

**SUMMARY OF WORKING GROUP DISCUSSION ON
SUBCRITICAL SYSTEMS AND INTERFACE ENGINEERING**

Chair: W. Gudowski

What are the expected results of our discussion?

- Understanding where we are internationally with ADS programmes and to clarify the details.
- Understanding to where different projects are heading.
- Finding synergies and benefits in international collaboration and a good balance between COMPETITION and COLLABORATION.
- Agreement on what message we should convey to nuclear utilities and to the nuclear community as a whole on ADS and P&T issues.
- Some important technical issues not yet answered:
 - What is the maximum beam power accepted by a reactor? (Reactor perspective is not only beam trips!)
- Advise OECD/NEA on priorities in its P&T and ADS activities.

Good starting point – conclusions of M. Salvatores' presentation regarding putting an international perspective on the future of ADS

“The perceived role of P&T has evolved from an optional strategy aiming to reduce the burden on deep geological storage, to an integral component of future nuclear systems. In this new perspective, ‘transmutation’ is achieved in an optimum manner in a fast neutron reactor, with the homogeneous recycling of not separated TRU.”

The main reactions to this statement are:

- The perception by the geological disposal community is not in line with the statement especially perceived in EURADWASTE 2004. P&T is perceived for the moment as a burden for geological disposal. **Thus, there is a real need for communication between the two communities.**
- In an electricity market open for competition it will be difficult to make a dirty fuel cycle acceptable to the utilities. **This will be jeopardizing the competitiveness of nuclear electricity generation** (one of the Gen. IV criteria).
- Multiple recycling needed within P&T is unacceptable to utilities as considered in the homogeneous burning.
- Transmutation is achieved in an optimum manner in a fast neutron system, be it a critical reactor or an ADS system.

“Specialized devices, like ADS, can have a role in a transition scenario between the present LWR-dominated to a future FR-dominated situation.”

The main reactions to this statement are:

- ADS is a dedicated system for waste burning but not simply for the transition period between the LWR era and the FR-dominated era. **ADS will be a dedicated waste burner also when the FR will be deployed for economical reasons.**
- Even if ADS will be for a transition period, this will be a long one (**around one century**).
- Why such a huge effort for a transition period if limited to 20 to 30 years as claimed by the Gen. IV community?

“In any case, ADS deployment can hardly be considered by a single country in isolation and a ‘regional’ approach is needed, where countries with rather different policies in terms of nuclear power development can join efforts to develop shared facilities.”

The main reactions to this statement are:

- **This is true at the Asian level as a Japan-China-Korea initiative** has begun to join the effort related to the R&D support programme for ADS and even to join the effort for ADS facilities in the J-PARC ADS part (the latest statement on the wishes of Japan; enlargement to world collaboration).
- A joint effort in R&D support can also be achieved through the ISTC initiatives.
- This is true at European level under the EC FP (4, 5, 6) programmes for R&D support but a step further would be needed in terms of realisation.

Target issues

“The best solution issue – window or windowless.”

The main reactions to this statement are:

- Windowless can be a favoured design under the condition that after a hydraulic demonstration and a vacuum interface compatibility demonstration, the realisation of an experimental testing is realised.
- Scale 1/1 experiment is needed.
- If windowless can be accepted, one should not avoid a cold window to protect the accelerator from eventual contamination.
- The technology of cold windows, even used in other applications, needs to be demonstrated at the high-power proton beams considered for ADS accelerators.

- An assessment of the maximum power acceptable in the windowless design should be established.
- The optimum acceptable proton energy for ADS application is 600 to 800 MeV; thus one cannot relax more on the energy to avoid high currents.

“Can we envisage an experiment in the near future to help us resolve this issue? A WINDOWLESS MEGAPIE? Where and when?”

The main reactions to this statement are:

- Yes such an experiment should be prepared and performed.
- An attempt was done during the FP6 project IP EUROTRANS but due to budget shorting this is not taken in the present programme.
- PSI and SCK•CEN are thinking about such an experiment.

“Too little work has been done on the consequences of a window break.”

