9.4	9.2	6.2	4.9

Note: The adoption of new national account systems, SNA93 or ESA95, has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. See Table "National Account Reporting Systems and Base-years" at the beginning of the Statistical Annex and *OECD Economic Outlook*. Sources and Methods (<http://www.oecd.org/econ/sources-and-methods>). Countries differ in the way household disposable income is reported (in particular whether private pension benefits less pension contributions are included in disposable income or not), but the calculation of household saving is adjusted for this difference. Most countries are reporting household saving on a net basis (i.e. excluding consumption of fixed capital by households and unincorporated businesses). In most countries the households saving include saving by non-profit institutions (in some cases referred to as personal saving). Other countries (Czech Republic, Finland, France, Japan and New Zealand) report saving of households only.

Note: Data refer to the general government sector, which is a consolidation of accounts for the central, state and local governments plus social security. Total outlays are defined as current outlays plus capital outlays. One-off revenues from the sale of mobile telephone licenses are recorded as negative capital outlays for countries listed in the note to Table 27. See *OECD Economic Outlook*, Sources and Methods (<http://www.oecd.org/econ/sources-and-methods>).

1. In 1995, data reflect the large privatisation campaign which transferred some public enterprises to private ownership through vouchers distributed to the population, representing 9.8 percentage points of GDP. In 2003, the activation of State guarantees, mainly for the banking sector, accounts for 6.4 per cent of total outlays.

2. The 1995 outlays are net of the debt taken on from the Inherited Debt Funds.

3. The 1998 outlays would be 5.3 percent points of GDP higher if it included central government's assumption of the debt of the Japan Railway Settlement Corporation and the National Forest Special Account. The 2000 outlays include capital transfers to the Deposit Insurance Company.

4. The 1995 outlays would be 4.9 percent points of GDP higher if capital transfers to a housing agency offering rentals to low income people were taken into account.

5. These data include outlays net of operating surpluses of public enterprises.

Note: Data refer to the general government sector, which is a consolidation of accounts for central, state and local governments plus social security. Non-tax receipts consist of property income (including dividends and other transfers from public enterprises), fees, charges, sales, fines, capital transfers received by the general government, etc. See *OECD Economic Outlook*. Sources and Methods (<http://www.oecd.org/eco/sources-and-methods>).

1. Includes deferred tax payments on postal savings accounts in 2000, 2001 and 2002. In 2002 corporate pension funds were authorised to transfer back to the government the basic part of their employees' pension scheme. This resulted in a capital transfer to the government which reduced the general government financial deficit by 0.1 percentage point of GDP in 2003 and 1.2 percentage point in 2004. Further transfers are assumed for 2005 and 2006 worth 1.0 and 0.2 percentage point of GDP respectively.

2. Excludes the operating surpluses of public enterprises.

Note: Financial balances include one-off revenues from the sale of the mobile telephone licenses. These revenues are substantial in a number of countries including Australia (2000-2001), Austria (2000), Belgium (2001), Denmark (2001), France (2001-2002), Germany (2000), Ireland (2002), Italy (2000), Netherlands (2000), New Zealand (2001), Portugal (2000), Spain (2000) and the United Kingdom (2000). As data are on a national account basis, the government financial balance may differ from the numbers reported to the European Commission under the Excessive Deficit Procedure for some EU countries. For more details see footnotes to Annex Tables 25 and 26 and *OECD Economic Outlook* Sources and Methods (<http://www.oecd.org/eco/sources-and-methods>).

1. Prior to 1991, when SNA93 was adopted, these data included private pension funds.

Note: Cyclically-adjusted balances exclude one-off revenues from the sale of mobile telephone licenses for those countries listed in the note to Table 27. For details on the methodology used for estimating the cyclical component of government balances see *OECD Economic Outlook*, Sources and Methods (<http://www.oecd.org/eco/sources-and-methods>).

1. Includes deferred tax payments on postal savings accounts in 2000, 2001 and 2002. The 2000 outlays include capital transfers to the Deposit Insurance Company.