The main reactions to this statement are:

- For the first time, work on this topic has been reported by JAERI and the group recommends an increase in this effort.

TABLE OF CONTENTS

Foreword	3
Executive Summary.....	11
Welcome.....	15
<i>D-S. Yoon</i> Congratulatory Address	17
<i>I-S. Chang</i> Welcome Address	19
<i>G.H. Marcus</i> OECD Welcome	21
GENERAL SESSION: ACCELERATOR PROGRAMMES AND APPLICATIONS.....	23
CHAIRS: B-H. CHOI, R. SHEFFIELD	
<i>T. Mukaiyama</i> Background/Perspective.....	25
<i>M. Salvatores</i> Accelerator-driven Systems in Advanced Fuel Cycles	27
<i>S. Noguchi</i> Present Status of the J-PARC Accelerator Complex	37
<i>H. Takano</i> R&D of ADS in Japan.....	45
<i>R.W. Garnett, A.J. Jason</i> Los Alamos Perspective on High-intensity Accelerators.....	57
<i>J-M. Lagniel</i> French Accelerator Research for ADS Developments.....	69
<i>T-Y. Song, J-E. Cha, C-H. Cho, C-H. Cho, Y. Kim, B-O. Lee, B-S. Lee, W-S. Park, M-J. Shin</i> Hybrid Power Extraction Reactor (HYPER) Project	81

<i>V.P. Bhatnagar, S. Casalta, M. Hugon</i>	
Research and Development on Accelerator-driven Systems in the EURATOM 5 th and 6 th Framework Programmes.....	89
<i>S. Monti, L. Picardi, C. Rubbia, M. Salvatores, F. Troiani</i>	
Status of the TRADE Experiment.....	101
<i>P. D'hondt, B. Carluec</i>	
The European Project PDS-XADS “Preliminary Design Studies of an Experimental Accelerator-driven System”.....	113
<i>F. Groeschel, A. Cadiou, C. Fazio, T. Kirchner, G. Laffont, K. Thomsen</i>	
Status of the MEGAPIE Project.....	125
<i>P. Pierini, L. Burgazzi</i>	
ADS Accelerator Reliability Activities in Europe	137
<i>W. Gudowski</i>	
ADS Neutronics	149
<i>P. Coddington</i>	
ADS Safety	151
<i>Y. Cho</i>	
Technological Aspects and Challenges for High-power Proton Accelerator-driven System Application	153
TECHNICAL SESSION I: ACCELERATOR RELIABILITY.....	163
CHAIRS: A. MUELLER, P. PIERINI	
<i>D. Vandeplassche, Y. Jongen (for the PDS-XADS Working Package 3 Collaboration)</i>	
The PDS-XADS Reference Accelerator	165
<i>N. Ouchi, N. Akaoka, H. Asano, E. Chishiro, Y. Namekawa, H. Suzuki, T. Ueno, S. Noguchi, E. Kako, N. Ohuchi, K. Saito, T. Shishido, K. Tsuchiya, K. Ohkubo, M. Matsuoka, K. Sennyu, T. Murai, T. Ohtani, C. Tsukishima</i>	
Development of a Superconducting Proton Linac for ADS	175
<i>C. Miélot</i>	
Spoke Cavities: An Asset for the High Reliability of a Superconducting Accelerator; Studies and Test Results of a $\beta = 0.35$, Two-gap Prototype and its Power Coupler at IPN Orsay	185
<i>X.L. Guan, S.N. Fu, B.C. Cui, H.F. Ouyang, Z.H. Zhang, W.W. Xu, T.G. Xu</i>	
Chinese Status of HPPA Development	195

<i>J.L. Biarrotte, M. Novati, P. Pierini, H. Safa, D. Uriot</i> Beam Dynamics Studies for the Fault Tolerance Assessment of the PDS-XADS Linac	203
<i>P.A. Schmelzbach</i> High-energy Beam Transport Lines and Delivery System for Intense Proton Beams	215
<i>M. Tanigaki, K. Mishima, S. Shiroya, Y. Ishi, S. Fukumoto, S. Machida, Y. Mori, M. Inoue</i> Construction of a FFAG Complex for ADS Research in KURRI	217
<i>G. Ciavola, L. Celona, S. Gammino, L. Andò, M. Presti, A. Galatà, F. Chines, S. Passarello, XZh. Zhang, M. Winkler, R. Gobin, R. Ferdinand, J. Sherman</i> Improvement of Reliability of the TRASCO Intense Proton Source (TRIPS) at INFN-LNS	223
<i>R.W. Garnett, F.L. Krawczyk, G.H. Neuschafer</i> An Improved Superconducting ADS Driver Linac.....	235
<i>A.P. Durkin, I.V. Shumakov, S.V. Vinogradov</i> Methods and Codes for Estimation of Tolerance in Reliable Radiation-free High-power Linac	245
<i>S. Henderson</i> Status of the Spallation Neutron Source Accelerator Complex	257
TECHNICAL SESSION II: TARGET, WINDOW AND COOLANT TECHNOLOGY.....	265
CHAIRS: X. CHENG, T-Y. SONG	
<i>Y. Kurata, K. Kikuchi, S. Saito, K. Kamata, T. Kitano, H. Oigawa</i> Research and Development on Lead-bismuth Technology for Accelerator-driven Transmutation System at JAERI	267
<i>P. Michelato, E. Bari, E. Cavalieri, L. Monaco, D. Sertore, A. Bonucci, R. Giannantonio, L. Cinotti, P. Turroni</i> Vacuum Gas Dynamics Investigation and Experimental Results on the TRASCO ADS Windowless Interface	279
<i>J-E. Cha, C-H. Cho, T-Y. Song</i> Corrosion Tests in the Static Condition and Installation of Corrosion Loop at KAERI for Lead-bismuth Eutectic	291
<i>P. Schuurmans, P. Kupschus, A. Verstrepen, J. Cools, H. Aït Abderrahim</i> The Vacuum Interface Compatibility Experiment (VICE) Supporting the MYRRHA Windowless Target Design	301

<i>C-H. Cho, Y. Kim, T-Y. Song</i>	
Introduction of a Dual Injection Tube for the Design of a 20 MW Lead-bismuth Target System.....	313
<i>H. Oigawa, K. Tsujimoto, K. Kikuchi, Y. Kurata, T. Sasa, M. Umeno, K. Nishihara, S. Saito, M. Mizumoto, H. Takano, K. Nakai, A. Iwata</i>	
Design Study Around Beam Window of ADS.....	325
<i>S. Fan, W. Luo, F. Yan, H. Zhang, Z. Zhao</i>	
Primary Isotopic Yields for MSDM Calculations of Spallation Reactions on ^{280}Pb with Proton Energy of 1 GeV	335
<i>N. Tak, H-J. Neitzel, X. Cheng</i>	
CFD Analysis on the Active Part of Window Target Unit for LBE-cooled XADS.....	343
<i>T. Sawada, M. Orito, H. Kobayashi, T. Sasa, V. Artisyuk</i>	
Optimisation of a Code to Improve Spallation Yield Predictions in an ADS Target System.....	355
TECHNICAL SESSION III: SUBCRITICAL SYSTEM DESIGN AND ADS SIMULATIONS.....	363
CHAIRS: W. GUDOWSKI, H. OIGAWA	
<i>T. Misawa, H. Unesaki, C.H. Pyeon, C. Ichihara, S. Shiroya</i>	
Research on the Accelerator-driven Subcritical Reactor at the Kyoto University Critical Assembly (KUCA) with an FFAG Proton Accelerator.....	365
<i>K. Nishihara, K. Tsujimoto, H. Oigawa</i>	
Improvement of Burn-up Swing for an Accelerator-driven System	373
<i>S. Monti, L. Picardi, C. Ronsivalle, C. Rubbia, F. Troiani</i>	
Status of the Conceptual Design of an Accelerator and Beam Transport Line for Trade.....	383
<i>A.M. Degtyarev, A.K. Kalugin, L.I. Ponomarev</i>	
Estimation of some Characteristics of the Cascade Subcritical Molten Salt Reactor (CSMSR)	393
<i>F. Roelofs, E. Komen, K. Van Tichelen, P. Kupschus, H. Aït Abderrahim</i>	
CFD Analysis of the Heavy Liquid Metal Flow Field in the MYRRHA Pool.....	401
<i>A. D'Angelo, B. Arien, V. Sobolev, G. Van den Eynde, H. Aït Abderrahim, F. Gabrielli</i>	
Results of the Second Phase of Calculations Relevant to the WPPT Benchmark on Beam Interruptions.....	411