2. As a percentage of mainland potential GDP. The financial balances shown exclude net revenues from petroleum activities.

Note: The cyclically-adjusted primary balance excludes the impact of net interest payments on the cyclically adjusted balance. For details on the methodology used for estimating the cyclical component of government balances, see *OECD Economic Outlook* Sources and Methods (<http://www.oecd.org/eco/sources-and-methods>).

1. Includes deferred tax payments on postal savings accounts in 2000, 2001 and 2002. The 2000 outlays include capital transfers to the Deposit Insurance Company.

2. As a percentage of mainland potential GDP. The financial balances shown exclude net revenues from petroleum activities.

Note: In the case of Ireland and New Zealand where net interest payments are not available, net property income paid is used as a proxy. For Denmark, net interest payments include dividends received. See *OECD Economic Outlook Sources and Methods* (<http://www.oecd.org/geo/sources-and-methods>).

1. Includes interest payments on the debt of the Inherited Debt Funds from 1995 onwards.

2. Includes interest payments on the debt of the Japan Railway Settlement Corporation and the National Forest Special Account from 1998 onwards.

Note: Gross debt data are not always comparable across countries due to different definitions or treatment of debt components. Notably, they include the funded portion of government employee pension liabilities for some OECD countries, including Australia and the United States. The debt position of these countries is thus overestimated relative to countries that have large unfunded liabilities for such pensions which according to ESA95/SNA93 are not counted in the debt figures, but rather as a memorandum item to the debt. General government financial liabilities for Luxembourg follow the definition of debt applied under the Maastricht Treaty (http://www.oecd.org/esa/sources-and-methods).

1. Includes the debt of the Inherited Debt Fund from 1995 onwards.

2. Includes the debt of the Japan Railway Settlement Corporation and the National Forest Special Account from 1998 onwards.

Note: Net debt measures are not always comparable across countries due to different definitions or treatment of debt (and asset) components. First, the treatment of government liabilities in respect of their employee pension plans may be different (see note to Annex Table 32). Second, a range of items included as general government assets differs across countries. For example, equity holdings are excluded from government assets in some countries whereas foreign exchange, gold and SDR holdings are considered as assets in the United States and the United Kingdom. For details see *OECD Economic Outlook*, Sources and Methods (<http://www.oecd.org/eco/sources-and-methods>).

1. From 1995 onwards housing corporation shares are no longer classified as financial assets.

2. Includes the debt of the Inherited Debt Fund from 1995 onwards.

3. Includes the debt of the Japan Railway Settlement Corporation and the National Forest Special Account from 1998 onwards.

Note: Competitiveness-weighted relative consumer prices in dollar terms. Competitiveness weights take into account the structure of competition in both export and import markets of the manufacturing sector of 42 countries. An increase in the index indicates a real effective appreciation and a corresponding deterioration of the competitive position. For details on the method of calculation see Durand, M., C. Maddaschi and F. Terribile (1998), "Trends in OECD Countries' International Competitiveness: The Influence of Emerging Market Economies", *OECD Economics Department Working Papers*, No. 195. See also *OECD Economic Outlook* Sources and Methods (<http://www.oecd.org/eco/sources-and-methods>).

Note: Regional aggregates are calculated inclusive of intra-regional trade. Export performance is the ratio between export volumes and export markets for total goods and services. The calculation of export markets is based on a weighted average of import volumes in each exporting country's markets, with weights based on trade flows in 2000.

1. Dynamic Asia includes Chinese Taipei; Hong Kong, China; Indonesia; Malaysia; Philippines; Singapore and Thailand.

2. Data prior to 1996 are OECD estimates.

Note: The balance-of-payments data in this table are based on the concepts and definition of the International Monetary Fund, Fifth Balance of Payments Manual.

1. Including Luxembourg until 1994.

2. Breaks between 1998 and 1999 for Greece and between 1995 and 1996 for Portugal, reflecting change in methodology to the International Monetary Fund, Fifth Balance of Payments Manual (capital transfers from European Union are excluded from the current account).

Note: Historical data for the OECD area are aggregates of reported balance-of-payments data of each individual country. Because of various statistical problems as well as a large number of non-reporters among non-OECD countries, trade and current account balances estimated on the basis of these countries' own balance-of-payments records may differ from corresponding estimates shown in this table.

1. National accounts basis for OECD countries and balance-of-payments basis for the non-OECD regions.

2. Dynamic Asia includes Chinese Taipei; Hong Kong, China; Indonesia; Malaysia; Philippines; Singapore and Thailand.

3. Data prior to 1995 are OECD estimates.

4. Reflects statistical errors and asymmetries. Given the very large gross flows of world balance-of-payments transactions, statistical errors and asymmetries easily give rise to world totals (balances) that are significantly different from zero.

Note: Regional aggregates are calculated inclusive of intra-regional trade. The calculation of export markets is based on a weighted average of import volumes in each exporting country's market, with weights based on goods and services trade flows in 2000.

1. Dynamic Asia includes Chinese Taipei; Hong Kong, China; Indonesia; Malaysia; Philippines; Singapore and Thailand.

Note: The adoption of new national account systems, SNA93 or ESA95, has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. Moreover, some countries are using chain-weighted price indices to calculate real GDP and expenditures components. See Table "National Account Reporting Systems and Base-years" at the beginning of the Statistical Annex and *OECD Economic Outlook Sources and Methods* (<http://www.oecd.org/eco/sources-and-methods>).

1. Year-on-year growth rates in per cent.

Note: The adoption of new national account systems, SNA93 or ESA95, has been proceeding at an uneven pace among OECD member countries, both with respect to variables and the time period covered. As a consequence, there are breaks in many national series. Moreover, some countries are using chain-weighted price indices to calculate real GDP and expenditures components. See Table "National Account Reporting Systems and Base-years" at the beginning of the Statistical Annex and *OECD Economic Outlook Sources and Methods* (<http://www.oecd.org/eco/sources-and-methods>).

1. Year-on-year growth rates in per cent.

2. Includes intra-regional trade.

1. Assets and liabilities are amounts outstanding at the end of the period, in per cent of nominal disposable income. Vertical lines between columns indicate breaks in the series due to changes in the definitions or accounting systems. Figures after the most recent breaks in the series are based on the UN System of National Accounts 1993 (SNA 93) and, more specifically, for European Union countries, on the corresponding European System of Accounts 1995 (ESA 95).

Households include non-profit institutions serving households. Net wealth is defined as non-financial and financial assets minus liabilities; net financial wealth is financial assets minus liabilities. Non-financial assets consist mainly of dwellings and land. For Canada, Germany, Italy and the United States, data also include durable goods. For Canada, France, Japan, the United Kingdom and the United States, data also include non-residential buildings and fixed assets of unincorporated enterprises and of non-profit institutions serving households, although coverage and valuation methods may differ. Financial assets comprise currency and deposits, securities other than shares, loans, shares and other equity, insurance technical reserves; and other accounts receivable/payable. Not included are assets with regard to social security pension insurance schemes. Equities comprise shares and other equity, including quoted, unquoted and mutual fund shares. See also *OECD Economic Outlook Sources and Methods* (<http://www.oecd.org/eco/sources-and-methods>).

2. Fiscal year data.

Note: Central government financial balances include one-off revenues from the sale of mobile telephone licenses.

1. The 1995 deficit would rise by 6.5 percentage points of GDP if it included the debt taken on this year from the Inherited Debt Funds.

2. Data are only available for fiscal years beginning April 1 of the year shown. The 1998 deficit would rise by 5.3 percentage points of GDP if it included the central government's assumption of the debt of the Japan Railway Settlement Corporation and the National Forest Special Account.

Note: For the period before 2006, gross debt figures are provided by Eurostat, the Statistical Office of the European Communities, unless more recent data are available, while GDP figures are provided by National Authorities. This explains why these ratios can differ significantly from the ones published by Eurostat. The 2006 to 2007 debt ratios are in line with the OECD projections for general government gross financial liabilities and GDP. See *OECD Economic Outlook Sources and Methods* (<http://www.oecd.org/eco/sources-and-methods>).