TECHNICAL SESSION IV: SAFETY AND CONTROL OF ADS 423**CHAIRS: J-M. LAGNIEL, P. CODDINGTON**

*P. Coddington, K. Mikityuk, M. Schikorr, W. Maschek,
R. Sehgal, J. Champigny, L. Mansani, P. Meloni, H. Wider*
Safety Analysis of the EU PDS-XADS Designs..... 425

*X-N. Chen, T. Suzuki, A. Rineiski, C. Matzerath-Boccaccini,
E. Wiegner, W. Maschek*
Comparative Transient Analyses of Accelerator-driven Systems
with Mixed Oxide and Advanced Fertile-free Fuels..... 439

P. Coddington, K. Mikityuk, R. Chawla
Comparative Transient Analysis of Pb/Bi
and Gas-cooled XADS Concepts 453

B.R. Sehgal, W.M. Ma, A. Karbojian
Thermal-hydraulic Experiments on the TALL LBE Test Facility 465

K. Nishihara, H. Oigawa
Analysis of Lead-bismuth Eutectic Flowing into Beam Duct..... 477

P.M. Bokov, D. Ridikas, I.S. Slessarev
On the Supplementary Feedback Effect Specific
for Accelerator-coupled Systems (ACS)..... 485

W. Haeck, H. Aït Abderrahim, C. Wagemans
 K_{eff} and K_s Burn-up Swing Compensation in MYRRHA 495

TECHNICAL SESSION V: ADS EXPERIMENTS AND TEST FACILITIES..... 505**CHAIRS: P. D'HONDT, V. BHATNAGAR**

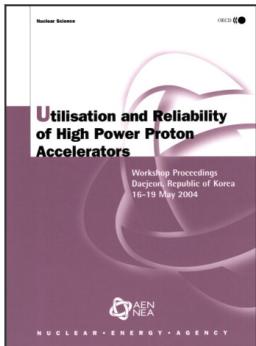

*H. Oigawa, T. Sasa, K. Kikuchi, K. Nishihara, Y. Kurata, M. Umeno,
K. Tsujimoto, S. Saito, M. Futakawa, M. Mizumoto, H. Takano*
Concept of Transmutation Experimental Facility 507

M. Hron, M. Mikisek, I. Peka, P. Hosnedl
Experimental Verification of Selected Transmutation Technology and Materials
for Basic Components of a Demonstration Transmuter with Liquid Fuel
Based on Molten Fluorides (Development of New Technologies for
Nuclear Incineration of PWR Spent Fuel in the Czech Republic)..... 519

Y. Kim, T-Y. Song
Application of the HYPER System to the DUPIC Fuel Cycle..... 529

M. Plaschy, S. Pelloni, P. Coddington, R. Chawla, G. Rimpault, F. Mellier
Numerical Comparisons Between Neutronic Characteristics of MUSE4
Configurations and XADS-type Models..... 539

<i>B-S. Lee, Y. Kim, J-H. Lee, T-Y. Song</i>	
Thermal Stability of the U-Zr Fuel and its Interfacial Reaction with Lead	549
SUMMARIES OF TECHNICAL SESSIONS	557
<i>CHAIRS: R. SHEFFIELD, B-H. CHOI</i>	
<i>Chairs: A.C. Mueller, P. Pierini</i>	
Summary of Technical Session I: Accelerator Reliability	559
<i>Chairs: X. Cheng, T-Y. Song</i>	
Summary of Technical Session II: Target, Window and Coolant Technology	565
<i>Chairs: W. Gudowski, H. Oigawa</i>	
Summary of Technical Session III: Subcritical System Design and ADS Simulations.....	571