Kästen	
I.1 Wie schwach sind die Unternehmensinvestitionen in diesem Zyklus?	4
I.2 Warum sind die Anleiherenditen so niedrig?	16
I.3 Nähern sich die Wohnimmobilienpreise einem historischen Höchststand?	18
I.4 Wirtschaftspolitische und sonstige Annahmen für die Projektionen	24
I.5 Wie wirkt sich die Globalisierung auf die Inflation aus?	28

I.6	Welchen Beitrag leistete die Fiskalpolitik zur Stabilisierung konjunktureller Schwankungen?	34
I.7	Dem mittelfristigen Referenzszenario zu Grunde liegende Annahmen	52
III.1	Den Projektionen zu Grunde liegende exogene Hypothesen	184

Tabellen (englische Fassung)

I.1	The expansion should continue	1
I.2	Real wages lag productivity	3
I.3	Labour markets are recovering	6
I.4	Strong GDP growth in the first two quarters of 2006	22
I.5	Strong world trade growth and widening external imbalances	23
I.6	The upswing is broadening	25
I.7	Not enough fiscal consolidation	33
I.8	Trend growth decomposition with revised method	46
I.9	Medium-term reference scenario summary	49
I.10	Fiscal trends in the medium-term reference scenario	50
I.11	Growth in total economy potential output and its components	51
III.1	Summary projections of public health and long-term care spending	182
III.2	Decomposition of projected GDP per capita	185

Abbildungen (englische Fassung)

I.1	The expansion has recently become less lopsided	3
I.2	Energy markets are hot	8
I.3	Imports of oil producers lag exports	10
I.4	Current account imbalances are growing and official reserves soaring	11
I.5	Financial conditions are still easy	15
I.6	Business confidence is improving	21
I.7	Most policy rates are moving up	27
I.8	The link between local demand pressure and inflation is weakening	27
I.9	Factors shaping core inflation	30
I.10	Headline and underlying inflation are converging	31
I.11	Fiscal targets keep moving	36
I.12	Total economy potential and output gaps	40
III.1	Total increase in health and long-term care spending by country, 2005-2050	183
III.2	Demography effects on health care spending	186
III.3	Demography effects on long-term care spending	187

Short-term interest rate														
United States	3.5	5.1	5.1	5.0	5.2	5.3	5.3	5.1	5.1	5.0	4.3	5.3	5.0	
Japan	0.0	0.1	0.7	0.1	0.1	0.1	0.3	0.6	0.9	1.1	0.0	0.1	1.1	
Euro area	2.2	2.7	3.4	2.6	2.7	2.9	3.2	3.4	3.5	3.7	2.3	2.9	3.7	

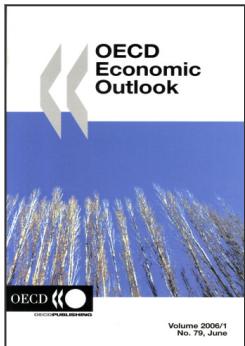

Note: Real GDP growth, inflation (measured by the increase in the GDP deflator) and world trade growth (the arithmetic average of world merchandise import and export volumes) are seasonally and working-day-adjusted annual rates. The "fourth quarter" columns are expressed in year-on-year growth rates where appropriate and in levels otherwise. The unemployment rate is in per cent of the labour force while the current account balance is in per cent of GDP. The cyclically-adjusted fiscal balance is in per cent of potential GDP. Interest rates are for the United States: 3-month eurodollar deposit; Japan: 3-month certificate of deposits; euro area: 3-month interbank rate.

Assumptions underlying the projections include:

- no change in actual and announced fiscal policies;
- unchanged exchange rates as from 4 May 2006; in particular 1\$ = 113.50 yen and 0.79 euro.

The cut-off date for other information used in the compilation of the projections is 17 May 2006.
